MGK

6810 Tenth Avenue North
Minneapolis, MN 55427

IF SWALLOWED: Call a poison control center or doctor immediately for treatment advice. Do not give any liquid to the person. Do not induce vomiting unless told to do so by a poison control center or doctor. Do not give anything by mouth to an unconscious person.

IF IN EYES: Hold eye open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eyes. Call a poison control center or doctor for treatment advice.

IF ON SKIN OR CLOTHING: Take off contaminated clothing. Rinse skin immediately with plenty of water for 15-20 minutes. Call a poison control center or doctor for treatment advice.

KEEP OUT OF REACH OF CHILDREN

CAUTION

First Aid
For control of insects, indoors and outdoors, in food and non-food areas such as, but not limited to: Homes, Schools, Warehouses, Office Buildings, Apartment Buildings, Theaters, Hotels, Industrial Buildings, Motels, Kennels, Livestock Housing, Food Processing Plants, Food Service Establishments, Restaurants, Supermarkets and Grocery Stores, Transportation Equipment, Truck Trailers, Railroad Cars, and Food Manufacturing and Warehousing Establishments. Also for use on Backyards, Lawns, Trees, Ornamental Landscaping, Recreational Areas, Parks and Athletic Fields.

Insects Controlled:
- Ants
- Aphids
- Asian Lady Beetles
- Bed Bugs
- Bees
- Boxelder Bugs
- Carpet Beetles
- Centipedes
- Cockroaches
- Crickets
- Dog Ticks
- Earwigs
- Fire Ants
- Firebrats
- Fleas
- Mealybugs
- Midges
- Millipedes
- Millites
- Millites
- Millites
- Pilifticks
- Psocids
- Scales
- Silverfish
- Spiders
- Springtails
- Swarming Termites
- Ticks
- Waterbugs
- Gnats
- Horn Flies
- Houseflies
- Mosquitoes
- Small Flying Flies
- Whitesflies
- Hornets
- Lice
- Mosquitoes
- Scorpions
- Spiders
- Ticks
- Wasps
- Yellow Jackets
- Maize Weevils
- Meal Moth Larvae
- Mediterranean Flower Moths
- Merchant Grain Beetles
- Red Flour Beetles
- Rice Weevils
- Rusty Grain Beetles
- Saw-toothed Grain Beetles
- Spider Beetles
- Spider Mites
- Square-necked Grain Beetles
- Tobacco Moths
- Yellow Mealworms
- Hide Beetles
- Horse Flies
- Lice
- Litter Beetles
- Mites
- Mosquitoes
- Stable Flies

Flying Insects Including:
- Blow Flies
- Chiggers
- Clothes Moths
- Crane Flies
- Deer Flies
- Face Flies
- Fruit Flies
- Fungus Gnats
- Deer Ticks
- Dog Ticks
- Fire Ants
- Fleas
- Gnat Flies

Biting and Stinging Pests:
- Bed Bugs
- Bees
- Chiggers
- Deer Flies

Stored Product Pest Including:
- Ants
- Cadellins
- Cigarette Beetles
- Cockroaches
- Confused Flour Beetles
- Dark Mealworms
- Dried Fruit Beetles
- Larvae
- Maize Weevils
- Meal Moth Larvae
- Mediterranean Flour Moths

Use only in areas described. Remove pets and cover fish aquariums and pets' food and water dishes before spraying. Keep all people (especially children) and pets out of areas being treated and restricted access to these areas until all surfaces are dry. DO NOT LEAVE product where children or pets can come into contact with it. DO NOT allow spray to contact food or food-containing surfaces, feed, or water supplies. Thoroughly wash dishes and food handling utensils with soap and water if they become contaminated with this product. Food utensils such as teaspoons and measuring cups must not be used for food purposes after use with pesticides.

**APPLICATION IN FOOD PROCESSING/HANDLING ESTABLISHMENTS:**
Application is permitted within Food and Non-Food Areas of Food Service and Handling Establishments (Places Other than Private Residences) Including But Not Limited to Restaurants, Meat Processing Plants, Grocery Stores, Bakeries, Food Manufacturing and Processing Establishments, and Food Warehousing Establishments. Do not treat establishments where livestock feed is present. Food areas include areas for receiving, storing, packing, bedding, wrapping, boxing, preparing, edible waste storage, and enclosed processing systems, mills, and dairies. Serving areas are places where prepared foods are served, such as dining rooms, but excluding areas where foods may be prepared or held. Non-food areas include garbage rooms, offices, floors (to sewers), entrances and vestibules, offices, locker rooms, machine rooms, garages, mop closets, and storage after carring or bottling.

**General Surface Applications:** Do not apply ONSLAUGHT® Microencapsulated Insecticide as a general surface application in food areas of the facility when the facility is in operation or food is exposed. Do not apply directly to food. Cover or remove all food and food processing equipment prior to application. After spraying in meat packing plants, bakeries, and other food processing plants, wash with an effective cleaning compound, and then rinse all equipment, benches, shelves, etc., where exposed food will be handled with potable water. Repeat applications as needed, but do not exceed more than one application every 14 days.

**Spot or Crack & Crevice Applications:** Spot or crack and crevice applications may be made while facility is in operation, provided exposed food is covered or removed from the area being treated. Do not apply directly to food or food-handling surfaces. Repeat applications as needed, but do not exceed more than one (1) application every 14 days.

In the home, cover exposed food and do not allow spray to contact food surfaces. If spray does contact these surfaces, clean surfaces with soap and water.

**MIXING INSTRUCTIONS:**
ONSLAUGHT® Microencapsulated Insecticide should be mixed with water and applied with hand pressurized or power operated sprayers. Shake container of ONSLAUGHT® Microencapsulated Insecticide before diluting. Clean spray equipment before use. For dilution, add approximately half the required water to spray tank and then add the appropriate amount of ONSLAUGHT® Microencapsulated Insecticide. Agitate, and slowly add the remaining water. Agitate spray thoroughly before using and also occasionally during use to ensure dispersion. If spray filter screens are used, they should be 50 mesh or larger. Use 0.5 fluid ounce of ONSLAUGHT® Microencapsulated Insecticide in 1.0 gallon of water to make a spray mixture containing 0.025% active ingredient. Use 1.0 fluid ounce per gallon of water to make a spray containing 0.05% active ingredient. Use 0.025% solution for light infestations or as a maintenance control rate. Use 0.05% for heavy infestations or as an initial clean-out rate. Apply two-second bursts of spray per square foot of area being treated. Avoid excessive application. Dampen surfaces but not to the point of saturation or runoffs. Only dilute ONSLAUGHT® Microencapsulated Insecticide with water.

**Formula for determining the active ingredient content of the finished spray mixture:**

\[
\text{Percent Active Ingredient of Spray Mix} = \left( \frac{\text{Gallons of finished spray mix}}{128} \right) \times (6.4) \times (\text{number of fl. oz. of ONSLAUGHT® Microencapsulated Insecticide added to tank})
\]

**Crawling Insect Pests Indoors:** Apply as a coarse, wet spray to surfaces where insects, crawl spaces, eaves, corners, closets, washer, dryers, refrigerators, storage, the underside shelter. Contact as many insects as possible with application every seven (7) days.

**Ant Control Indoors:** Apply to ant trails, around garbage receptacles, a fine mist to entrance to the structure. Remove sources of food.

**Flying Insect Pests Indoors:** Treat insect resting areas such as walls and ceiling. Initiate treatments at the beginning of the season.

**Stinging Insect Pests Indoors:** Apply spray to nests in the evening when active. Treat around doors as...
For Control of Brown Dog Ticks:
Thoroughly apply as a spot treatment to infested areas such as pet beds and resting areas, nearby cracks and crevices, along and behind baseboards, window and door frames, and localized areas of floor and floor coverings where these pests may be present. DO NOT SPRAY PETS WITH THIS PRODUCT. Treat dogs and cats with a product registered for use on animals.

For Control of Fleas:
Thoroughly apply as a fine particle broadcast spray to infested rugs, carpets, and pet resting areas. Prior to treatment, aquariums and fish bowls should be covered, and pet animals should be removed from the area being treated. Do not permit humans or pets to contact treated surfaces until spray has dried. Old pet bedding should be removed and replaced with clean, fresh bedding after treatment. DO NOT SPRAY PETS WITH THIS PRODUCT. Treat dogs and cats with a product registered for use on animals.

To Control Bed Bugs:
Thoroughly clean and sanitize mattresses and box springs. Treat mattresses and box springs with an approved pesticide, such as a pyrethrin aerosol. Apply ONSLAUGHT® Microencapsulated Insecticide as a spot treatment to potential harborage sites and migration paths, and cracks and crevices, around baseboards, floorboards, headboards, and walls.

For Control of Stored Product Pests:
Spray thoroughly around and into floor drains, non-food conveyors, benches, pipes, pallets, moist areas, storage racks, pieces of equipment, and other areas where stored product pests may be found. Tank-mix or sequential use of an insect growth regulator, such as Nyguard® IGR Concentrate, is recommended to break the insect reproduction cycle. Do not apply this spray to surfaces or utensils that may come in contact with food, since excessive residues in food may result.

To Treat Voids in Equipment and Structures:
To kill insects harboring in wall voids and other inaccessible spaces in equipment and structures, use injection equipment designed for deep void applications. Follow the injection equipment manufacturer's recommendations for proper set up and air pressures. Place the applicator tip at or into the void space to be treated. For inaccessible voids, it may be necessary to drill an access hole(s). Inject product into the void space in short bursts, allowing air pressure to push insecticide deep into the space. Avoid applying to the point of runoff or drip. Ventilate area thoroughly before re-entry. Do not reaply more than 14 days.

To Kill the Accessible Stages of Listed Granary Insects:
Use this concentrate to treat grain storage facilities, and other listed areas, for stored product pest control. For control of exposed adult and immature stages of stored products pests, apply to cracks, crevices, and other surfaces where the pests have been seen or have harborage. Treat areas where products are stored before filling with the product. Apply at the rates listed above, using one gallon of spray mix per 1,000 square feet of surface area to be treated. Cleaning all areas prior to use will increase levels of control. Any foodstuffs infested with pests should be removed. Do not apply when food-processing facility is in operation or foods are exposed. Do not apply this spray to surfaces or utensils that may come in contact with food.

Repeat Application As Needed, but Do Not Exceed More Than One Application Every Fourteen (14) Days.

USE IN AND AROUND LIVESTOCK HOUSING:
For use in and around unoccupied areas of livestock facilities, such as, but not limited to: Barns, Cow and calf pens and hutches, Dairy Barns and Milk Rooms, Hog Barns, Horse Barns, Sheep Barns, Poultry Houses, and Rabbit Hutches. Do not contaminate milk, food, or drinking water. Remove animals from area being treated. Cover feeders and waterers. Do not apply or allow insecticide to drift onto animals. Do not allow animals to enter treated areas until spray solution has dried.

Crawling Insect Pests in Livestock and Poultry Premises:
Apply as a general surface, spot treatment, and/or crack and crevice treatment. Apply to floor where crawling insects are or may be present. Treat stanchions, pipes, windows, doors, posts, etc, feeders, and other areas where insects hide or congregate. To reduce immigration of insects, m outside of building foundations. Apply in a uniform band 1-3 feet up the exterior foundation wall.

Litter Beetle Control in Livestock and Poultry Premises:
To control litter beetles (darkling, hide, and carrion beetles), apply ONSLAUGHT® Microencapsulated cleanout and before reintroduction of animals. Treat areas where beetles frequently occur;_nav, stalls, and around feeders. To reduce immigration of insects, make a perimeter trea foundations. Apply in a uniform band 1-3 feet up the exterior foundation wall and 3-6 feet out fi

Flying Insect Pests in Livestock and Poultry Premises:
For residual control of flying insects, treat insect resting areas such walls, ceilings, screens, arbor other surfaces that attract flying insects. Initiate treatments at the beginning of fly season and heavy infestation.

OUTDOOR USE:
Do not spray in or near fish ponds or other bodies of water. Not for use on plants being grown for sale or other commercial use. Not for use in nurseries, so}

</tbody>
</table>

Insect Control in Ornamental Trees and Landscapes:
For residential and commercial trees, shrubs, ground covers, and bedding and foliage plants that will not be harvested for food, apply ONSLAUGHT® Microencapsulated Insecticide in appropriate volumes of water to obtain thorough coverage. Apply as a full-coverage foliar spray, applying to the point of drip but not runoff. Treat active soil pests with an application to surrounding soil. Repeat treatments as necessary to achieve control, using higher application rates as pest pressure and foliage area increases. Repeat applications as necessary, but no more than once every seven (7) days. Certain plants may be sensitive to the final spray solution. A small-scale test is recommended to verify safety to ornamental plants. Spray and observe for one (1) week prior to application of an entire planting.

Insect Control on Lawns, Turf Grass, and Turf:
For best results, lawn or turf grass should be mowed 1-2 days before spraying. Treat with spraying equipment or a hand sprayer. Use application volumes of up to 10 gallons per 1,000 sq. ft. to get uniform coverage when treating dense grass foliage. For low volume applications using less than 2 gallons of spray solution per 1,000 sq. ft., immediate irrigation with at least 0.25 inch of water is recommended to improve effectiveness on sub-surface pests.

When hand spraying, spray using a slow, even sweeping motion, making sure to cover the entire lawn or turf grass area where pests are observed. Spray under ornamentals and trees. Repeat treatments may be necessary at 7 to 14 day intervals.

Rate Range:
Use lower rate range for pests that are commonly exposed and will be contacted by spray solution at the time of application. For pests that will not be contacted by spray solution at the time of application, use the upper rate range. Use 1.0 fl. oz. per 1,000 sq. ft. when treating Mole Crickets and Chinch Bugs.

To Kill Swarming Termites: OUTDOORS ONLY:
Apply spray mix as a coarse, wetting spray when swarming termites are seen emerging from woodpiles, wooden fence posts, wooden structures, or from the ground. Swarming usually occurs in the spring or at other times when a termite colony becomes overcrowded and new reproductive termites
landscapes: ground covers, e harvested for 1 insecticide in 4 high coverage. To the point of 1 application to the point of 3 pressure and necessary, but 1 plants may be 11-scale test its ants. Spray and 2 of an entire

To Kill Wood Destroying Pests: OUTDOORS ONLY.
Apply spray mix as a coarse, wetting spray to exposed pests and to the damaged areas of wood, spraying into galleries or tunnels in the exposed wood. Also spray around doors, window and door frames, and other areas where these pests may hide or enter the house. Spray into cracks and crevices and, if necessary, drill small holes and spray into inaccessible wooden structural voids where these pests are suspected.

Mosquito Breeding sites:
Mosquito populations may be reduced by application of ONSLAUGHT® Microencapsulated Insecticide to sites where mosquitoes rest, harbor, and breed. Apply spray solution into tall grass, shrubbery, and around backyards and lawns where these pests may hover or rest. Apply while air is still. Not for wide area mosquito use. Do not apply with hand held or truck mounted cold aerosol ULV sprayers and thermal topping devices.

STORAGE AND DISPOSAL
Do not contaminate water, food, or feed by storage or disposal.
PESTICIDE STORAGE: Store in a cool, dry area under lock and key. Post as a pesticide storage area. Always store pesticides in the original container. Store away from food, pet food, feed, seed, fertilizers, and veterinary supplies. Place liquid formulations on lower shelves and dry formulations above.
PESTICIDE DISPOSAL: To avoid wastes, use all material in this container by application according to label directions. If wastes cannot be avoided, offer remaining product to a waste disposal facility or pesticide disposal program (often such programs are run by state or local government or by industry).
CONTAINER HANDLING
Nonrefillable container. Do not reuse or refill this container.
Triple rinse as follows: Empty the remaining contents into the application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container 1/4 full with water and recap. Shake for 10 seconds. Pour rinseate into the application equipment or a mix tank or store rinseate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Then offer for recycling if available, or puncture and dispose of in a sanitary landfill or by incineration. Do not burn unless allowed by state and local ordinances.
