Divosan® Plus

For Industrial Use

ACTIVE INGREDIENTS:
Peroxyacetic acid.................................................................5.2%
Hydrogen Peroxide............................................................13.4%
OTHER INGREDIENTS......................................................81.4%
TOTAL: .............................................................................100.0%

KEEP OUT OF REACH OF CHILDREN
DANGER

FIRST AID
IF IN EYES: Hold eye open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.
IF ON SKIN OR CLOTHING: Take off contaminated clothing. Rinse skin immediately with plenty of water for 15-20 minutes.
IF SWALLOWED: Call a poison control center or doctor immediately for treatment advice. Have person sip a glass of water if able to swallow. Do not induce vomiting unless told to do so by a poison control center or doctor. Do not give anything by mouth to an unconscious person.
IF INHALED: Move person to fresh air. If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably by mouth-to-mouth, if possible.

IN CASE OF EMERGENCY, CALL A POISON CONTROL CENTER OR DOCTOR FOR TREATMENT ADVICE.
1-800-851-7145
Have the product container or label with you when calling a Poison Control Center or doctor or going in for treatment.

Note to physician: Probable mucosal damage may contraindicate the use of gastric lavage.

See additional precautionary statements on side panel.

Net Contents: 18.9 L / 5 U.S. Gal.
Product No: 57571100

Manufactured For: ©2016 Diversey, Inc., PO Box 19747, Charlotte, NC 28219-0747 800-233-1000
DIVOSAN® PLUS is for sanitizing of primarily cleaned, food contact surfaces in: Dairies, Wineries, Breweries and Beverage Plants, Meat and Poultry Processing/Packaging Plants, Milk and Dairy Products Processing/Packaging Plants, Seafood and Produce Processing/Packaging Plants, Food Processing/Packaging Equipment Surfaces, Egg Processing/Packaging Equipment Surfaces, Eating Establishments.

DIRECTIONS FOR USE:
It is a violation of Federal Law to use this product in a manner inconsistent with its labeling. NOTE: FOR MECHANICAL OPERATIONS, prepared use-solutions may not be reused for sanitizing or disinfecting but may be reused for other purposes such as cleaning. FOR MANUAL OPERATIONS, fresh sanitizing or disinfecting solutions should be prepared at least daily or more often if the solution becomes diluted or soiled.

If sanitizing at temperatures 5°C (40°F) or lower, use 1.7-5.7 fluid oz. of product to 5 gallons of water.

Sanitizing Hard, Non-Porous Food Contact Surfaces and Equipment
1. Prior to sanitization, remove gross particulate matter with a warm water flush, then wash equipment with detergent or cleaning solution and rinse with a potable water rinse.
2. Prepare the sanitizing use-solution by adding 1.0 to 5.7 fl. oz. of product to 5 gallons of water per the preparation table instructions.
3. Apply sanitizing solution by immersion, coarse spray, mop, wipe, flood techniques or circulation techniques as appropriate to the equipment or surfaces to be treated. Allow a contact time of at least 1 minute.
4. Allow surfaces to drain thoroughly and air dry before resuming operation. Do not rinse.

Sanitizing Eaten, Drinking and Food Prep Utensils
1. Prior to sanitization, remove gross filth particles by a pre-scrape, preflush and, when necessary a pre-soak treatment.
2. Wash all items with a detergent.
3. Rinse thoroughly with potable water.
4. Prepare the sanitizing use-solution by adding 1.0 to 5.7 fl. oz. of product to 5 gallons of water per the preparation table instructions.
5. Immerse all items for at least 1 minute or for a contact time as specified by the local governing sanitizing code.
6. Place all sanitized items on a rack or drainboard to drain adequately. Air dry if items will not be reused immediately. Do not rinse.

Sanitizing Tableware
For sanitizing tableware in low to ambient temperature warewashing machines, inject a use-solution of product (1.0 to 5.7 fl. oz. per 5 gallons of water) into the final rinse water. Allow treated surfaces to air dry.

Elevated Temperature Sanitizing
At a temperature of 120 deg F, DIVOSAN® PLUS is an effective sanitizer for food contact surfaces at a concentration of 1 oz. of product per 8 gallons of water against Staphylococcus aureus and Escherichia coli, and against Listeria monocytogenes at a concentration of 1 oz. of product per 5 gal. of water. Prior to sanitization, clean and rinse thoroughly all equipment. All surfaces should be exposed to the sanitizing solution for at least 1 minute. Allow equipment to drain thoroughly and air dry. Do not rinse.

Final Sanitizing Bottle Rinse
DIVOSAN® PLUS may be used as a final sanitizing rinse for plastic, glass or metal returnable and non-returnable bottles / cans.
1. Prior to sanitization, wash bottles with detergent or cleaning solution and rinse with potable water.
2. Then rinse bottles/cans with a use-solution prepared by mixing 1.0 to 5.7 fl. oz. of product to 5 gallons of water.
3. Allow bottles/cans to drain thoroughly and air dry. Do not rinse.

Sanitization of Conveyors for Meat, Poultry, Seafood, Fruits, and Vegetables
For use in the static or continuous washing, rinsing, and sanitizing of conveyor equipment, peelers, collators, sizers, saws, etc.
1. Prior to processing or interruptions in operations, apply DIVOSAN® PLUS, by preparing a use-solution by adding 1.0 to 5.7 fl. oz. of product to 5 gallons of water per the preparation table instructions.
2. Apply the sanitizer solution to the return portion of the conveyor or to the equipment using a coarse spray, foam or other means of wetting the surfaces. Control the volume of solution so as to permit maximum drainage and to prevent puddles. The conveyor may still be damp when food contact occurs. Treat for at least 1 minute.

NOT FOR USE IN CALIFORNIA
Batch Sanitization of Piping Systems Associated with RO Membranes
1. Isolate incompatible equipment from piping systems. This includes activated carbon filters and ion exchange equipment. Turn power off to ultraviolet light units.
2. Estimate total volume of water contained in the system (tanks, rinse stations and piping).
3. Prepare use-solution by adding 1.7-9.1 fl. oz. of product per 5 gallons of water. This will provide 150-800 ppm peroxycetic acid.
4. Recirculate the Divosan Plus solution for a minimum of 4 hours. Process usage valves should be opened and closed to expose intervals to the Divosan Plus solution.
5. Drain the Divosan Plus solution from the system and rinse with RO permeate, or similar quality water, until the residual peroxycetic acid is below 3 ppm.

FOGGING FOR CONTROL OF SpoILAGE ORGANISMS IN THE AIR AT FOOD AND BEVERAGE PROCESSING FACILITIES:
Use this product in a fogging device for control of spoilage organisms and/or bacteriophage that could be found in the air in food and beverage processing facilities.
1. Prior to fogging, remove or carefully protect all food products and packaging materials.
2. Ensure room is properly ventilated to prevent migration of vapors to adjacent areas. Vacate all personnel from the room during fogging. Post entry signs notifying employees that fogging is in progress to prevent accidental entry. Plan the fogging operation so that sufficient product is available to properly treat the room without refilling the fogger. Use a remote controlled or time delayed fogging device and leave area before activating the fogger.
3. For control of spoilage organisms and/or bacteriophage that could be found in the air in food and beverage processing facilities, thoroughly fog areas using one quart per 1000 cu. ft., of room area with a 0.30% (4.0 fluid oz. per 10 gallons of water) solution. NEVER enter the room during fogging unless wearing appropriate eye, skin and respiratory protection.
4. Treated areas should not be entered without suitable protective equipment for a minimum period of 2 hours after fogging. Ensure there is no strong odor characteristic of acetic acid (vinaigre), before having personnel return to work area. Do not enter the fogged area until proper ventilation decreases the hydrogen peroxide concentration in the air to less than 0.5 ppm.
5. Prior to re-using equipment and resuming operations, rinse all surfaces with potable water and follow with standard surface sanitation procedures. Always empty and rinse spray/foam equipment with potable water after use as well. Note: The fog generated is irritating to the eyes, skin and mucous membranes. Under no circumstances must a room be entered by anyone during fogging or within two hours of the completion of fogging (assuming a minimum of 4 air exchanges (ACH) per hour in the area being fogged, a minimum of 4 air exchanges (ACH) per hour in the facility after fogging). If the building must be entered, then the individuals entering the area must wear a self-contained respirator approved by NIOSH/MSHA, goggles, long sleeves and long pants.

Batch Sanitization for Ultra Filtration and Reverse Osmosis (RO) Membranes
This product might not totally eliminate all vegetative microorganisms in reverse osmosis membranes and their associated piping systems due to their construction and/or assembly, but it can be relied upon to reduce the number of microorganisms to acceptable levels when used as directed. Check with equipment manufacturer for membrane compatibility with Divosan Plus.
NOTE: Not for use on kidney dialysis membranes, associated systems and any other medical devices of this type.
1. Clean the membrane or other parts of the system with an appropriate cleaner to remove biological or organic fouling.
2. Flush the system with RO permeate or similar quality water.
3. If necessary, circulate an appropriate acid cleaner to remove mineral deposits.
4. Flush the system with RO permeate or similar quality water.
5. Prepare use-solution by adding 1.7-9.1 fl. oz. of product per 5 gallons of water. This will provide 150-800 ppm peroxycetic acid.
6. Fill the system to be sanitized with the Divosan Plus solution and allow to reach a minimum temperature of 20°C.
8. Allow membrane elements to soak in the Divosan Plus solution for 20 minutes.
9. Drain the Divosan Plus solution from the system and rinse with RO permeate, or similar quality water, until the residual peroxycetic acid is below 3 ppm.
**Disinfection and Deodorizing of Animal Housing Facilities, Poultry Premises, Coops, Trucks and Crates**

1. Remove all animals and feeds from areas being treated.
2. Remove all litter and manure from floors, walls and surfaces of barns, pens, stalls, chutes, and other facilities occupied or traversed by animals.
3. Empty or cover all troughs, racks and other feeding and watering appliances.
4. Thoroughly clean all surfaces with soap and detergent and rinse with water.
5. Prepare a disinfecting use-solution by adding 3.2 fl. oz. of product to 5 gallons of water. Apply use-solution to floors, walls, cages and other washable hard, non-porous environmental surfaces. For smaller surfaces, use a trigger spray bottle to spray all surfaces with solution until wet. To disinfect, all surfaces must remain wet for 10 minutes.
6. Immerse all halters, ropes and other types of equipment used in handling and restraining animals, as well as forks, shovels and scrapers used for litter and manure.
7. Before starting the treatment ensure that the work area is well ventitated. Do not house animals or re-employ equipment until product has dried.
8. For disinfection of feed racks, troughs, automatic feeders, fountains and watering appliances scrub with use-solution, let stand 10 minutes. Then thoroughly scrub all treated surfaces with soap or detergent and rinse with potable water before reuse.

**Poultry Hatchery Disinfection**

1. Remove remaining eggs and chicks, poultry and feeds from premises, trucks, coops and crates.
2. Remove all litter and droppings from floors, walls and surfaces and other hatching-related debris occupied or traversed by poultry/chicks.
3. Empty all troughs, racks and other feeding and watering appliances.
4. Thoroughly wash all surfaces, with a recommended detergent or cleaning solution and then rinse with potable water.
5. Prepare the disinfecting use-solution by adding 3.2 fl. oz. of product to 5 gallons of water. Apply the disinfecting solution with a mop, cloth or coarse spray, keeping surfaces wet for 10 minutes.
6. Before starting the treatment ensure that the work area is well ventilated. Do not house poultry/eggs or employ equipment until product has dried.
7. Thoroughly scrub feed racks, troughs, automatic feeders, fountains, and waterers with soap or detergent, and rinse with potable water before reuse.

**Antimicrobial Rinse of Pre-Cleaned or New Returnable or Non-Returnable Containers**

Use DAVISAN® PLUS to reduce the following non-pathogenic beverage spoilage organisms: Aspergillus versicolor, Byssoschlamys fulva, Pediococcus damnessus, Lactobacillus buchneri, and Saccharomyces cerevisiae.

1. Prepare the antimicrobial rinse solution by adding 7.0 to 30 fl. oz. of product to 5 gallons of water.
2. Apply antimicrobial rinse at a temperature of 40°C to 60°C, with a contact time of at least 7 seconds.
3. Allow containers to drain thoroughly, and then rinse with sterile or potable water.

**Surface Disinfection**

Prepare the disinfecting use-solution by adding 3.2 fl. oz. of product to 5 gallons of potable water. Apply the disinfecting solution by wiping, mopping, or as coarse spray. For heavily soiled areas, a pre-cleaning is required. Allow to soak for at least 10 minutes, then drain treated surfaces. Applications involving treatment of food contact surfaces require a sterile or potable water rinse following disinfection.

**To Sanitize Non-Food Contact Surfaces:**

1. Prepare Use-Solution as follows:
   - Dilute 3.2 fl. oz. of Divosan Plus per 5 gallons of water.
   - Dilute 8 fl. oz. of foaming agent, Shureclean Plus, per 1 gallon of water.
   - Mix the solution of Divosan Plus with use solution of Shureclean Plus at a 1:1 ratio.
   - This provides 140 ppm PA.
2. Pre-clean heavily soiled hard non-porous surfaces.
3. Apply Use Solution until thoroughly wet.
4. Let stand for 5 minutes.
5. Wipe surfaces and let air dry.
6. Not for use on food contact surfaces or on food preparation areas.

This product is not intended for once-through or recirculating cooling tower systems. Severely fouled systems should be cleaned before adding the product. Refer to the system operational manual for directions to clean severely fouled systems. The product should be added directly to the system and not mixed with other chemicals or additives. Other chemicals should be added separately. Contamination with other chemicals could result in product decomposition. Add product at a point in the system where uniform mixing and even distribution will occur.

**Intermittent Feed Method:** When the system is noticeably fouled apply 12-60 ounces (5-26 ppm peroxycarboxylic acid) of product per 1000 gallons of water in the system. Repeat until control is achieved. When microbial control is evident, add 42 fl. ounces (17 ppm peroxycarboxylic acid) of product per 1000 gallons of water in the system every day, or as needed, to maintain control. The daily dose rate could vary depending upon the severity of the biofouling.

**Continuous Feed Method:** Initial Dose - When the system is just noticeably fouled, apply 12-60 fl. ounces (5-26 ppm peroxycarboxylic acid) of product per 1000 gallons of water in the system. When microbial control is achieved, start adding product continuously at a rate of 42 fl. ounces per 1000 gallons of water (provide 17 ppm of peroxycarboxylic acid and 44 ppm of hydrogen peroxide). Then reduce the rate of addition to a level sufficient to maintain control. The dose rate may have to be adjusted to account for the losses due to blowdown and evaporation. Add the 42 fl. ounces of product for every 100 gallons of make-up water.

**STORAGE AND DISPOSAL**

Do not contaminate water, food, or feed by storage or disposal.

**PESTICIDE STORAGE**

Keep container closed. Store in a cool, clean area away from all contaminants, especially dirt, caustic, reducing agents and metals. Contamination and impurities will reduce shelf life and can induce decomposition. In case of decomposition, isolate container, douse container with cool water and dilute with large volumes of water. Keep storage container closed at all times when not in use. Keep container out of direct sunlight. To maintain product quality keep at temperatures below 86°F. Do not store on wooden pallets.

**PESTICIDE DISPOSAL**

Pesticide wastes are acutely hazardous. Improper disposal of excess pesticide, spray mixture, or rinseate is a violation of Federal law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

**CONTAINER DISPOSAL**

Nonrefillable container. Clean container promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank. Fill the container ¼ full with water and replace and tighten closures. Tip container on its side and roll it back and forth, ensuring at least one complete revolution, for at least 30 seconds. Stand the container on its end and tip it back and forth several times. Empty the rinseate into application equipment or a mix tank or store rinseate for later use or disposal. Repeat this procedure two more times. Offer container for reconditioning, if appropriate.

**PROCEDURE FOR LEAK OR SPILL**

Stop leak if this can be done without risk. Shut off ignition sources; no flames, smoking, flares or spark producing tools. Keep combustible and organic materials away. Flush spilled material with large quantities of water. Unburned material should not enter confined spaces.

**PRECAUTIONARY STATEMENTS**

**HAZARD TO HUMANS AND DOMESTIC ANIMALS**

**DANGER:** Corrosive. Causes irreversible eye damage and skin burns. May be fatal if absorbed through the skin or inhaled. Harmful if swallowed. Do not get in eyes, on skin or on clothing. Do not breathe vapor or spray mist. Wear chemical splash-proof goggles or face shield, rubber gloves and protective clothing. Wash thoroughly with soap and water after handling. Remove contaminated clothing and wash before reuse. When fogging or spraying, wear a mask or pesticide respirator jointly approved by the Mine Safety and Health Administration and the National Institute for Occupational Safety and Health.

**PHYSICAL AND CHEMICAL HAZARDS**

Strong oxidizing agent. Mix only with water. This product is not combustible; however, at temperatures exceeding 156°F, decomposition occurs releasing oxygen. The oxygen released could irritate or promote combustion of other materials.

**ENVIRONMENTAL HAZARDS**

Do not discharge effluent containing this product into lakes, streams, ponds, estuaries, oceans or other waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting agency has been notified in writing prior to discharge. Do not discharge effluent containing this product to sewer systems without previously notifying the local sewage treatment plant authority. For guidance contact your State Water Board or Regional Office of the EPA.
