Other mole baits have been developed on the premise that moles are similar to rats and mice, when in reality moles are insectivorous (insect eaters). Moles readily consume earthworms, and when available, grubs. In fact, more than 95% of a mole’s average daily dietary requirements are from earthworms and grubs.

Thousands of hours of groundbreaking laboratory and field research have gone into the product you are holding. Tomcat Mole Killer has been carefully designed to mimic a mole’s most common natural food source—earthworms and grubs. Moles may consume a lethal dose in a single feeding, but it may take two or more days from the time of bait consumption for moles to die.
