**APIGUARD®**

For the treatment of varroosis due to *Varroa destructor* in honeybees

**KEEP OUT OF REACH OF CHILDREN**

**DANGER**

Manufactured For:
VITA (EUROPE) LIMITED,
c/o Landis International, Inc.,
P.O. Box 5126, Valdosta, GA 31603-5126.
Phone: 800-526-3471

Net Contents: 6.6lbs (3kg) APIGUARD gel

### FIRST AID

**If In Eyes**
- Hold eye open and rinse slowly and gently with water for 15-20 minutes.
- Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.
- Call a poison control center or doctor for treatment advice.

**If Swallowed**
- Call a poison control center or doctor for treatment advice.
- Do not induce vomiting unless told to do so by poison control center or doctor.
- Have person sip a glass of water if able to swallow.
- Do not give anything by mouth to an unconscious person.

**If On Skin Or Clothing**
- Take off contaminated clothing.
- Rinse skin immediately with plenty of water for 15-20 minutes.
- Call a poison control center or doctor for treatment advice.

**If Inhaled**
- Move person to fresh air.
- If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably mouth-to-mouth, if possible.
- Call a poison control center or doctor for treatment advice.

### HOT LINE NUMBER

Have the product container or label with you when calling a poison control center or doctor or going for treatment.

You may also contact CHEMTREC at 800-424-9300 for emergency medical information (24 hrs).

### EPA Reg No. 79671-1
****EPA Establishment No. 083118-GBR-001

**PRECAUTIONARY STATEMENTS**

**HAZARDS TO HUMANS AND DOMESTIC ANIMALS**

**DANGER:** Causes irreversible eye damage. Harmful if swallowed or absorbed through skin. Do not get in eyes, on skin, or on clothing. Wear protective eyewear such as goggles, face shield, or safety glasses. Wear chemical resistant gloves. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco or using the toilet. Remove and wash contaminated clothing before reuse.

**PERSONAL PROTECTIVE EQUIPMENT (PPE)**

Applicators and handlers must wear:
- long-sleeved shirt and long pants
- socks and shoes
- chemical resistant gloves
- protective eyewear (goggles, face shield, or safety glasses)

Follow the manufacturer’s instructions for cleaning/maintaining PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry.

Do not enter or allow personnel to enter into treated areas during the restricted-entry interval (REI) of 48 hours.

APIGUARD® is a registered trademark of Vita (Europe) Limited, Basingstoke, UK
USER SAFETY RECOMMENDATIONS

Users Should:
- Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet.
- Remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
- Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

ENVIROMENTAL HAZARDS

For terrestrial uses. This product is toxic to aquatic invertebrates. Do not apply directly to water, areas where surface water is present or to intertidal areas below the mean high water mark. Drift or runoff from treated areas may be hazardous to aquatic organisms in neighboring areas. Do not contaminate water when disposing of equipment washwaters or rinsate.

PHYSICAL OR CHEMICAL HAZARDS

Do not use, pour, spill or store near heat or open flame. Do not store above 86°F

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirement specific to your State or Tribe, consult the State/Tribal agency responsible for pesticide regulation.

READ ENTIRE LABEL, USE STRICTLY IN ACCORDANCE WITH PRECAUTIONARY STATEMENTS AND DIRECTIONS, AND WITH APPLICABLE STATE AND FEDERAL REGULATIONS.

GENERAL INFORMATION

Failure to follow directions and precautions on this label may result in poor mite control, and/or illegal residues.

APIGUARD is a product specifically designed for use in beehives. The unique slow release gel matrix formulation and easy-to-use dosing syringe ensures correct dosage of the active ingredient thymol. APIGUARD gel regulates the liberation of thymol within the honeybee colony. APIGUARD has no harmful effect on the honeybee colony, neither on brood nor on adults, when used according to directions.

For best results:
- Do not use the product when the maximum daily temperature is lower than 60°F or when the colony activity is very low.
- Do not use the product when the maximum daily temperature is above 105°F.
- Combine weak colonies before treatment.
- Make sure the worker bees can access the tray.

Restrictions:
- Do not treat during honey flow.
- Leave the product in the colony until the trays are empty. In any case remove the product when installing the supers on the colony.
- Remove surplus honey supers before applying treatment.
- Do not enter or allow personnel entry into treated areas during the restricted-entry interval (REI) of 48 hours.

APPLICATION PROCEDURES:
The efficacy of APIGUARD is maximized if the product is used in late summer after the honey harvest (when the amount of brood present is diminishing). However, in the case of severe infestations, APIGUARD can also be used during springtime, when temperatures are above 60°F. Efficacy will vary between colonies due to the nature of the application. Therefore, APIGUARD should be used as one treatment among others within an Integrated Pest Management program, and mite fall regularly monitored. If further significant mite fall is observed during the following winter or spring, use an additional secondary winter or spring treatment for varroa.
METHOD OF ADMINISTRATION:

Open the hive. Place a piece of wax sheet, cardboard or plastic sheet (approximately 4” x 4”), or the provided dosing tray, centrally on top of the brood frames. Stir [product] well before each use. Remove the dosing syringe from its sealed packaging. Insert the syringe nozzle fully into the gel, ensuring no air is drawn into the syringe. Slowly pull the plunger back on the syringe to draw up 51ml (equivalent to 1.76 oz/50g) of Apiguard gel. Remove the syringe from the gel. Gently push the plunger downwards to release the gel within the syringe onto the dosing tray. Flatten out the gel with a hive tool, if necessary. Ensure that there is a free space of at least 1/4 inch between the top of the tray and the hive cover board, for example, by placing an empty super on top of the brood box. Close the hive.

After two weeks apply the second dose of 51ml (equivalent to 1.76 oz/50g) Apiguard gel following the same procedure. Leave the product in the colony for a further 2 to 4 weeks until it totally disappears from the tray or until supers are installed, whichever is sooner. Total treatment period should be a minimum of 4 weeks and a maximum of 6 weeks. At temperatures above 77°F, a lower dosage of 25-26 ml (approximately 0.88 oz/25g) Apiguard gel can be used effectively. At these higher temperatures, only one application of 25-26ml (approximately 0.88 oz/25g) should be applied at any one time. Repeat dose applications may be applied at intervals of 1-2 weeks, as needed for up to 4 applications of 25-26ml (approximately 0.88 oz/25g) where mite infestations persist. Remove any remaining Apiguard gel from the hive before successive applications. Use the dosing syringe as described above to administer the required dose of Apiguard gel.

Small and wintering bee colonies and nuclei require only one dose of 12-13 ml (approximately 0.44 oz/12.5g) to 25-26 ml (approximately 0.88 oz/25g) Apiguard gel (depending on the colony or nucleus size), left in place until the product disappears from the tray. Use the dosing syringe as described above to administer the required dose of Apiguard gel.

Overdose:
The use of a dose higher than 51ml (equivalent to 1.76 oz/50g) of Apiguard gel per application, corresponding to 0.44oz (12.5g) thymol, could cause disturbances in the behavior of the colony (agitation, absconding or increased mortality). In case of overdose, remove the excess product from the colony.

Withdrawal Period:
- Surplus honey supers can be installed immediately after the end of treatment and removal of the APIGUARD product.
- Honey may be harvested immediately upon accumulation of sufficient surplus in the supers.
- Do not use during honey flow.

STORAGE AND DISPOSAL:

Do not contaminate water, food or feed by storage or disposal.

Pesticide Storage: Do not store above 86°F. Do not freeze. Keep unopened in original packaging. Protect from direct sunlight.

Pesticide Disposal: Pesticide wastes are acutely hazardous. Improper disposal of excess pesticide, spray mixture or rinseate is a violation of Federal Law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

Container Handling: Nonrefillable container. Do not reuse or refill this container. Triple rinse (or equivalent) promptly after emptying. Then offer for recycling, if available, or reconditioning, if appropriate, or puncture and dispose of container in a sanitary landfill, or by other procedures approved by State and local authorities.

WARRANTY AND DISCLAIMER STATEMENT

VITA (EUROPE) LIMITED, warrants that this product in its unopened package conforms to the chemical description on the label and is reasonably fit for the purposes set forth on the label when used according to directions under normal use conditions to the crops specified. There are no other warranties, expressed or implied, concerning the use of this product other than indicated on the label. This warranty does not extend to the handling or use of this product contrary to label instructions.

APIGUARD

For the treatment of varroosis due to Varroa destructor in honeybees.

EPA Reg No. 79671-1
EPA Establishment No.: 083118-QBR-001

Net Contents: 6.6 lbs (3kg) APIGUARD gel

Precautionary Statements

Hazard to Humans and Domestic Animals

Causes irreversible eye damage. Harmful if swallowed or absorbed through skin. Do not get in eyes, on skin, or on clothing. Wear protective eyewear such as goggles, face shield, or safety glasses. Wear chemical resistant gloves. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, or using tobacco or the toilet. Remove and wash contaminated clothing before reuse.

Personal Protective Equipment (PPE)

Applicants and handlers must wear:
• long-sleeved shirt and long pants
• socks and shoes
• chemical resistant gloves
• protective eyewear (goggles, face shield, or safety glasses)

Follow the manufacturer’s instructions for cleaning/maintaining PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry.

Environmental Hazards

For terrestrial uses. This product is toxic to aquatic invertebrates. Do not apply directly to water, areas where surface water is present or to intertidal areas below the mean high water mark. Drift or runoff from treated areas may be hazardous to aquatic organisms in neighboring areas. Do not contaminate water when disposing of equipment washwaters or rinsate.

Physical or Chemical Hazards

Do not use, pour, spill or store near heat or open flame.

Directions for Use

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirement specific to your State or Tribe, consult the State/Tribal agency responsible for pesticide regulation.

Read entire label, use strictly in accordance with precautionary statements and directions, and with applicable state and federal regulations.

User Safety Recommendations

Users Should:
• Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet.
• Remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
• Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

HOT LINE NUMBER

Have the product container or label with you when calling a poison control center or doctor or going for treatment. You may also contact CHEMTREC at 800-424-9300 for emergency medical information (24 hours).

USER SAFETY RECOMMENDATIONS

If In Eyes

• Hold eye open and rinse slowly and gently with water for 15-20 minutes.
• Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.
• Call a poison control center or doctor for further treatment advice.

If Swallowed

• Call a poison control center or doctor for treatment advice.
• Do not induce vomiting unless told to do so by the poison control center or doctor.
• Have person sip a glass of water if able to swallow.
• Do not give anything by mouth to an unconscious person.

If On Skin Or Clothing

• Take off contaminated clothing.
• Rinse skin immediately with plenty of water for 15-20 minutes.
• Call a poison control center or doctor for further treatment advice.

If Inhaled

• Move person to fresh air.
• If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably mouth-to-mouth, if possible.
• Call a poison control center or doctor for treatment advice.

If ingested

• Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet.
• Remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
• Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

Environmental Hazards

APIGUARD is a product specifically designed for use in beehives. The unique slow release gel matrix formulation and easy-to-use dosing syringe ensures correct dosage of the active ingredient thymol. APIGUARD gel regulates the liberation of thymol within the honeybee colony. APIGUARD has no harmful effect on the honeybee colony, neither on brood nor on adults, when used according to directions.

For best results:
- Do not use the product when the maximum daily temperature is lower than 60°F or when the colony activity is very low.
- Do not use the product when the maximum daily temperature is above 105°F.
- Combine weak colonies before treatment.
- Make sure the worker bees can access the tray.

Restrictions:
- Do not treat during honey flow.
- Leave the product in the colony until the trays are empty. In any case remove the product when installing the supers on the colony.
- Remove surplus honey supers before applying treatment.
- Do not enter or allow personnel entry into treated areas during the restricted-entry period.
- Remove surplus honey supers before applying treatment.
- Do not treat during honey flow.
- Do not enter or allow personnel entry into treated areas during the restricted-entry period.

METHOD OF ADMINISTRATION:
Open the hive. Place a piece of wax sheet, cardboard or plastic sheet (approximately 4” x 4”), or the provided dosing tray, centrally on top of the brood frames. Stir [product] well before each use. Remove the dosing syringe from its sealed packaging. Insert the syringe nozzle fully into the gel, ensuring no air is drawn into the syringe. Slowly pull the plunger back on the syringe to draw up 51 ml (equivalent to 1.76 oz/50g) of APIGUARD gel. Remove the syringe from the gel. Gently push the plunger downwards to release the gel within the syringe onto the dosing tray. Flatten out the gel with a hive tool, if necessary. Ensure that there is a free space of at least 1/4 inch between the top of the tray and the hive cover board, for example, by placing an empty super on top of the brood box. Close the hive.

After two weeks apply the second dose of 51 ml (equivalent to 1.76 oz/50g) APIGUARD gel following the same procedure. Leave the product in the colony for a further 2 to 4 weeks until it totally disappears from the trays. A second application is optional.

Total treatment period should be a minimum of 4 weeks and a maximum of 6 weeks. At temperatures above 77°F, a lower dosage of 25-26 ml (approximately 0.88 oz/25g) APIGUARD gel can be used effectively. At these higher temperatures, only one application of 25-26ml (approximately 0.88 oz/25g) should be applied at any one time. Repeat dose applications may be applied at intervals of 1-2 weeks, as needed for up to 4 applications of 25-26ml (approximately 0.88 oz/25g) where mite infestations persist. Remove any remaining adult mites from the hive before successive applications. Use the dosing syringe as described above to administer the required dose of APIGUARD gel.

Small and wintering bee colonies and nuclei require only one dose of 12-13 ml (approximately 0.44 oz/12.5g) to 25-26 ml (approximately 0.88 oz/25g) APIGUARD gel (depending on the colony or nucleus size), left in place until the product disappears from the tray. Use the dosing syringe as described above to administer the required dose of APIGUARD gel.

Overdose:
The use of a dose higher than 51 ml (equivalent to 1.76 oz/50g) of APIGUARD gel per application, corresponding to 0.44oz (12.5g) thymol, could cause disturbances in the behavior of the colony (agitation, absconding or increased mortality). In case of overdose, remove the excess product from the colony.

APPLICATION PROCEDURES:
APPLICATION PROCEDURES:

The efficacy of APIGUARD is maximised if the product is used in late summer after the honey harvest (when the amount of brood present is diminishing). However, in the case of severe infestations, APIGUARD can also be used during springtime, when temperatures are above 60°F. Efficacy will vary between colonies due to the nature of the application. Therefore, APIGUARD gel should be used as one treatment among others within an Integrated Pest Management program, and hive mite regularly monitored.

If further significant mite fall is observed during the following winter or spring, use an additional secondary winter or spring treatment for varroa.

READ ENTIRE LABEL, USE STRICTLY IN ACCORDANCE WITH PRECAUTIONARY STATEMENTS AND DIRECTIONS, AND WITH APPLICABLE STATE AND FEDERAL REGULATIONS.

GENERAL INFORMATION

Failure to follow directions and precautions on this label may result in a harmful effect on the honeybee colony, neither on brood nor on adults, the liberation of thymol within the honeybee colony. A PIG U A R D has no poor mite control, and/or illegal residues.

Correct dosage of the active ingredient thymol. A PIG U A R D gel regulates unique slow release gel matrix formulation and easy-to-use tray ensures A PIG U A R D is a product specifically designed for use in beehives. The efficacy of A PIG U A R D is maximized if the product is used in late summer when used according to directions.

When used according to directions.

METHOD OF ADMINISTRATION:
Open the hive. Peel back the foil lid of the A PIG U A R D tray leaving one corner of the lid attached to the tray. Place the open tray centrally on top of the brood frames, gel side up. Ensure that there is a free space of at least ¼ inch between the top of the tray and the hive cover board, for example, by placing an empty super on top of the brood box. Close the hive. After two weeks replace the first tray with a new one, according to the same instructions. Leave the product in the colony until the tray is empty. Remove the product when installing the supers on the colony.

Overdose:
The use of a dose higher than 1.76oz (50g) of A piguard gel per application, corresponding to 0.44oz (12.5g) thymol, could cause increased mortality. In case of overdose, remove the excess product from the colony.

Restrictions:
Do not treat during honey flow.
Leave the product in the colony until the trays are empty. In any case remove the product if installing the supers on the colony.
Remove surplus honey supers before applying treatment.
Do not enter or allow personnel entry into treated areas during the restricted-entry interval (REI) of 48 hours.

APPLICATION PROCEDURES
The efficacy of A PIG U A R D is maximized if the product is used in late summer after the honey harvest (when the amount of brood present is diminishing). However, in the case of severe infestations, A PIG U A R D can also be used after the honey harvest (when the amount of brood present is diminishing). Therefore, A PIG U A R D should be used as one treatment among others within an Integrated Pest Management program, and mite fall regularly monitored. If further significant mite fall is observed during the following winter or spring, use an additional secondary winter or spring treatment for varroa.

Withdrawal Period:
Surplus honey supers can be installed immediately after the end of treatment and removal of the A PIG U A R D product. Honeycomb made by the honey bees during the application is not contaminated and is safe for consumption.

Do not use during honey flow.

STORAGE AND DISPOSAL
Do not contaminate water, food or feed by storage or disposal.

Pesticide Storage: Do not store above 86°F. Do not freeze. Keep under controlled indoor packaging only. Protect from direct sunlight.

Pesticide Disposal: Pesticide wastes are acutely hazardous. Improper disposal of excess pesticide, spray mixture or rinsate is a violation of Federal Law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Protection Agency, or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

Container Handling: Nonrefillable container. Do not reuse or refill this container. Rinse or (equivocably) equivalent promptly after emptying. Then offer for recycling, if available, or recondition, if appropriate, or puncture and dispose of container in a sanitary landfill, or by other procedures approved by State and local authorities.

WARNING AND DISCLAIMER STATEMENT
VITA (EUROPE) LIMITED, warrants that this product in its unopened package conforms to the chemical description on the label and is reasonably fit for the purposes set forth on the label when used according to directions under normal use conditions to the crops specified. There are no other warranties, expressed or implied, concerning the use of this product other than indicated on the label. This warranty does not extend to the handling or use of this product contrary to label instructions. Batch No. & Expiry Date: See base of carton and lid label.

HOT LINE NUMBER

Have the product container or label with you when calling a poison control center or doctor or going for treatment.

You may also contact CHEMTREC at 800-424-9300 for emergency medical information (24 hrs).

Have the product container or label with you when calling a poison control center or doctor or going for treatment.

See leaflet inside the box for entire label, precautionary statements and directions before use.
PRECAUTIONARY STATEMENTS
HAZARDS TO HUMANS AND DOMESTIC ANIMALS

DANGER: Causes irreversible eye damage. Harmful if swallowed or absorbed through skin. Do not get in eyes, on skin, or on clothing. Wear protective eyewear such as goggles, face shield, or safety glasses. Wear chemical resistant gloves. Wash thoroughly with soap and water after handling. Remove and wash contaminated clothing before reuse.

PERSONAL PROTECTIVE EQUIPMENT (PPE)
Applicators and handlers must wear:
- long-sleeved shirt and long pants
- socks and shoes
- chemical resistant gloves
- protective eyewear (goggles, face shield, or safety glasses)

Follow the manufacturer’s instructions for cleaning/maintaining PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry. Do not enter or allow personnel to enter into treated areas during the restricted-entry interval (REI) of 48 hours.

ENVIRONMENTAL HAZARDS
For terrestrial uses. This product is toxic to aquatic invertebrates. Do not apply directly to water, areas where surface water is present or to intertidal areas below the mean high water mark. Drift or runoff from treated areas may be hazardous to aquatic organisms in neighboring areas. Do not contaminate water when disposing of equipment washwaters or rinseate.

PHYSICAL OR CHEMICAL HAZARDS
Do not use, pour, spill or store near heat or open flame. Do not store above 86°F.

DIRECTIONS FOR USE
It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirement specific to your State or Tribe, consult the State/Tribal agency responsible for pesticide regulation.

READ ENTIRE LABEL, USE STRICTLY IN ACCORDANCE WITH PRECAUTIONARY STATEMENTS AND DIRECTIONS, AND WITH APPLICABLE STATE AND FEDERAL REGULATIONS.

USER SAFETY RECOMMENDATIONS
Users Should:
• Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet.
• Remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
• Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

**APPLICATION PROCEDURES**

**APPLICATION PROCEDURES**: The efficacy of APIGUARD is maximized if the product is used in late summer after the honey harvest (when the amount of brood present is diminishing). However, in the case of severe infestations, APIGUARD can also be used during springtime, when temperatures are above 60°F. Efficacy will vary slightly due to the nature of the application. Therefore, APIGUARD should be used as one treatment among others within an Integrated Pest Management program, and mite fall regularly monitored. If further significant mite fall is observed, over-treating the following winter or spring, use an additional secondary winter or spring treatment for varroa. At temperatures above 77°F, a treatment using 0.88 oz (25 g) or 3 x 0.88 oz (25 g) Apiguard can be used effectively. A fourth dose of 0.88 oz (25 g) gel can be applied at these temperatures, where mite infestations persist.

**METHOD OF ADMINISTRATION**:

Open the hive. Place the dosing tray provided (approximately 4” x 4”) centrally on top of the brood frames. Tear open the Apiguard sachet at the tear notch and squeeze out the sachet contents onto the dosing tray or surface. Ensure that there is a free space of at least 1/4 inch between the top of the tray and the hive cover board, for example, by placing an empty super on top of the brood box. Close the hive. After one week replace with a second dose of 0.88 oz (25 g) Apiguard gel. After the second dose, apply a third dose of 0.88 oz (25 g) Apiguard, following the same procedure. Where mite infestations are high, a fourth dose of 0.88 oz (25 g) Apiguard can be introduced one to two weeks later. Leave the product in the colony for another 4 weeks. After 4 weeks, the Varroa population will have decreased significantly. Re-treat the colony at 4 week intervals if Varroa mite infestations persist. The Varroa infestation period should be a minimum of 4 weeks and a maximum of 6 weeks. Overdose: The use of a dose higher than 1.76 oz (50 g) of Apiguard gel per application, corresponding to 0.44 oz (12.5 g) thymol, could cause disturbances in the behavior of the colony (agitation, absconding or increased mortality). At temperatures above 77°F, the dose can be reduced to 1 x 0.88 oz (25 g) per application. In case of overdose, remove the excess product from the colony.

**STORAGE AND DISPOSAL**

Do not contaminate water, food or feed by storage or disposal. **Pesticide Storage:** Do not store above 86°F. Do not freeze. Keep unopened in original packaging. Protect from direct sunlight. **Container Handling:** Non-refillable container. Do not reuse or refill this container. Triple rinse (or equivalent) promptly after emptying. Then offer for recycling, if available, or reconditioning, if appropriate, or puncture and dispose of container in a sanitary landfill, or by other procedures approved by State and local authorities.

**WARRANTY AND DISCLAIMER STATEMENT**

VITA (EUROPE) LIMITED, warrants that this product in its unopened package conforms to the chemical description on the label and is reasonably fit for the purposes set forth on the label when used in accordance with directions under normal use conditions. This warranty does not extend to the handling or use of this product contrary to label instructions. **Batch No. & Expiry Date:** See crimp seal of sachet.
