2883

Active Ingredients:
Glutaraldehyde ................................................. 15.0%
Inert Ingredients ............................................. 85.0%
Total .......................................................... 100.0%

Keep Out of Reach of Children
Danger

First Aid
If Swallowed
- Call poison control center or doctor immediately for treatment advice.
- Do not induce vomiting.
- Do not give anything to drink.

If in Eyes
- Wash immediately and continuously with flowing water for at least 30 minutes.
- Remove contact lenses after the first 5 minutes and continue washing. Obtain prompt medical consultation, preferably from an ophthalmologist.
- Call a poison control center or doctor for further treatment advice.

If on Skin, Clothes
- Take off contaminated clothing.
- Rinse skin immediately with plenty of water for 15-20 minutes.
- Call a poison control center or doctor for further treatment advice.

If Inhaled
- Move person to fresh air.
- If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably by mouth-to-mouth if possible.
- Call a poison control center or doctor for further treatment advice.

HOT LINE NUMBER
Have the product container or label with you when calling a Poison Control Center or doctor or going for treatment. You may also contact INFOTRAC at 1-800-535-6063 for emergency medical treatment information.

NOTE TO PHYSICIAN
Aspiration may cause lung damage. Probable mucosal damage may contraindicate the use of a gastric lavage.

Precautionary Statements
HAZARDS TO HUMANS AND DOMESTIC ANIMALS
Corrosive. Harmful if swallowed. Causes irreversible eye damage. Causes skin irritation. Harmful if absorbed through skin. Prolonged or frequently repeated skin contact may cause allergic skin reactions in some individuals. Harmful if inhaled. Do not swallow. Do not get in eyes, on skin, or clothing. Avoid breathing vapor. Wear goggles, protective clothing, and butyl or nitrile gloves. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco, or using the toilet. Remove and wash contaminated clothing before reuse.

Environmental Hazards
This pesticide is toxic to fish and aquatic organisms. Do not discharge effluent containing this product into lakes, streams, ponds, ditches, wells, oceans or other waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge. Do not discharge effluent containing this product to sewer systems without previously notifying the local sewage treatment plant authority. For guidance contact your State Water Board or Regional Office of the EPA.

Storage and Handling
2883 is incompatible with many commonly used materials of construction such as steel, galvanized iron, aluminum, tin and zinc. 2883 can be stored and handled in tanked phenolicized steel, polyethylene, stainless steel, or reinforced epoxy-plastic equipment. This product freezes at approximately 20.9°F (−8.3°C). Therefore, unless the storage tank is inside or underground, heating and insulation may be required. If heating is needed, exposure to high temperatures should be avoided. For short storage times (up to 1 month), store containers in a cool, dry location. For longer storage periods, preferably at room temperatures, storage temperatures is approximately 80°F (27°C). Stainless steel centrifugal pump is suggested for transfer service. Sand- or sawdust-filled steel- or unlined coils are suitable for tanking and packing. Handle in well-ventilated area. If vapors are irritating to the nose or eyes, special ventilation or respiratory protection (N95/HANNOH/ approved air respirator equipped with organic vapor cartridge) may be required.

Directions for Use
It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Airwashers and Industrial Scrubbing Systems/Recirculating Cooling and Process Water Systems
This product may be used only in industrial air wash systems which have mist-eliminating components. 2883 should be added at the application rates described below, to a water treatment system at a convenient point of uniform mixing such as the basin area. Additional may be made intermittently (slug dose) or continuously. Badly fouled systems can be shocked treated with 2883. Under these conditions, blowdown should be discontinued for up to 24 hours.

2883 can be used in industrial process water systems that contain ultra filtration units and non-medical reverse osmosis membranes (where approved for compatibility by the membrane manufacturer) and associated distribution systems.

Intermittent (Slug Dose) Method:
Initial Dose: When the system is noticeably fouled, apply 4.1 - 8.2 fluid ounces of 2883 per 1,000 gallons of water in the system. Repeat until control is achieved. Subsequent Dose: When microbial control is evident, add 1.8 - 4.1 fluid ounces of 2883 per 100 gallons of water in the system weekly, or as needed to maintain control. Badly fouled systems must be cleaned before treatment is begun.

Continuous Feed Method:
Initial Dose: When the system is noticeably fouled apply 4.1 - 8.2 fluid ounces of 2883 per 100 gallons of water in the system. Subsequent Dose: Maintain this treatment level by starting a continuous feed of 0.6 - 4.1 fluid ounces of 2883 per 100 gallons of water in the system per day. Badly fouled systems must be cleaned before treatment is begun.

Service Water and Auxiliary Systems:
2883 should be used at the same application rates, and in the same manner as described above. It should be added to the system at a point that will allow for uniform mixing throughout the system.

Heat Transfer Systems:
(Depositional Condensers, Daisy Sweetwater Systems, Hydrostactic Sterilizers and Retorts, and Pasteurizers and Warmers and Once-Through Cooling Water Systems.) 2883 should be used at the same application rates, and in the same manner as described above. It should be added to the system at a point of uniform mixing such as a basin area, sump area, or other reservoir or collecting area from which the treated water will be circulated uniformly throughout the system.

Industrial Wastewater Systems:
(Wastewater Systems, Wastewater Sludge and Wastewater Holding Tanks.) 2883 should be added to a wastewater system or sludge at a convenient point of uniform mixing such as the digester. Add 1.4 - 7.2 gallons (1,500 to 7,500 ppm 2883) per 1,500 gallons of wastewater or sludge.

General Preservative Use:
2883 is recommended for use in aqueous or water containing products and systems, including industrial, institutional, and consumer rinse concentrates or products, to control the growth of bacteria and fungi. For effective preservation, add 2883 to the product formulation at a rate of 0.66% to 6.60% (600 to 6,600 ppm) based on the water content of the product (0.69 to 6.8 lbs per 1,000 lbs water content.) Mix uniformly.

Reverse Osmosis Membranes:
For effective preservation of reverse osmosis elements (where approved for compatibility by membrane manufacturer), immersion elements in a tank containing 0.66% to 6.60% 2883. 2883 can be added to in-line recirculating systems for preservation of installed out-of-service reverse osmosis equipment (where approved for compatibility by membrane manufacturer). Add 0.66% to 6.60% 2883 to the tank in the circulation system. Maintain the concentration of 2883 by periodic addition to counteract any system leakage.

Storage and Disposal
Pesticide Disposal:
Do not contaminate water, food, or feed by storage or disposal. Open dumping is prohibited. Pesticide wastes are toxic. Improper disposal of excess pesticide, spray mixture, or rinsate is a violation of Federal law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or your Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional office for guidance.

Container Disposal:
Refillable Containers:
Refill this container with pesticide only. Do not reuse this container for any other purpose. Cleaning the container before final disposal is the responsibility of the person disposing of the container. Cleaning before refilling is the responsibility of the refiller.

For containers 55 gallons and smaller:
To clean the container prior to refilling or disposal, use a triple rinse wash as follows. Empty the remaining contents from this container into application equipment or a mix tank. Fill the container about 10 percent full with water. Agitate vigorously. Pour or pump rinse into application equipment or a mix tank or store rinse for later use or disposal. Repeat this rinsing procedure two more times.

Do not discharge rinse containing this product unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge. Do not discharge rinse containing this product into sewers or other waterways without prior approval from the local sewage treatment plant authority. For guidance contact your State Water Board or Regional Office of the EPA.

Batch Code:
Manufactured by: Watercare Industrial Services, Inc.
3755 Truman Street
Washougal, WA 98671
