KEEP OUT OF REACH OF CHILDREN

ACTIVE INGREDIENTS

NET CONTENTS: 9.5 FL. OZ. (147 mL)

DIRECTIONS FOR USE: It is a violation of Federal Law to use this product in a manner inconsistent with its labeling. See water container for additional directions for use. Sanitation of Interior Surfaces of Water Softeners: Sanitization is to occur after initial installation, after the system is serviced and periodically during its use. 1. Backwash the softener and add 1 ounce of sanitizer per 8 gallons of water (200 ppm active quaternary) to the brine tank inlet. (NOTE: One packet will treat a residential softener. Standard system capacity is 48 gallons.) (The brine tank should have water in it to permit the solution to be carried into the softener.) 2. Proceed with the normal regeneration or interrupt the cycle after the brining step and let the softener soak for a minimum of 60 seconds. 3. Backwash the softener with potable water to make sure all sanitizing solution is thoroughly rinsed from the unit before returning it to service.
