MOTOMCO MOLE KILLER

MIMICS A MOLE'S NATURAL FOOD SOURCE, THE GRUB

This Product May Only Be Used To Control Moles in Manual, Below-Ground Applications.

READY-TO-USE

4 PLACEMENTS (6 Grubs - 3 Per Placement)

Net Wt: 0.7 oz (20 g)

Storage:
Store Upright In A Cool Dry Place • Store Below 100ºF

IF SWALLOWED:
Call a poison control center, doctor, or 1-877-854-2494 immediately for treatment advice.

Have person sip a glass of water if able to swallow.

IF IN EYES:
Wash out with water for 15 minutes. If irritation continues, see a doctor.

IF ON SKIN:
Wash with soap and water at least 15 minutes. If irritation continues, see a doctor.

DIRECTIONS FOR USE

Verify Active Runways

How to Use Motomco Mole Killer

Bait Active Runways

Determine Baiting Results

Motomco Mole Killer is extremely toxic to mammals and birds. Dogs and other predatory and scavenging mammals and birds might be exposed if the product is not used as directed. Avoid all contact with the product and do not allow the product to enter streams, ponds, or other surface waters. Do not contaminate feed or water for domestic animals or wildlife. Improper use may cause serious harm. Do not use near or on food or feed sources for human or animal consumption. This product is extremely toxic to mammals and birds. Consult label for complete treatment and handling instructions.

Moles construct deeper tunnels that are not visible formed when dirt is pushed to the surface when moles construct these tunnels. To locate deep tunnels, push a probe, such as a broom handle, into the soil between mounds. When the probe enters a tunnel, the resistance on the probe will decrease rapidly. Mark opened tunnels and revisit them 48 to 72 hours later. Runways that have had holes resealed within 72 hours should be baited.

To bait deep tunnels, drop two MOTOMCO MOLE KILLER grubs (one placement) through the probe hole, using the probe to push the grubs are completely in the runway. No parts-solid waste agency for disposal instructions. Never place available. Motomco Mole Killer has been carefully designed to mimic a mole’s most common natural food source - earthworms and grubs. Mole’s dietary requirements are from earthworms and grubs. Moles may consume a lethal dose in a single feeding, but it may take two or more days from the time of bait consumption for moles to die.

This Product May Only Be Used to Control Moles in Manual, Below-Ground Applications.

Moles may consume a lethal dose in a single feeding, but it may take two or more days from the time of bait consumption for moles to die.
Moles do not have a natural food source. Moles may consume a lethal dose in a single feeding, but it may take two or more days from the time of bait consumption for moles to die.

How to Use Motomco Mole Killer

**NOTE:** Must be used underground

1. **Verify Active Runways**

   Use your finger, small wooden dowel or a narrow rod to puncture a hole in the top of subsurface** runways. **NOTE:** Be careful not to crush runway.

2. **Bait Active Runways**

   Make a hole in the top of the runway with a rod slightly larger than the diameter of the bait.

3. **Determine Baiting Results**

   Five to seven days after application, check for mole activity using the same procedure for determining initial activity. Return 48 to 72 hours later and retreat all active runs.

   *Deep tunnel/mound systems require a slightly different procedure. See bottom of package for details.*

**Precautionary Statements**

- **IF SWALLOWED:** Have person sip a glass of water if able to swallow. Do not induce vomiting unless told to do so by the poison control center or doctor.
- **IF ON SKIN:** Wash with plenty of soap and water.
- **RELEASE FROM THE GRUB NATURAL FOOD SOURCE:** The grubs are completely poisoned if they feed upon animals that have eaten this bait. Do not apply directly to water.
- **Prolonged or frequent repeat skin contact may cause allergic reactions in some individuals.**
- **Harmful if swallowed or absorbed through the skin.**
- **Do not get in eyes, on skin, or on clothing.**
- **Avoid breathing** or dust or mist generated from treated areas or baiting materials.
- **Environmental Hazards:** Prolonged or frequent repeat skin contact may cause allergic reactions in some individuals.

Other mole baits have been developed on the premise that moles are similar to rats and mice, when in reality moles are insectivores (insect eaters). Moles construct deeper tunnels that are not visible from the surface. These deep tunnel/mound systems are often marked by a series of conical mounds (piles of dirt) 4 to 12 inches high formed when dirt is pushed to the surface when moles construct these tunnels. To locate deep tunnels, push a probe, such as a rod used to place bait, into the mound. If the probe enters the mound to a depth of 4 inches without hitting loose dirt, the mound likely contains bait and thus a mole. To ensure the bait is placed in the deep tunnel/mound system, make a hole in the mound using a rod slightly larger than the diameter of the bait used. The bait should be placed in the mound, and the mound then resealed using soil or sod to form a mound-like structure. If the probe does not enter the mound to a depth of 4 inches without hitting loose dirt, the mound likely contains a mole tunnel. To ensure the bait is placed in the mole tunnel, make a hole in the mound using a rod slightly smaller than the diameter of the bait used. The bait should be placed in the mole tunnel, and the mound then resealed using soil or sod to form a mound-like structure. If the probe does not enter the mound to a depth of 4 inches without hitting loose dirt, the mound likely contains a mole tunnel. To ensure the bait is placed in the mole tunnel, make a hole in the mound using a rod slightly smaller than the diameter of the bait used. The bait should be placed in the mole tunnel, and the mound then resealed using soil or sod to form a mound-like structure.

**Mole Killers in Runways:**

- **Main underground runways:** Use your finger, small wooden dowel or a narrow rod to puncture a hole in the top of subsurface runways. **NOTE:** Be careful not to crush runway.

> **SUBSURFACE** runways can be verified by probing the top of the runway with a rod slightly larger than the diameter of the bait. The rod should enter the runway to a depth of 4 inches without hitting loose dirt. If the rod does not enter the runway to a depth of 4 inches without hitting loose dirt, the runway likely contains a mole tunnel. To ensure the bait is placed in the mole tunnel, make a hole in the runway using a rod slightly smaller than the diameter of the bait used. The bait should be placed in the mole tunnel, and the runway then resealed using soil or sod to form a runway-like structure. If the rod hits loose dirt, the runway likely contains a mole tunnel. To ensure the bait is placed in the mole tunnel, make a hole in the runway using a rod slightly smaller than the diameter of the bait used. The bait should be placed in the mole tunnel, and the runway then resealed using soil or sod to form a runway-like structure.

**Determine Baiting Results:**

- **Five to seven days** after application, check for mole activity using the same procedure for determining initial activity. Return 48 to 72 hours later and retreat all active runs.

**Precautionary Statements:**

- **Release from the grub natural food source:** The grubs are completely poisoned if they feed upon animals that have eaten this bait. Do not apply directly to water.
- **Prolonged or frequent repeat skin contact may cause allergic reactions in some individuals.**
- **Harmful if swallowed or absorbed through the skin.**
- **Do not get in eyes, on skin, or on clothing.**
- **Avoid breathing** or dust or mist generated from treated areas or baiting materials.
- **Environmental Hazards:** Prolonged or frequent repeat skin contact may cause allergic reactions in some individuals.
FOOD SOURCE, THE GRUB MIMICS A MOLE’S NATURAL FOOD SOURCE, THE GRUB.

Motomco Mole Killer

500 mg (20 g) Moles consume a lethal dose in a single feeding, but it may take two or more days from the time of bait consumption for moles to die. All properties are susceptible to recolonization. However, properties near woods, fields, streams/lakes, etc. may be more susceptible.

This Product May Only be Used to Control Moles in Manual, Below-Ground Applications.

To the extent consistent with applicable law, the seller makes no warranty, expressed or implied, concerning the

WARRANTY:

of subsurface runways. Be careful not to crush runways. Mark opened runways and revisit them 48 to 72 hours later. Runways that have had holes exposed.

To bait deep tunnels, drop two MOTOMCO MOLE KILLER grubs (one placement) through the probe hole, using the probe to push the bait completely into the tunnel. Cover the hole with a piece of sod, a small rock or a piece of newspaper to allow for visual inspection. If not possible, cover placement) into the runway with a small amount of dirt to exclude light. Repeat bait application every 5 to 10 feet of each active subsurface runway.

Five to seven days after application, check for mole activity using the same procedure for determining tunnel location. Return 48 to 72 hours later and retreat all active tunnel systems.

** Deep tunnel/mound systems require a slightly different procedure. See bottom of package for details.

NOTE: Must be used underground. Rattling or other such movements may attract moles. If moles eat a lethal dose, they become very active and may be attracted to the application area. This may cause additional local damage.

PRECAUTIONARY STATEMENTS

TREATMENT FOR PET POISONING

1. IF SWALLOWED: Have person drink plenty of water. Induce vomiting if instructed by the poison control center or doctor. Call local poison control center (1-800-222-1222) for emergency assistance. DO NOT induce vomiting unless told to do so by the poison control center or doctor.

2. IF IN EYES: Wash with plenty of water. Call local poison control center (1-800-222-1222) for emergency assistance.

3. IF ON SKIN: Wash with soap and water. Call local poison control center (1-800-222-1222) for emergency assistance.

For a complete discussion of the uses, uses, and uses of this product, see the use directions on the label.

PRECAUTIONARY STATEMENTS

This product may only be applied at the use sites and by the application methods indicated on this label. This product may only be used in lawns and around homes to control eastern moles (Scapanus spp.) or (Conylura cristata). Read this entire label and follow all use directions and use precautions. See bottom panel for additional precautionary statements.

How To Use Motomco Mole Killer

1. How to Use a Manual Method

2. How to Use a Mechanical Method

3. How to Use a Subsurface Method

STORAGE AND DISPOSAL

Store Upright In A Cool Dry Place • Store Below 100ºF • KEEP OUT OF REACH OF CHILDREN • Do not contaminate water, food or feed by storage or disposal. Store only in original container in a cool, dry place inaccessible to children and pets. Keep containers closed and store away from other chemicals. Dispose of product container and unused or spoiled product as specified on label. Nonrefillable container. Do not reuse. Nonrefillable container. Do not contaminate water, food or feed by storage or disposal. Place in trash or call your local recycling center to dispose of properly. Nonrefillable container. Do not contaminate water, food or feed by storage or disposal. Place in trash or call your local recycling center to dispose of properly.

How to Use Motomco Mole Killer

Verify Active Runways

Determine baiting results

SELECTION OF TREATMENT AREAS:

Subsurface runways:

When the runway with a small amount of dirt to exclude light. Repeat bait application every 5 to 10 feet of each active subsurface runway.

Subsurface runways:

To achieve maximum effect, MOTOMCO MOLE KILLER should only be placed in areas used habitually by moles for feeding.

Subsurface runways:

Mark opened runways and revisit them 48 to 72 hours later. Runways that have had holes resealed within 72 hours should be baited.

Subsurface runways:

If not possible, cover active runway.

Subsurface runways:

Repeat bait application

Subsurface runways:

Five to seven days after bait application, check for mole activity using the same procedure for determining initial activity. Return 48 to 72 hours later and retreat all active runs.

Subsurface runways:

Moles construct deeper tunnels that are not visible from the surface. These deep tunnels systems are often marked by a series of conical mounds (piles of dirt) 4 to 12 inches high formed when dirt is pushed to the surface when moles construct these tunnels. To locate deep tunnels, push a probe, such as a broom handle, into the soil between mounds. When the probe enters a tunnel, the resistance on the probe will decrease rapidly. Mark opened tunnels and revisit them 48 to 72 hours later. Runways that have had holes resealed within 72 hours should be baited.

Subsurface runways:

To bait deep tunnels, drop two MOTOMCO MOLE KILLER grubs (one placement) through the probe hole, using the probe to push the grubs into the tunnel with a rod slightly flexible, and then愿望大

Subsurface runways:

Nonrefillable container. Do not reuse or refill this container. Place in trash or offer for recycling if possible. If not possible, dispose of appropriately.

Storage and Disposal

Warning:

This product is extremely toxic to mammals and birds. Dogs and other predatory and scavenging mammals and birds might be injured or killed if ingesting bait. To prevent such injury or death, keep children and pets away from treated areas.

Non-refillable container. Do not reuse or refill.

Dispose of product container and unused or spoiled product as specified on label.

This product may only be applied at the use sites and by the application methods indicated on this label. This product may only be used in lawns and around homes to control eastern moles (Cryptotrya cristata).

Bait must be applied directly into moles’ burrow systems. This bait must be applied underground in either main underground runways or in subsurface feeding tunnels. This bait may not be used above ground. Wear gloves when bait is handled.

Read this entire label and follow all use directions and use precautions.

Pets out of treated areas. Do NOT use this product above ground.

IF ON SKIN:

Wash thoroughly with soap and water after handling and before eating, drinking, or chewing gum.

IF IN EYES:

Wear gloves when bait is handled.

Wear protective clothing when handling this product.

All properties are susceptible to recolonization. However, properties near woods, fields, streams/lakes, etc., are especially prone to this. These areas will have to be continually monitored and retreated if activity returns.

STORAGE AND DISPOSAL

This product is extremely toxic to mammals and birds. Dogs and other predatory and scavenging mammals and birds might be injured or killed if ingesting bait. To prevent such injury or death, keep children and pets away from treated areas.

Non-refillable container. Do not reuse or refill.

Dispose of product container and unused or spoiled product as specified on label.

This product may only be applied at the use sites and by the application methods indicated on this label. This product may only be used in lawns and around homes to control eastern moles (Cryptotrya cristata).
