Precautionary Statements

Hazards to Humans and Domestic Animals

Caution

Causes moderate eye irritation. Harmful if swallowed. Avoid contact with eyes, skin or clothing. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum or using tobacco. Remove and wash contaminated clothing before reuse.

Keep Out of Reach of Children

Caution

Do not use or store near heat or an open flame. Notice: Shake well before use. Avoid breathing. Read entire label. Use only according to label directions. Before using this product, read Warranty Disclaimer, Inherently Safe Use, and Limitation of Remedies at the end of the label booklet. If terms are unacceptable, return at once unpopped.

Environmental Hazards

This pesticide is extremely toxic to fish and aquatic organisms, and toxic to wildlife. To protect the environment, do not allow pesticide to enter or run off into storm drains, drainage ditches, Puerto Rican lagoons or surface waters. Applying this product in calm weather when rain is not predicted for the next 24 hours will help reduce drift. If wind or rain does not blow away the pesticide, wait at least 24 hours before applying drift control. Do not apply this product or allow it to drift to ripening crops or weeds. Do not apply the product or allow it to drift to ripening crops or weeds that are losing the plants. Apply this product only as specified on the label.

Physical and Chemical Hazards

Do not use or store near heat or an open flame. Notice: Shake well before use. Avoid breathing. Read entire label. Use only according to label directions. Before using this product, read Warranty Disclaimer, Inherently Safe Use, and Limitation of Remedies at the end of the label booklet. If terms are unacceptable, return at once unpopped.

Brand: Standguard

Premise Insecticide
(Early Agricultural Use Only)
A controlled release provides freedom for use in and around livestock/poultry housing, pet kennels, railcars, trucks and trailers for control of flies, lice, mosquitoes, ants, bees, wasps, yellow jackets, pillbugs, scorpions, spiders, ants, ticks and litter bottles.

Active ingredients:
Chloropyrifos-ethyl (20%) and 
Deltamethrin (5%)

Other ingredients:
Contains 0.5% preservative

Net contents:
2 fl oz (59 mL)

Bar Code: Standguard

Flymaster
OUTDOOR SURFACE USE
For control of flies, fleas, mosquitoes, ants, bees, wasps, crickets, pillbugs, scorpions, sowbugs, spiders, ticks and l只不过儿童

CAUTION
Notice: Shake well before use. Avoid breathing. Read entire label. Use only according to label directions. Before using this product, read Warranty Disclaimer, Inherent Risks of Use, and Limitation of Remedies at the end of the label book. If terms are unacceptable, return it at once unopened.

STORAGE AND DISPOSAL
Do not contaminate water, food or feed by storage or disposal. Notice: Shake well before use. Avoid breathing.

Reflection: Store in original container tightly closed. In secure place.

Container Disposal: Nonrefillable container. Do not reuse or refill this container. Dispose of empty container properly after emptying. Triple rinse as follows: completely refill, wash out refills and rinse 10 times after the last use. Do not reuse empty container for water or any other purpose.

INTEGRATED PEST AND RESISTANCE MANAGEMENT
Flies, beetles and other insects have demonstrated the ability to develop resistance to insect control products. Continual exposure of these and other insects to a single class of insecticide may lead to the development of resistance to that class of insecticide. The following resistance management strategy will help ensure the prolonged effectiveness of STANDGUARD insecticide, as well as other conventional insecticides.

1. Apply STANDGUARD insecticide and other insect control agents only according to label directions.
2. Do not use less than the labeled rate of any insect control product.
3. Include multiple control tactics (cultural and/or biological controls) within an integrated pest management program.
4. Rotate STANDGUARD insecticide with other classes of insecticide, such as pyrethroids, chloronicotinyls, and organophosphates, etc. during an insect pest season.
5. For advice concerning integrated pest management practices or in relation to local conditions, consult resources in resistance management programs, your Cooperative Agricultural Extension Service, or your Elanco Animal Health representative (1-800-426-4441).

PREMIPE INSECTICIDE
For use as a general surface (non-food/food/feed areas), crack and crevice or spot treatment in and around livestock/poultry housing, pet kennels, rabbit cages, trucks and trailers. STANDGUARD insecticide is intended for dilution with water for application using hand-held or powered equipment as a hose or sprayer for cracks and crevices, or spot and general surface treatments. Application equipment that delivers low volume treatments may also be used to apply treatments to cracks and crevices, or spot and general surface treatments. Fill the applicator tank with the desired volume of water and add STANDGUARD insecticide. Close and shake before use to ensure proper mixing. Shake re-agitate applicator tank before use if application is interrupted. Make up only amount of treatment volume as required.

1. FLIES: Fleas, MOSQUITOS, worms and WASPS: Apply directly to walls, ceilings, window screens, and other insect resting areas as a residual surface treatment. May be used in and around equipment storage sheds, also see OUTDOOR SURFACE USE.
2. ANTS: Apply to ant trails around doors and windows and other places where ants are found. Apply barrier treatments to prevent infestations as directed in
BARRIER TREATMENTS; also see OUTDOOR SURFACE USE.

3. SPIDERS AND CRICKETS: Apply as a coarse, low pressure mist to areas where pests hide such as corners, storage areas, around water pipes, doors and windows, attics and eaves and basements. Pay particular attention to cracks and crevices; also see OUTDOOR SURFACE USE.

4. SOWBUGS AND MILLBUGS: Apply around doors and windows and other places where those pests may be found or where they may enter the premises. Treat storage areas and other locations. Apply barrier treatments to prevent infestations as directed in BARRIER TREATMENTS; also see OUTDOOR SURFACE USE.

5. LITTER BEETLES (Darling, Hobs and Carrion Beetles) in Animal Housing (such as Poultry Housing): To control adult litter beetles, apply STANDARDSGUARD instantly to walls and floors at each grow-out or sanitation procedure, before reintroduction of poultry or other animals. This will suppress beetles that escaped earlier treatment and will also help to delay the onset of further infestations. Pay attention to areas where beetles frequently occur, such as walls, supports, cages, stalls and around feeders; also see LIVESTOCK/Poultry HOUSING STRUCTURES."

---

**INHERENT RISKS OF USE**

It is impossible to eliminate all risks associated with the use of this product. Lack of performance or other unintended consequences arise from the effect of such factors as use of the product contrary to label instructions, abnormal conditions, presence of other materials, the manner of application, or other factors which are beyond the control of Elanco Animal Health or the user. All such risks are assumed by the buyer.

**LIMITATION OF REMEDIES**

The exclusive remedy for losses or damages resulting from this product (including claims based on contract, negligence, strict liability, or other legal theories), shall be limited to, at Elanco Animal Health's election, one or the following:

1. Refund of purchase price paid by the buyer or user for product bought;

2. Replacement of an amount of product used

Elanco Animal Health shall not be liable for losses, or damages resulting from the handling or use of this product unless Elanco Animal Health is promptly notified of such loss or damage in writing. To the extent permitted by law, Elanco Animal Health shall not be liable for consequential or incidental damages or losses.

---

**ENVIRONMENTAL HAZARDS**

This pesticide is extremely toxic to fish and aquatic organisms, and toxic to wildlife. To protect this environment, do not allow pesticide to enter or run off into storm drains, drainage ditches, gutters or surface waters. Applying this product in calm weather when rain is not predicted for the next 24 hours will help to ensure that wind or rain does not blow or wash pesticide off the treatment area. Airing application equipment over the treated area will help avoid run off to water bodies or drainage systems. This product is highly toxic to bees exposed to direct treatment or residues on blooming crops or weeds. Do not apply this product or allow it to drift to blooming crops or weeds if bees are visiting the treatment area. Apply this product only as specified on the label.

**PHYSICAL AND CHEMICAL HAZARDS**

Do not use or store near heat or an open flame. Notice: Shake well before use. Avoid freezing. Read entire label. Use only according to label directions. Before using this product, read Warranty Disclaimer, Inherent Risks of Use, and Limitation of Remedies at the end of the label booklet. If terms are unacceptable, return at once unopened.

```
LIVESTOCK/Poultry HOUSING STRUCTURES

Apply as a general surface and/or crack and crevice treatment. Control is enhanced when interior and exterior perimeter applications are made in and around livestock, poultry and pet housing structures. Normal cleaning practices of the structure must also be followed along with applications of STANDARDSGUARD to effectively control the crawling and flying insects listed in the table. For poultry houses, apply to floor area (birds grown on litter) or to walls, poles and cage framing (birds grown in cages). Application should be made into cracks and crevices around insulation. Re-apply after each grow-out or sanitation procedure. Indoor control can be enhanced by making perimeter treatments around the outside of the building foundations to prevent migrating beetles. Maintaining a year round treatment program will prevent background populations from reaching problem levels. DO NOT make applications of STANDARDSGUARD in areas where animals are present in the facility. Allow treated surfaces to dry completely before restocking the facility. DO NOT make applications to any animal feedstuffs, water or watering equipment. DO NOT contaminate any animal food, feed or water in and around livestock, poultry or pet housing when making applications.
