DIRECTIONS FOR USE

Rate of Fast Trak may vary with the conditions of application. Add as the last ingredient when mixing with wettable powders, dispersable granules, and other materials designed to be mixed with plain water. Add first when spraying materials sensitive to hard water or high pH. Always add with agitator running.

Always read and follow the entire pesticide label for proper timing rates, specific directions and any special use precautions or regional use recommendations.

STORAGE AND DISPOSAL

1. Prohibitions: Do not contaminate water, food or feed by storage, disposal or cleaning of equipment.
2. Storage: Store in original container only and keep sealed. Store in closed storage areas. Use caution when moving, opening, closing or pouring.
3. Pesticide Disposal: Improper disposal of excess spray mixture or rinsate is a violation of federal law. Wastes resulting from use of this product should be disposed of through on-site application or on an approved waste disposal facility.
4. Container Disposal: Triple rinse (or equivalent), then offer recycling or reconditioning, or puncture and dispose of in a sanitary landfill, or other procedures approved by state and local authorities.

SUGGESTIONS FOR USE

Fast Trak should be used in spray applications where pesticide requires an ammonium sulfate or ammonium nitrate type additive. It is most beneficial due to its lack of corrosiveness or abrasiveness to spray nozzles.

Herbicides, Defoliants and Desiccants: Use 1 to 4 pints per 100 gallons of solution.

Fast Trak is intended for use with herbicides such as Glyphosate Products, Poast, Gramoxone Intenso and any others where ammonium sulfate is recommended. NOTE: If the pesticide manufacturer requires the use of a surfactant, then always include a non-ionic surfactant labeled for such use, such as POWER-LINE Surf 90. Surfactant must contain at least 90% active ingredient.

NOT FOR AQUATIC USE
