RESTRICTED USE PESTICIDE
DUE TO POTENTIAL SECONDARY TOXICITY TO NONTARGET ORGANISMS
For retail sale to and use only by Certified Applicators or persons under their
direct supervision and only for those uses covered by the Certified
Applicator’s certification.

SUPPLEMENTAL LABEL
FOR DISTRIBUTION AND USE ONLY WITHIN THE STATE OF WASHINGTON

rozol® Pellets
FOR CONTROL OF MOUNTAIN BEAVER IN FOREST PLANTATIONS
EPA SLN No. WA-060019  EPA Reg. No. 7173-151

DIRECTIONS FOR USE:
• It is a violation of Federal Law to use this product in a manner inconsistent with its labeling.
• This labeling must be in the possession of the user at the time of application.
• Follow all applicable directions, restrictions and precautions on the EPA registered label.
• This product can be used for forestry sites, including conifer site preparation areas.
• Not for use on recreational sites, Christmas tree plantations or in ornamental plantings.

General Information: Mountain beavers (Aplodontia rufa) are active for short durations throughout the day, but are usually
more active in the evening. Surface activity is usually fairly close to their burrows, although they can range over several acres
if food is not plentiful. Mountain beaver burrows can be located by observing feeder holes or freshly pushed dirt. There may
be several entrances to the mountain beaver burrow system. Mountain beavers exhibit caching and hoarding behavior and
are likely to move the bait packet into their burrow. Abandoned burrows are frequently revisited by mountain beavers from
surrounding areas, and cached bait may control invading animals.
Baiting should be used as one component of an Integrated Pest Management (IPM) approach to mountain beaver control,
including trapping and population monitoring. Research has found that trapping in conjunction with baiting is the most
effective method of control.

Use Rate / Bait Placement: Do not tear open the packets of bait. Place one unopened packet of bait inside two feeder holes
or active runways of each active mountain beaver burrow system (i.e. one packet per hole or runway, two packets per burrow
system). Insert bait packets at least 12 inches into hole or runway.
Application Timing: Applications made between October and February have been found to be most effective at reducing
damage to tree seedlings planted in late winter or early spring. Baiting from mid-May to mid-September when juvenile
mountain beavers are present is not permitted, due to concerns with secondary poisoning of non-target animals. Do not apply
more than once per season.

REstrictions / Precautions:
Do not apply this product in a way that will contact workers or other persons. Only protected handlers may be in the area
during application. For control of mountain beavers only. Use of Rozol for control of mountain beaver in forest plantations is
limited to western Washington only. Do not apply this product to forest plantations located in eastern Washington.
Do not broadcast bait. Do not apply this product by any method not specified on this label. Pick up and properly dispose of
any spilled bait that cannot be recovered for use. Keep away from humans, domestic animals and pets during application,
handling and storage.
This pesticide is toxic to fish and wildlife. Rozol Pellets should not be used under this SLN label where impact on listed
threatened or endangered species is likely. Do not apply this product from mid-May to mid-September when juvenile
mountain beavers are present, due to concerns with secondary poisoning of non-target animals. Do not apply this product
directly to water or within 10 feet of surface water (i.e. streams, rivers, lakes). You may refer to the WSDA Endangered
Species Program web site at http://agr.wa.gov/PestFert/NatResources/EndangSpecies.aspx, or contact the Washington
Department of Fish & Wildlife, National Marine Fisheries Service (NOAA Fisheries) or US Fish & Wildlife Service for
information regarding aquatic species listed as threatened or endangered. Consult the Federal label for additional restrictions
and precautions to protect aquatic organisms.

This label for Rozol Pellets expires and must not be distributed or used in accordance with this SLN registration after
December 31, 2016.
