Important: Do not use on seed potatoes.

Wetness of the potatoes at the time the solution is applied, the potato variety (russet vs. smooth skin types) and the wetness of the potatoes after treatment.

Keep out of reach of children.

Toxicity:

Upon purchase of this product, purchaser and user agree to the following terms:

EQUIPMENT:

KEEP OUT OF REACH OF CHILDREN

Damage to the

APPLICATION:

For more information about PACE’s products, their uses and benefits, consult your PACE representative or our website at www.paceint.com.

DO NOT APPLY IN THE FIELD.

DO NOT USE ON SEED POTATOES: This product will kill emerging buds on potato tubers and therefore should NOT be used on potatoes that will be used for seed. The damage to the emerged buds is permanent although secondary buds may grow after 30 to 90 days. The time period of effective spread suppression may vary depending on many conditions beyond the control of the manufacturer and/ or seller, including, but not limited to, timing and method of applications of spray or dusts. Wash contaminated equipment thoroughly with soap and hot water before use on seed potatoes.

Equipment: Biox®-15EC is usually applied on a 0.5% to 1.0% emulsion wash on the drying table, or similar surface, after the potatoes have been washed. Equipment should be set to apply an emulsion evenly on the potatoes moving across the rollers. Rolling or tumbling action greatly improves coverage compared to flat conveyor belts. Thorough coverage of the potatoes by the emulsion will provide the best results. For further information about application equipment, contact your local Biox® Distributor Representative.

Application: Proper treatment solutions (of 0.5% to 1.0% Biox®-15EC) may be prepared by adding Column B to Column C.

Column A

Column B

Column C

Amp of Product (gal) 0.83% (8,300 ppm) 1 15.0
1.00% (10,000 ppm) 1 16.0
1.21% (12,100 ppm) 1 13.5
1.40% (14,000 ppm) 1 11.0
1.59% (15,900 ppm) 1 10.0
1.94% (19,400 ppm) 1 8.5

* These percentages are based on v/v ratio and are rounded to the nearest 0.10%. Placed within the treatment volume is expected to result in a 10% to 20% reduction in the effective amount of this product.

Harmful if swallowed. Maybe harmful if inhaled. Causes skin and eye irritation. May cause respiratory irritation and allergy or asthma symptoms or breathing difficul-

As humidity, temperature and airflow), and other causes which are unrelated to the application of this product, and which may occur whether or not this product is applied to the potatoes.

WASTE DISPOSAL:

Triple rinse (or equivalent). Then offer for recycling or reconditioning, or puncture and dispose of in a sanitary landfill, or by other procedures approved by the regulatory agency.

For a food application system, use a sufficient emulsified solution of the desired concentration and apply in a method to provide thorough coverage/ washing of the potatoes. The effective- ness of this product is based on uniform coverage but a minimum residue concentration of approximately 10 ppm on the potato after treatment is necessary.

In addition, the extent of peeper/sprout development, the cleanness of the potatoes at the time the solution is applied, the potato variety (russet vs. smooth skin types) and the wetness of the potatoes after treatment.

NOTE: Thorough agitation at initial mixing is required — no further agitation needed after the emulsion is completely mixed.

Toxicity:

As humidity, temperature and airflow), and other causes which are unrelated to the application of this product, and which may occur whether or not this product is applied to the potatoes.
