Aqua Balance®
Blue S.I. Calcium
Hypochlorite Tablets

ACTIVE INGREDIENT:
Calcium Hypochlorite ................................................... 66%
OTHER INGREDIENTS: ............................................................ 32%
TOTAL ............................................................. 100%
Minimum 65% Available Chlorine

KEEP OUT OF REACH OF CHILDREN.
DANGER

Do not mix with other chemicals. Do not mix with stabilized chlorine tablets that are typically white or other pool chemicals. Do not use with stabilized chlorine or bromine tablet chemical feeder. Mixing could cause a fire or explosion. Use only with other Aqua Balance Blue S.I. Calcium Hypochlorite Tablets. Do not add water to product - Add product to water.

See additional Precautionary Statements.

Erodes slowly to deliver long lasting uniform chlorine protection. Convenient, easy to use with the Aqua Balance Chlorinator 290 H. No build-up of stabilizer (cyanuric acid). Does not lower pH or destroy total alkalinity. Colored blue for safety. Does not contain stabilizer. One tablet treats 10,000 gallons of water for up to seven days.

PRECAUTIONARY STATEMENTS
HAZARDS TO HUMANS AND DOMESTIC ANIMALS

DANGER Highly Corrosive. Causes irreversible eye and skin damage. Do not get in eyes, on skin, or on clothing. Wear goggles or face shield and rubber gloves when handling. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, or using tobacco. Remove and wash contaminated clothing and shoes before reuse. May be fatal if swallowed. Irritating to nose and throat. Avoid breathing dust.

FIRST AID
If in eyes, hold eye open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye. Call a poison control center or doctor for treatment advice.
If on skin or clothing, take off contaminated clothing. Rinse skin immediately for plenty of water for 15-20 minutes. Call a poison control center or doctor for treatment advice.
If swallowed, call a poison control center or doctor immediately for treatment advice. Have person sip a glass of water if able to swallow. Do not induce vomiting unless told to do so by the poison control center or doctor. Do not give anything by mouth to an unconscious person.
If inhaled, move person to fresh air. If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably by mouth-to-mouth, if possible. Call a poison control center or doctor for treatment advice.

Note to physician, probable nasal damage may contraindicate the use of gastric lavage.

FOR EMERGENCY MEDICAL INFORMATION IN USA OR CANADA,
CALL: 1-800-329-0026.
FOR EMERGENCY MEDICAL INFORMATION WORLDWIDE,
CALL: 1-651-222-5352 (IN THE USA).

Have the product container or label with you when calling a poison control center or doctor, or going for treatment.

ENVIRONMENTAL HAZARDS:
This pesticide is toxic to fish and aquatic organisms. Do not discharge effluent containing this product into lakes, streams, ponds, estuaries, oceans, or other waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge. Do not discharge effluent containing this product to sewer systems without previously notifying the local sewage treatment plant authority. For guidance contact your State Water Board or Regional Office of the EPA.
PHYSICAL AND CHEMICAL HAZARDS:
Strong oxidizing agent! Mix only with water. Never add water to product. Always add product to large quantities of water. Use only a clean, dry utensil made of metal or plastic each time product is taken from the container. Do not mix with any other chemicals. Do not add this product to any dispensing device containing remnants of any other product. Such use may cause violent reaction leading to fire or explosion. Contamination with moisture, acids, organic matter, other chemicals, or easily combustible materials such as petroleum or paint products may start a chemical reaction with generation of heat, liberation of hazardous gases and possible generation of a fire or explosion. In case of contamination or decomposition, do not reuse container. If possible, isolate container in open air or well ventilated area. Flood with large volumes of water, if necessary.

DIRECTIONS FOR USE:
It is a violation of Federal law to use this product in a manner inconsistent with its labeling. How to adjust the Aqua Balance Blue S.I. Calcium Hypochlorite Tablets: The Aqua Balance Blue S.I. Calcium Hypochlorite Tablets are designed to be dispersed using the Aqua Balance Chlorinator N-290. To decrease tablet delivery rate: Reduce water flow through the chlorinator. To increase tablet delivery rate: Increase water flow through the chlorinator. Do not throw the tablets directly into the pool or allow tablets to contact plastic or steel pool linings. Regular treatment for pools in use: Maintain pool water parameters in the ranges recommended below or at levels required by location regulations. Obtain and make use of a pool test kit to measure pH, free chlorine residual, total alkalinity, water hardness, and cyanuric acid concentration.

Parameter
pH
Free chlorine residual
Total alkalinity as CaCO3
Stabilizers (cyanuric acid)
Water hardness as CaCO3

Test Frequency Recommended level
Daily 7.2 to 7.6
Daily 1 to 3 ppm
Weekly 80-100 ppm
Monthly 40-30 ppm
Monthly 200 ppm minimum

Initial chlorination:
Begin continuous operation of your recirculation equipment. Balance the water by making certain the pool water parameters for pH, total alkalinity and water hardness are at their proper levels. Check and adjust stabilizer to proper level. Shock treat the pool. Follow label directions of the product used. Repeat the treatment until minimum 1 ppm free chlorine has been established. Do not enter the water until the free chlorine residual is less than 4 ppm. Begin routine chlorination.

Routine chlorination:
Maintain total alkalinity, pH, water hardness and stabilizer concentration at their proper settings. Fill chlorinator with Aqua Balance Blue S.I. Calcium Hypochlorite Tablets. Adjust flow control valve to initial setting. Adjust tablet delivery, as needed, to maintain a 1-3 ppm free available chlorine residual. (Refer to the Aqua Balance Chlorinator N-290 Instruction Manual). Actual number of Aqua Balance Blue S.I. Calcium Hypochlorite Tablets and flow adjustments required to maintain the desired free chlorine residual will vary with the amount of pool water, sunlight, water temperature, bather load, stabilizer concentration and other factors. Use a DPD test kit daily to determine and maintain the proper free chlorine residual. Do not use an OTO test kit.

Helpful aids in swimming pool care:
Maintaining the proper pH, total alkalinity and water hardness is necessary to obtain proper water balance and help avoid problems such as cloudy water, scaling, corrosion and swimmer discomfort. Stabilizers such as cyanuric acid slow down the rate at which chlorine is destroyed by sunlight. Follow carefully the directions given with the product when using a stabilizer. Kits for testing free chlorine, pH, total alkalinity, water hardness, and cyanuric acid concentration are an integral part of a proper program for controlling the quality of your pool water.

HOW TO DETERMINE THE CAPACITY OF YOUR POOL:
First: Approximate the average depth in feet by adding the depth at the deep end to the depth at the shallow end and divide the total by two. Then:
For rectangular or square pools: Multiply length (feet) x width (feet) x average depth (feet) x 7.5 = capacity of pool in gallons.
For circular pools: Multiply diameter (feet) x diameter (feet) x average depth (feet) x 5.9 = capacity of pool in gallons.
For oval pools: Multiply long axis (feet) x short axis (feet) x average depth (feet) x 5.9 = capacity of pool in gallons.
NOTE: If pool has sloping sides, multiply total gallons calculated by 0.85 to arrive at the capacity of your pool.

STORAGE AND DISPOSAL:
Keep in original container in a cool, dry well-ventilated place. Keep container closed when not in use. Keep away from heat sources, sparks, open flames and lighted tobacco products. Container Disposal: Do not reuse container. Residual material remaining in empty container can react to cause fire. Thoroughly flush empty container with water before destroying by placing in trash collection. Pesticide Disposal: Waste resulting from the use of this product may be disposed of on site or at an approved waste disposal facility. Do not contaminate water, food, or feed by storage and disposal. In Case of Fire: Breathe with water. Calcium hypochlorite supplies oxygen; therefore, attempts to smother fire with a wet blanket, carbon dioxide, or a dry chemical extinguisher are ineffective. In Case of Spill or Leak: Use extreme caution. Contamination may cause fire or violent reaction. If fire or reaction occurs in area of spill, douse with plenty of water. Otherwise sweep up spilled material, using a clean, dry shovel and broom and dissolve spilled material in water. Then immediately use solution as directed.
