PRECAUTIONS FOR USE

DIRECTIONS FOR STERILIZATION
Spor-Klenz Ready To Use is a liquid to be used as a terminal sterilant on any critical/semicritical medical device. Remove any organic debris or organic material from the surface to be sterilized. This can often be accomplished by rinsing with water or by detergent cleaning followed by a water rinse. Rinse the item to be sterilized in a sufficient volume of Spor-Klenz Ready To Use for 10 minutes at 150°F (65°C). The item should be placed in clean dry containers and allowed to dry for 10 minutes after treatment. Spor-Klenz Ready To Use is also effective when used alone or in combination with other sterilization solutions. This solution can be used on semicritical medical devices that cannot be sterilized by heat or other sterilization methods. Spor-Klenz Ready To Use can often be accomplished by spraying or wiping with a cloth, applying for 10 minutes at 150°F (65°C) to the device and allowing to dry for 10 minutes. Spor-Klenz Ready To Use is effective against most microorganisms, including all types of bacteria, fungi, and viruses. This solution is for use with and without packaging materials.
