IN CASE OF A MEDICAL EMERGENCY INVOLVING THIS PRODUCT, CALL TOLL FREE, DAY OR NIGHT, 1-866-303-6950

READ THE ENTIRE LABEL BEFORE USING THIS PRODUCT. Use only according to label instructions.

Read "DISCLAIMER" before buying or using. If terms are not acceptable, return product unopened without delay.

PRECAUTIONARY STATEMENTS

HAZARDS TO HUMANS AND DOMESTIC ANIMALS

This product is highly toxic to aquatic invertebrates. Do not apply directly to water, to areas where surface water is present or to tidal areas below the mean high water mark. Do not contaminate water when disposing of equipment washwaters. Apply this product only as directed.

— Avoid the spray area that remains for a reasonable time after application. Do not allow water soluble packets to become wet prior to adding to the spray tank. Do not handle the clear inner packets with wet hands or wet gloves.

— When treating adjacent to an existing structure, the applicator must check the area to be treated and immediately adjacent areas of the structure, for visible and accessible cracks and holes to prevent any leaches or significant exposures to persons occupying the structure. People present in the structure during application must be isolated from the structure by a physical barrier. After application, people shall wash thoroughly with soap and water after handling. Remove contaminated clothing and wash before reuse. Keep children or pets away from treated area until dry.

— Extreme care must be taken to avoid runoff. Apply only to soil or other fill substrate that will accept the solution at the specified rate. Do not treat soil that is water-saturated or frozen or in any conditions where run-off or movement from the treatment area (site) is likely to occur.

INERT INGREDIENTS:

Keep water soluble packets in this container and store in a cool dry place but not below freezing (32 °F).

IMPORTANT: This product must not be used until the label has been fully explained to you.

IN CASE OF INGESTION:

— Call a poison control center or doctor immediately for treatment advice.

IN CASE OF CONTACT:

— Wash skin immediately with plenty of water for 15 to 20 minutes.

— Rinse eyes immediately with large amounts of water for 15 to 20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.

— Call a poison control center or doctor for treatment advice.

PRECAUTIONS TO AVOID EXPOSURE

— Avoid breathing dust or vapor. Wash thoroughly with soap and water after handling.

— Remove contaminated clothing and wash before reuse. Keep children or pets away from treated area until dry.

— Do not allow water soluble packets to become wet prior to adding to the spray tank. Do not handle the clear inner packets with wet hands or wet gloves. Rough handling may cause breakage. Never envelop to protect remaining packets.

PERSONAL PROTECTIVE EQUIPMENT (PPE)

Pesticide handlers (mixers, loaders, and applicators) must wear long-sleeved shirt and long pants; socks, shoes and waterproof gloves. After the product is diluted in accordance with label directions for use, short pants, socks, shoes and waterproof gloves are sufficient.

— Sufficient. In addition: all pesticide handlers must wear protective eyewear when working in a non-ventilated space or when applying termiticide by rodding or sub-slab injection.

— For prevention or control of subterranean termites. Do not treat soil that is water-saturated or frozen or in any conditions where run-off or movement from the treatment area (site) is likely to occur.

— Extreme care must be taken to avoid runoff. Apply only to soil or other fill substrate that will accept the solution at the specified rate. Do not treat soil that is water-saturated or frozen or in any conditions where run-off or movement from the treatment area (site) is likely to occur.

— Extreme care must be taken to avoid runoff. Apply only to soil or other fill substrate that will accept the solution at the specified rate. Do not treat soil that is water-saturated or frozen or in any conditions where run-off or movement from the treatment area (site) is likely to occur.

— Call a poison control center or doctor immediately for treatment advice.

— Do not give anything by mouth to an unconscious person.

— Have person sip a glass of water if able to swallow.

— If on skin:

— Wash skin immediately with plenty of water for 15 to 20 minutes.

— For use by individuals/firms licensed or registered by the state to apply termiticide products.

— States may have more restrictive requirements regarding qualifications of persons using this product. Consult the structural pest control regulatory agency of your state prior to use of this product.

— Insecticide In Water Soluble Packets

— This product is highly toxic to aquatic invertebrates. Do not apply directly to water, to areas where surface water is present or to tidal areas below the mean high water mark. Do not contaminate water when disposing of equipment washwaters. Apply this product only as directed.

— The clear inner packet is water soluble. Do not allow packets to become wet prior to adding to the spray tank. Do not handle the clear inner packets with wet hands or wet gloves.

— In addition: all pesticide handlers must wear protective eyewear when working in a non-ventilated space or when applying termiticide by rodding or sub-slab injection.

— The clear inner packet is water soluble. Do not allow packets to become wet prior to adding to the spray tank. Do not handle the clear inner packets with wet hands or wet gloves.

— When treating adjacent to an existing structure, the applicator must check the area to be treated and immediately adjacent areas of the structure, for visible and accessible cracks and holes to prevent any leach or significant exposures to persons occupying the structure. People present in the structure during application must be isolated from the structure by a physical barrier. After application, people shall wash thoroughly with soap and water after handling. Remove contaminated clothing and wash before reuse. Keep children or pets away from treated area until dry.

— It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

— Extreme care must be taken to avoid runoff. Apply only to soil or other fill substrate that will accept the solution at the specified rate. Do not treat soil that is water-saturated or frozen or in any conditions where run-off or movement from the treatment area (site) is likely to occur.

— Extreme care must be taken to avoid runoff. Apply only to soil or other fill substrate that will accept the solution at the specified rate. Do not treat soil that is water-saturated or frozen or in any conditions where run-off or movement from the treatment area (site) is likely to occur.

— Extreme care must be taken to avoid runoff. Apply only to soil or other fill substrate that will accept the solution at the specified rate. Do not treat soil that is water-saturated or frozen or in any conditions where run-off or movement from the treatment area (site) is likely to occur.

— Avoid the spray area that remains for a reasonable time after application. Do not allow water soluble packets to become wet prior to adding to the spray tank. Do not handle the clear inner packets with wet hands or wet gloves. Rough handling may cause breakage. Never envelop to protect remaining packets.
To prepare the spray mixture, open the fill valve and drop the required number of unpainted clear water soluble paint buckets into the spray tank while filling with water to the desired level. Open the agitator while mixing. Depending on the water temperature and the degree of agitation, this process should completely disperse within a few moments from the time they are added. For each gallon of water, add a maximum of one gallon of termiticide per 10 linear feet. The water temperature increases the time needed for the paint to disperse completely.

**Note:** GARGANT PRO 75 WP insecticide paint should not be used with a paint sprayer in a tank that may contain benzene or other free solvents. The resultant reaction of paint and benzene or other free solvents which may be used in 같이를 위한 물연료로 사용할 수 있는 용액이 있을 때에는 이를 사용하여 분말의 분산을 돕는다. 그리고 동일한 용액의 배합량은, 용액 10피트 당 1피트의 깊이에 약 1분량으로 적정분량이 되어야 한다. 또한, 이 경우에는 적정 분산시간이 필요하며, 용액의 분산시간은 물온도와 믹스의 강도에 따라 다르다.

**APPLICATION VOLUME:** It is recommended that application volumes described in the GARGANT PRO 75 WP insecticide “APPLICATION VOLUME” (see use section) shall not exceed those described in the 2 gallons of solution per 10 linear feet. For example, 0.05% is the correct rate to be applied in 4 gallons of water to treat 40 linear feet of foundation wall. Therefore, use a different use rate as directed below the 40 linear feet of foundation wall.

**CONTROL – GENERAL** Treatment standards for subsurface termite control may vary due to regulations, treatment procedures, species found on the treated soil, or other factors. The purpose of any chemical soil treatment for termite control is to establish a continuous chemical treated zone (horizontal and vertical as treated) between the soil and other cellulose materials in the structures and voids within the structures. Chemical soil treatment will not prevent entry to the structures, but it will ensure that the chemical will be distributed to the termite workers. It also improves the ability of the chemical to control termite activity inside the structures.

**PRE-CONSTRUCTION TREATMENT** Do not apply on or in contact with any vegetation or soil other than structures. While application should be made prior to installation of the finished grade. Prior to each application, each application must notify the general contractor, construction superintendent, or similar responsible party, of the intended termiticide application and instructed the responsible person to notify construction workers and other individuals to the area to be treated during application and until the termiticide is absorbed into the soil.

**CONCRETE SLAB-ON-GROUND OR BASEMENTS:** Apply an overall treatment to the entire surface of the concrete slab or basements including all vertical surfaces below the finished grade. This treatment is described as an overall treatment, and will ensure a minimum of 0.1% dilution over the entire slab or basement. Chemical soil treatment should be applied in accordance with USEPA standards for protection of a structure from termites. In these instances where an aerial or above ground cavity is established, supplemental treatments to the conrete, foundation modifications, and/or structural repairs may be required to deactivate termites of a residual source. Use a 0.05% to 0.1% dilution of solution based on local recommendations. Generally, 0.05% dilution is used for typical construction situations. When severe or persistent infestations occur, a 0.1% dilution may be used.

**HOLLOW BLOCK FOUNDATION OR VOIDS:** Treatment for voids may be accomplished by driving holes along the outside of the void spaces using pressures greater than 25 PSI at the treatment tool. Drill holes should be spaced in a manner that will allow for a continuous chemical treated zone, not to exceed 12 inches. Drill holes should not extend below the footing. Use a very coarse spray at a pressure not exceeding 20 PSI at the treatment tool value when the water is open.

When a crawl space cannot be reached with the application wand, use extension wands or other suitable equipment to apply a coarse spray on the soil. Do not use to inaccessible crawl space areas using pressures greater than 25 PSI at the treatment tool when the water is open. Treatment may also be made by drilling through the foundation wall or through the floor above and treating the soil perimeter at a rate of 1 gallon of solution per 10 square feet. Drill holes may extend through a thickness of 12 inches of soil, or drill holes should extend a minimum of 6 inches deep. Use a very coarse spray at a pressure not exceeding 20 PSI at the treatment tool, at a pressure not exceeding 25 PSI at the treatment tool value when the water is open.

When treating hollow block foundation or voids, use a very coarse spray within the cavity at a pressure not exceeding 20 PSI at the treatment tool value when the water is open. Drill holes should be spaced in a manner that will allow for a continuous chemical treated zone, not to exceed 12 inches. Drill holes should not extend below the footing. Use a very coarse spray at a pressure not exceeding 20 PSI at the treatment tool value when the water is open.

**BASEMENTS – OUTSIDE PERIMETER:** Along the outside of the exterior walls, an application must be made by trenching or rodding within the trench. Rodding depth should be to the top of the footing, or to a minimum of 6 feet according to local regulations. When notching through a trench, drill a narrow trench approximately 6 inches wide and deep along the outside and inside of the foundation walls, being careful not to dig below the bottom of the footings. Drill holes should be spaced in a manner that will allow for a continuous chemical treated zone, not to exceed 12 inches. Drill holes should not extend below the footing. Use a very coarse spray at a pressure not exceeding 20 PSI at the treatment tool value when the water is open.

**BASEMENTS – INSIDE PERIMETER:** It is necessary to drill along by the perimeter of the interior walls, from the outside of the exterior walls, to the center of the foundation walls. Center holes may be spaced at a minimum of 6 feet apart. When treating foundations deeper than 4 feet, the termiticide as the backfill is being placed into the trench after rodding. Mix spray solution with the soil as it is being placed in the trench. Use a very coarse spray at a pressure not exceeding 20 PSI at the treatment tool value when the water is open. Drill holes should be spaced in a manner that will allow for a continuous chemical treated zone, not to exceed 12 inches. Drill holes should not extend below the footing. Use a very coarse spray at a pressure not exceeding 20 PSI at the treatment tool value when the water is open.

**BASMENTS – TREATMENT AROUND WELLS OR CISTERNS:** When treating plenums, turn off the air circulation system of the structure until application has been made. Apply an overall treatment under the plenum fill with solution. Application may be made by drenching the plenums with solution at a rate of 2 gallons of solution per 10 linear feet. Drill holes may be placed in a manner that will allow for a continuous chemical treated zone adjacent to both sides of foundation walls, supporting piers, plumbing and concrete basements. When treating the plant fill with the solution, drill holes may be spaced in a manner that will allow for a continuous chemical treated zone, not to exceed 12 inches. Drill holes should not extend below the footing. Use a very coarse spray at a pressure not exceeding 20 PSI at the treatment tool value when the water is open.

**PLUMBING – DRAINAGE:** When there is insufficient clearance between floor joists and ground surfaces

**POST-CONSTRUCTION TREATMENT** **CONCRETE SLAB-ON-GROUND:** For all new construction treat under the slab, including attached porches, carports, eaves, plinths, garages and similar side structures. It may be necessary to drill through the slab or exterior foundation, drill holes should be spaced in a manner that will allow for application of a continuous chemical treated zone. Treat all existing cracks and cold, construction or expansion joints. Also, treat around built in plant, plumbing and utility service access. Drill holes should be spaced in a manner that will allow for a continuous chemical treated zone. Drill holes should not extend below the footing. Use a very coarse spray at a pressure not exceeding 20 PSI at the treatment tool value when the water is open.

When there is insufficient clearance between floor joists and ground surfaces
Structures With Wells/Cisterns Inside Foundations: Structures that contain wells or cisterns within the foundation of a structure can only be treated using the following techniques:

1. Do not treat soil while it is beneath or within the foundation or along the exterior perimeter of the structure that contains a well or cistern. The treated backfill technique must be used on soil that is removed and treated outside of the foundation. The treated backfill technique is described as follows:

   a) Use an auger or shovel to remove soil to be treated onto heavy plastic sheeting or similar material or into a wheelbarrow.

   b) Treat the soil at the rate of 1 gallon of solution per 10 linear foot of depth of the trench, or 1 gallon per 1.0 cubic feet of soil. Mix thoroughly into the soil taking care to contain the liquid and prevent runoff or spillage.

2. After the treated soil has dried, the soil may be re-placed.

Structures With Adjacent Wells/Cisterns and/or Other Water Bodies: Applications must be made in combination with liquid solution to provide a continuous treated zone at the recommended rate for the application site. Use appropriate dispersion tips and application method for site.

PERIMETER PEST CONTROL

Ants: Do not treat areas where ants are trailing or may enter the structure where ants are trailing or may enter the structure. Apply to flower, shrub or ornamental plant beds adjacent to the structure where ants may find food or foliage. For control of ants tunneling in soil, apply a 0.05% to 0.1% solution in a directed or soil injection at intervals to establish a continuous treated zone. Treat along the edge of walkways, driveways or other hard surfaces where ants are foraging beneath these structural elements.

In situations where ants are foraging beneath a structure, treat a continuous perimeter band around the structure. Use in sufficient water to cover the foliage and soil areas being treated. Maximum application is once per month to maintain control.

Do not allow pedestrians or pets into the immediate area during the application or contact with treated areas (until spray has dried).

Do not use this product against native or imported fire ants, pharaoh or harvester ants.

NOTE: Do not apply to any spot where children or animals may enter the treated area. Do not allow children or animals into treated areas. Do not allow residents or pets into the immediate area during the application or contact with treated areas (until spray has dried). Application site may be exposed to water and soil during the period immediately following treatment.

Storage and Disposal

1. Do not contain waste water, food, or beverage containers or dispose of contaminated waste in landfills.

2. Pesticide Storage: Store in cool, dry place in such a manner as to prevent cross contamination with other pesticides, fertilizers, foods, and feed. Do not store below freezing (20°F). Exposure to rain or excessive handling of water soluble packets may cause breakdown. Store water soluble packets in original container and out of reach of children, preferably in a locked storage area.

3. Label and open container carefully. Do not cut or cut water soluble packets when opening. If container is leaking or material spilled when opening, close container immediately and follow the directions listed below.

4. All water soluble packets must be disposed of in the trash.

5. Container Disposal: Do not use container in connection with food, feed or drinking water. The empty, foil wrapped containers may be disposed of in the trash. After removing all PAC packets, the carton may be disposed of in the trash.

WARRANTY DISCLAIMER

Cheminova warrants that this product conforms to the chemical description on the label and is reasonably fit for the purpose stated on the label when used in accordance with the directions. Subject to the warranty set forth below, CHEMINOVA MAKES NO OTHER EXPRESS OR IMPLIED WARRANTIES, INCLUDING, WITHOUT LIMITATION, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE OR ANY OTHER EXPRESS OR IMPLIED WARRANTY.

INHERENT RISKS OF USE

It is impossible to eliminate all risks associated with use of this product. Crop injury, lack of performance, or other unintended consequence may result because of such factors as use of the product contrary to label instructions (including conditions noted on the label, such as weather conditions, temperature, and soil type), misapplication (such as excessive rainfall, drought, tidal movements, hurricanes, presence of other materials, the manner of application, or other factors, all of which are beyond the control of Cheminova or the seller). All such risks must be assumed by buyer.

LIMITATION OF REMEDIES

The exclusive remedy for losses or damages resulting from this product (including claims based on contract, negligence, strict liability, or other legal theories), shall be limited to, at Cheminova’s election, one of the following:

1. (a) Refund of purchase price paid by buyer or use for product bought; or

2. Replacement of amount of product used.

Cheminova shall not be liable for losses or damages resulting from handling of or use of this product in a manner inconsistent with the directions labeling. In no case shall Cheminova be liable for consequential or incidental damages or losses.

The exclusive remedy under this Warranty shall be limited to the warranty terms set forth herein. Cheminova reserves the right to reject any claim not in accordance with the terms or conditions of this Warranty or to accept the limitation or modification of any warranty described in this Warranty. In no case shall Cheminova be held liable for any claims made by any writer or vendor or statements or agreements, nor for any employee or agents of Cheminova who on this behalf is authorized to sign or to make warranty representations or assume the liability of this Warranty or any remedy for the same in any manner.
