IMIDACLOPRID

Garant™ PRO 75 WSP
Insecticide In Water Soluble Packets

**For use by individuals/firms licensed or registered by the state to apply termite control products. States may have more restrictive requirements regarding qualifications of persons using this product. Consult the structural pest control regulatory agency of your state prior to use of this product.**

**For prevention or control of subterranean termites.**

**ACTIVE INGREDIENT:**
Imidacloprid, 1-[6-Chloro-3-pyridinyl(methyl)]-N-nitro-2-imidazolidinimine

**INERT INGREDIENTS:**

Do Not Remove Packets From Container Except For Immediate Use. Keep water soluble packets in this container and store in a cool dry place but not below freezing (32 °F).

**STOP – Read the label before use**
**KEEP OUT OF REACH OF CHILDREN**

**CAUTION**

**PRECAUTIONAL INFORMATION:**
Si usted no puede leer o entender inglés, no use este producto hasta que la etiqueta le haya sido explicada ampliamente.

**(TO THE USER):** If you cannot read or understand English, do not use this product until the label has been fully explained to you.

**IN CASE OF A MEDICAL EMERGENCY INVOLVING THIS PRODUCT,**
**CALL TOLL FREE, DAY OR NIGHT, 1-866-303-6950**

**EPA Reg. No.:** 432-1332-67760
**Distributed by:** Cheminova, Inc.
1700 Route 23
Wayne, NJ 07470
www.cheminova.us.com
**GARANT** is a trademark of Cheminova.

This is a specimen label, intended for use only as a guide in providing general information regarding use of this product. As labels are subject to revision, always carefully read and follow the label on the product container.

**FIRST AID**

**IF SWALLOWED:**
- Call a poison control center or doctor immediately for treatment advice.
- Have person sip a glass of water if able to swallow.
- Do not induce vomiting unless told to do so by a poison control center or doctor.
- Do not give anything by mouth to an unconscious person.

**IF ON SKIN OR CLOTHING:**
- Take off contaminated clothing.
- Rinse skin immediately with plenty of water for 15 to 20 minutes.
- Call a poison control center or doctor for treatment advice.

**IF IN EYES:**
- Hold eye open and rinse slowly and gently with water for 15 to 20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.
- Call a poison control center or doctor for treatment advice.

Have the product container or label with you when calling a poison control center or doctor, or going for treatment. In case of emergency call 1-866-303-6950.

Note To Physician: No specific antidote is available. Treat the patient symptomatically.

**PRECAUTIONARY STATEMENTS**

**HAZARDS TO HUMANS AND DOMESTIC ANIMALS**

CAUTION

Harmful if swallowed, inhaled, or absorbed through skin. Causes eye irritation. Avoid contact with skin, eyes, or clothing. Avoid breathing dust or vapor. Wash thoroughly with soap and water after handling.

Remove contaminated clothing and wash before reuse. Keep children or pets away from treated area until dry.

When treating adjacent to an existing structure, the applicator must check the area to be treated, and immediately adjacent areas of the structure, for visible and accessible cracks and holes to prevent any leaks or significant exposures to persons occupying the structure. People present or residing in the structure during application must be advised to remove their pets and themselves from the structure if they see any signs of leakage. After application, the applicator is required to check for leaks. All leaks resulting in the deposition of semitoxics in locations other than those prescribed on this label must be cleaned up prior to leaving the application site. Do not allow pets or people to contact contaminated areas or to reoccupy contaminated areas of the structure until the clean up is completed.

**PERSONAL PROTECTIVE EQUIPMENT (PPE)**

Pesticide handlers (mixers, loaders, and applicators) must wear long-sleeved shirt and long pants, socks, shoes, and water-proof gloves. After the product is diluted in accordance with label directions for use, shirt, pants, socks, shoes and waterproof gloves are sufficient. In addition, all pesticide handlers must wear protective eyewear when working in a non-ventilated space or when applying termiteicide by rodling or sub-slab injection.

**ENVIRONMENTAL HAZARDS**

This product is highly toxic to aquatic invertebrates. Do not apply directly to water, to areas where surface water is present or to intertidal areas below the mean high water mark. Do not contaminate water when disposing of equipment washwaters. Apply this product only as specified on this label. Extreme care must be taken to avoid runoff. Apply only to soil or other fill substrate that will accept the solution at the specified rate. Do not treat soil that is water-saturated or frozen or in any conditions where run-off or movement from the treatment area is likely to occur.

**DIRECTIONS FOR USE**

It is a violation of federal law to use this product in a manner inconsistent with its labeling. Structures that contain walls or clamps within the foundation of the structure can only be treated using the treated backfill method described in the treatment around walls and columns section of this label. Consult state and local specifications for recommended distances of wells from treated areas. If such regulations do not exist, refer to Federal Housing Administration Specifications (HUD) for guidance.

Do not formulate this product into other end-use products.

**MIXING TABLE FOR GARANT PRO 75 WSP INSECTICIDE**

**MIXING:** Refer to Mixing Table for proper amount of GARANT PRO 75 WSP Insecticide to be used. Within each foil envelope are clear inner packets containing GARANT PRO 75 WSP Insecticide. The clear inner packet is water soluble. Do not allow packets to become wet prior to adding to the spray tank. Do not handle the clear inner packets with wet hands or wet gloves. Rough handling may cause breakage. Reused foil envelope to protect remaining packets.
POST-CONSTRUCTION TREATMENT

CONCRETE SLAB-ON-GROUND: To apply a treatment under the slab, including attached or built-in foundations, entrance platforms, or similar slab-type structures, a process may be necessary to:

- Drill through the slab or exterior foundation. Drill holes should be spaced in a manner that will allow for application of a continuous chemical treated zone. Treat all existing cracks and voids with the treated material before extending the material into the slab. Use a spray gun or similar applicator to apply the treatment to the slab. Each 3 feet of slab requiring treatment requires a minimum of 0.05 gallons of solution per lineal foot of slab, resulting in a minimum of 0.5 gallons of solution per lineal foot of slab.

- Admixture of the treated material to the concrete, as required.

- Apply a minimum of 0.05 gallons of solution per lineal foot of slab.

CONTROL - GENERAL

Treatment standards for subsurface termiticide control may vary due to regulations, treatment procedures, soil types, construction practices and other factors. The purpose of chemical treatment for termite control is to establish a continuous chemical treated zone (horizontal and/or vertical as needed) between the wood and other cellulose material in the structure and the termite colonies in the soil. After all federal, state, and local regulations and treatment standards are satisfied, the area considered free from termites.

When the area is determined to be free from termites, application, landscape modifications, or structural repairs may be needed to derive termite protection of a moisture source. Use a 0.05 to 0.1% dilution based on local recommendations. Generally a 0.05% dilution is used for typical control situations. Where severe or persistent infestations occur, a 0.1% dilution may be used.

PRE-CONSTRUCTION TREATMENT

Concretes at slab on grade or less than specified on this label for application prior to installation of the finished grade.

Prior to each application, all contractors must notify the general contractor, construction supervisor, or other party of the intention to make application and insets of application and instruct the contractor and all instruction personnel to notify construction workers and other individuals to leave the area to be treated during application and until the termiteicide is absorbed into the soil.

CONCRETE SLAB-ON-GROUND OR BASEMENTS: Apply an overall treatment to the entire surface of soil or other substrate to be covered by the slab including areas to be under carpets, porches, basement floor and entrance platform. Apply at the rate of 1 gallon of solution per 10 linear feet of slab length or area of slab or floor. Each 3 feet of slab requiring treatment requires a minimum of 0.05 gallons of solution per lineal foot of slab, resulting in a minimum of 0.5 gallons of solution per lineal foot of slab.

CRAWL SPACE TREATMENT: Application should be made by trenching or tending along the slab or foundation perimeter. Rodding may be done from the bottom of a shallow trench. When rodding, red rods should be spaced in a manner that will allow for a continuous chemical treated zone, not to exceed 12 inches, to be deposited along the treated area. Rod holes should not extend below the footing. Apply 4 gallons of solution (see APPLICATION VOLUME) per 10 linear feet, per foot of depth to provide a uniform treated zone. When rodding, the trench along the outside foundation should be about 8 inches wide and 6 inches deep. Use a low pressure spray not to exceed 25 PSI at the treatment when the valve is open. When rodding, the trench along the outside foundation should be about 8 inches wide and 6 inches deep. Use a low pressure spray not to exceed 25 PSI at the treatment when the valve is open.

When treating foundations deeper than 4 feet, apply the termiteicide as being read. If the construction contractor fails to notify the applicator to permit this, the treated zone shall be at least 3 feet of soil after the treated zone has been keyed up to the slab. Do not trench and rod into the trench or trench along the foundation walls and around piers and other foundation elements, rate the protectant from grade to a minimum depth of 4 feet. When the foot of the excavation is exposed, the soil must be placed adjacent to the foot of the excavation to a depth not to exceed the bottom of the footing. However, in no case should a structure be treated below the footing.

Roddng in trenched followed by fenching of trenched and treated soil may provide a better opportunity to achieve a continuous chemical treated zone than using soil rodld alone to establish a vertical termiteicide treated zone.

CRAWL SPACE TREATMENT: Application should be made by trenching or tending and capping downward along the inside and outside of foundation walls, around piers, exterior support in contact with the soil, plumbing, and utility services. Apply 4 gallons of solution (see APPLICATION VOLUME) per 10 linear feet, per foot of depth to provide a uniform treated zone. When trenching, the trench along the outside foundation should be about 8 inches wide and 6 inches deep. Use a low pressure spray not to exceed 25 PSI at the treatment when the valve is open. Application shall not be followed by the foot of the floor or footing. When treating foundations deeper than 4 feet, apply the termiteicide as being read. If the construction contractor fails to notify the applicator to permit this, the treated zone shall be at least 3 feet of soil after the treated zone has been keyed up to the slab. Do not trench and rod into the trench or trench along the foundation walls and around piers and other foundation elements, at the rate prescribed from grade to a minimum depth of 4 feet. When the foot of the excavation is exposed, the soil must be placed adjacent to the foot of the excavation to a depth not to exceed the bottom of the footing. However, in no case should a structure be treated below the footing.

HOLLOW BLOCK FOUNDATIONS OR FOILDS: Hollow block foundations or voids in masonry footing on the footing may be treated to provide a continuous chemical treated zone in the voids at the bottom of the foundation. Apply 4 gallons of solution per 10 linear feet to the lower part of the void so that it reaches the top of the footing or soil. Treatment of voids in block or block foundation walls must be closely examined. Applicators must inspect areas of possible infestation as a precaution against application leakage of the treated material. Some areas may not be treatable or may require mechanical alteration prior to treatment. All leeching into the application of termiteicide in locations other than those prescribed on this label shall be removed prior to final application. Treat the treated zone shall be at least 3 feet of soil after the treated zone has been keyed up to the slab. Do not trench and rod into the trench or trench along the foundation walls and around piers and other foundation elements, rate the protectant from grade to a minimum depth of 4 feet. When the foot of the excavation is exposed, the soil must be placed adjacent to the foot of the excavation to a depth not to exceed the bottom of the footing. However, in no case should a structure be treated below the footing.

TREATMENT AROUND WELLS OR GISTERNERS: Do not contaminate wells or cisterns.
PERIMETER PEST CONTROL
ANTS: Treat soil, turf or ground cover adjacent to the structure where ants are trailing or may find food or breeding sites. Apply to flowers, shrubs or ornamental plant beds adjacent to the structure where ants may find food or foliage. To control ants tunneling in soil, apply a 0.05% to 0.1% solution as a drench or soil injection at intervals to establish a continuous treated zone. Treat any pathway of water, driveways or other hard surfaces where ants are foraging beneath the surface. Apply in sufficient water to cover the foliage and soil area being treated. Maximum application is once per month to maintain control. Do not allow residents or pets into the immediate area during the application or contact with treated areas until spray has dried. Do not use this product against native or imported fire ants, pharaoh or harvester ants.

NOTE: Where severe pest pressures may exist and when rapid knockdown or exclusion at pest entry points is desired, supplemental treatments using GARANT PRO 75 WSP Insecticide with targeted applications of a pyrethroid such as TEMPO® SG ULTRA or SUSPIND® SG to doors and windows, utility entry points, and other places where pests enter the structure. Read and follow all label directions for use of this companion product.

GENERAL PRECAUTIONS FOR APPLICATIONS
After treatment, plug and fill all holes drilled in concrete slab areas of the building with a suitable sealant.
Do not apply solution until location of heat pipes, ducts, water and sewer lines and electrical conduits are known and identified. Caution must be taken to avoid puncturing and injection into these structural elements.
Do not plant for the purpose of consumption, edible plants into the treated areas of soil.
Avoid contamination of public and private water supplies.
Use anti-backflow equipment or an air gap on filling hoses.

Consult State, Federal, or local authorities for information regarding the approved treatment practices for areas in close proximity to potable water supplies.

STORAGE AND DISPOSAL
Do not contaminate water, food, or feed by storage or disposal.
Pesticide Storage: Store in a cool, dry place and in such a manner as to prevent Cross contamination with other pesticides, fertilizers, food, and feed. Do not store below freezing (5°F). Exposure to moisture or excessive handling of water soluble packets may cause breakage. Store water soluble packets in original container and out of reach of children, preferably in a locked storage area.
Handle and open container carefully. Do not put water soluble packets when opening. If containter is leaking or material spilled for any reason or cause, carefully sweep material into a pail. Refer to PRECAUTIONARY STATEMENTS on the label for hazards associated with the handling of this material. Do not walk through spilled material. Dispose of pesticide as directed below. Spilled spill or leak incidents, keep unauthorized people away. You may contact Chemtura at 800-424-9000 for decontamination procedures or any other assistance that may be necessary.
Pesticide Disposal: Wastes resulting from the use of this product may be disposed of on site (in the treatment area) or at an approved waste disposal facility.
Container Disposal: Do not use carbon in connection with food, feed or drinking water. The empty foil wrappers may be disposed of in the trash. After removing all PVA packets, the container may be disposed of in the trash.

WARRANTY DISCLAIMER
Chemtura warrants that this product conforms to the chemical description on the label and is reasonably fit for the purposes stated on the label when used in strict accordance with the directions subject to the inherent risks set forth below. CHEMTURA MAKES NO OTHER EXPRESS OR IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR ANY OTHER EXPRESS OR IMPLIED WARRANTY.

INHERENT RISKS OF USE
It is impossible to eliminate all risks associated with use of this product. Crop injury, lack of performance and other unintended consequences may result because of such factors as use of the product contrary to label instructions (including conditions noted on the label, such as unfavorable temperatures, soil conditions, etc.), abnormal conditions (such as excessive rainfall, drought, freeze, tornadoes, hurricanes), presence of other materials, the manner of application, or other factors, all of which are beyond the control of Chemtura or the seller. All such risks shall be assumed by Buyer.

LIMITATION OF REMEDIES
The exclusive remedy for losses or damages resulting from this product (including claims based on contract, negligence, strict liability, or other legal theories), shall be limited to, at Chemtura's election, one of the following:
(1) Refund of purchase price paid by buyer or user for product bought, or
(2) Replacement of amount of product used.
Chemtura shall not be liable for losses or damages resulting from handling or use of this product unless Chemtura is promptly notified of such loss or damage in writing. In no case shall Chemtura be liable for consequential or incidental damages or losses. The terms of the Warranty Disclaimer above and this Limitation of Remedies cannot be varied by any written or verbal statements or agreements. No employee or sales agent of Chemtura or the seller is authorized to vary or exceed the terms of the Warranty Disclaimer or this Limitation of Remedies in any manner.
