PRECAUTIONARY STATEMENTS
HAZARDS TO HUMANS AND DOMESTIC ANIMALS
DANGER: Corrosive. Causes eye and skin damage. Harmful if swallowed. Irritating to nose and throat. Avoid breathing vapor. Do not get in eyes, on skin or clothing. Wear goggles or face shield, rubber gloves and protective clothing when handling. Wash thoroughly with soap and water after handling. Remove contaminated clothing and wash before reuse.

ENVIRONMENTAL HAZARDS
This product is toxic to fish and aquatic organisms. Do not discharge effluent containing this product into lakes, streams, ponds, estuaries, oceans or other waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge. Do not discharge effluent containing this product to sewer systems without previously notifying the local sewage treatment plant authority. For guidance contact your State Water Board or Regional Office of the EPA.

CHEMICAL HAZARDS
Dry sodium chloride is a strong drying agent. This product becomes a fire or explosive hazard if exposed to dry mix only in water. Combustion may start a chemical reaction with generation of heat, liberation of hazardous gases (chlorine dioxide gas, oxalic acid gas), and possible fire and explosion. Do not contaminate with garbage, dirt, organic matter, household products, chemicals, soap products, paint products, solvents, acids, alcohols, beverages, oils, pine oil, oils, or any other foreign matter.

DIRECTIONS FOR USE
It is a violation of federal law to use this product in a manner inconsistent with its labeling.

Directions for Use in the Mechanical or Electrolytic Generation of Chlorine Dioxide as a Disinfector, or for Microorganism Control in Water and Wastewater Systems
AKTA KLOR 25 may be used in the mechanical generation of chlorine dioxide for use in controlling microorganisms in water and wastewater systems. AKTA KLOR 25 is fed to chlorine dioxide generation equipment, which produces chlorine dioxide from sodium chloride by one of the following methods of generation:
1) The chlorine method, which uses AKTA KLOR 25 and chlorine gas;
2) The hypochlorite method, which uses AKTA KLOR 25 and a generation of a hypochlorite solution, and an acid;
3) The soda-chlorite method, which uses AKTA KLOR 25 and on acid as the activating agent; or
4) The electrolytic method which uses AKTA KLOR 25 with sodium chloride as added with sodium.
Your Occidental Chemical Corporation representative can guide you in the selection, installation and operation of generation systems. Consult the instructions on the chlorine dioxide generation system before using AKTA KLOR 25.

FEED REQUIREMENTS
Feed rates of AKTA KLOR 25 will depend on the severity of contamination and the degree of control desired. The exact dosage will depend on the size of the system and residual necessary for effective control. Depending on the generator type, AKTA KLOR 25 may be dosed at the point of use to prepare a 3% to 7.75% active aqueous solution for use in chlorine dioxide generation. In all cases, generated chlorine dioxide solution should be applied in such a manner to ensure adequate mixing and minimized volatilization. The water stream to be treated may either be passed directly through the chlorine dioxide generator or treated via side-stream injection point. The operation is employed should be in good working order and capable of achieving chlorine dioxide solutions free from chlorine contamination.
Because of the variability of demand in water and process systems, the dosage of chlorine dioxide required to achieve the targeted residuals is normally lower for continuous feed systems than for slug or meter feed applications. The minimum acceptable residual for chlorine dioxide, as determined by a certified procedure, is 0.1 ppm for a minimum one minute contact time.

AKTA KLOR 25
CHLORINE DIOXIDE PRECURSOR FOR MICROBIAL CONTROL IN WATER AND WASTEWATER

ACTIVE INGREDIENTS: Sodium Chloride 29%
OTHER INGREDIENTS: 71%
TOTAL: 100%

KEEP OUT OF REACH OF CHILDREN DANGER FIRST AID
If in eyes:
- Hold eye open and rinse slowly and gently with water for 15-20 minutes.
- Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.
- Call a poison control center or doctor immediately for treatment advice.

If on skin or clothing:
- Take off contaminated clothing.
- Rinse skin immediately with plenty of water for 15-20 minutes.
- Call a poison control center or doctor for treatment advice if burning or irritation of the skin persists.

If swallowed:
- Have person drink a glass of water immediately if able to swallow.
- Call a poison control center or doctor immediately for treatment advice.
- Do not induce vomiting unless told to do so by the poison control center or doctor.
- Do not give anything by mouth to an unconscious person.

If inhaled:
- Move person to fresh air and monitor for respiratory distress.
- If cough or difficulty in breathing develops, consult a physician immediately.
- If person is not breathing, call 911 or an ambulance. Then give artificial respiration.
- Call a poison control center or doctor for further treatment advice.

For emergency information call: 800-733-3665 (24 hours)
Have the product container or label with you when calling a poison control center or doctor or going to treatment.

NOTE TO PHYSICIAN: Probable mucosal damage may contaminate the use of gastric lavage.

CHEMTREC Emergency No: 1-800-424-9300

Residual determination procedures should be substantiated methods and should also be specific for chlorine dioxide or used in systems where no chlorine contamination is possible. Do not add AKTA KLOR 25 directly to process water.

APPLICATIONS
WATER AND WASTEWATER DISINFECTION: For most municipal and public potable water systems, a chlorine dioxide residual concentration up to 2.5 ppm is sufficient to provide adequate disinfection. Residual disinfectant and disinfection by-products must be monitored as required by the National Primary Drinking Water Regulations (40 CFR Part 141) and state drinking water standards. For wastewater and sewage applications, residual chlorine dioxide concentrations up to 5.0 ppm are generally adequate.

FOOD PROCESSING PLANTS, DAIRIES, BOTTLING PLANTS, AND BREWRIES: For microbial control in typical food processing water systems, such as flume transport, chill water systems, hydrcleaners, beverage and brewery pasteurizers and bottle rinsing, apply AKTA KLOR 25 through a chlorine dioxide generation system to achieve a chlorine dioxide residual concentration ranging from 0.25 to 5.0 ppm.

Water, containing up to 3 ppm residual chlorine dioxide may be used for washing fruits and vegetables that are not raw agricultural commodities in accordance with 21CFR733.300. Treatment of the fruits and vegetables with chlorine dioxide must be followed by a potable water rinse, or by blanching, cooking or canning.

POULTRY PROCESSING WATER: Use AKTA KLOR 25 to generate chlorine dioxide for use as an antimicrobial agent in water used in poultry processing in an amount not to exceed 3 ppm residual chlorine dioxide as determined by an appropriate method.

AQUEOUS DISINFECTION SYSTEMS FOR CPI CLEANING: If the concentration of chlorine dioxide generated from AKTA KLOR 25 exceeds 5.0 ppm, a potable water rinse should follow treatment. Care should be taken to ensure the biological and chemical quality of the potable water.

GENERAL INDUSTRIAL PROCESS WATER TREATMENT (OLIEFIELD INJECTION WATER, WHITE WATER PAPER MILL SYSTEMS, AND RE Circulating COOLING TOWERS): For control of microbial slime, these systems will require a chlorine dioxide residual concentration ranging between 0.25 and 5.0 ppm. The AKTA KLOR 25 dosage needed to achieve these levels will vary widely depending on the exact application.

Please consult your Occidental Chemical Corporation representative for assistance in determining the correct dosage level.

STORAGE AND DISPOSAL
DO NOT CONTAMINATE WATER, FOOD OR FEED BY STORAGE OR DISPOSAL
Storage: Store this product in a cool, dry area away from direct sunlight and heat to avoid deterioration. In case of spill, flood the area with large quantities of water.

Pesticide Wastes: Pesticides are wastes are acutely hazardous. Improper disposal of excess pesticides, spray mixtures, or在职 is a violation of Federal Law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

Container Disposal: Triple rinse (or equivalent) all containers and offer for recycling or reconditioning, or puncture and dispose of in a sanitary landfill, or by other procedures approved by state and local authorities.
