RESTRICTED USE PESTICIDE
Toxic to fish, mammals, and aquatic organisms.
For retail sale to and use only by certified applicators or persons under their direct supervision, and only for those uses covered by the certified applicator’s certification.

REAPER™ 0.15 EC
GROUP 6 INSECTICIDE

MITICIDE/INSECTICIDE
ACTIVE INGREDIENT:
Abamectin* (CAS No. 65195-56-4 and No. 65195-55-3) .................................................. 2.0%
OTHER INGREDIENTS: ............................................................................................................. 98.0%
TOTAL .................................................................................................................................. 100.0%
*1 gal. contains 0.15 lb abamectin

KEEP OUT OF REACH OF CHILDREN
WARNING—AVISO
Si usted no entiende la etiqueta, busque a alguien para que se la explique a usted en detalle. (If you do not understand the label, find someone to explain it to you in detail.)
See additional Precautionary Statements and Directions For Use in booklet.

FORMULATED FOR
LOVELAND PRODUCTS, INC., P.O. BOX 1258, GREELEY, COLORADO 80632-1258
FIRST AID

If swallowed:
- Call poison control center or doctor immediately for treatment advice.
- Do not give any liquid to the person.
- Do not induce vomiting unless told to do so by the poison control center or doctor.
- Do not give anything by mouth to an unconscious person.

If in eyes:
- Hold eye open and rinse slowly and gently with water for 15-20 minutes.
- Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.
- Call a poison control center or doctor for treatment advice.

If on skin or clothing:
- Take off contaminated clothing.
- Rinse skin immediately with plenty of water for 15-20 minutes.
- Call a poison control center or doctor for treatment advice.

If inhaled:
- Move person to fresh air.
- If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably by mouth-to-mouth, if possible.
- Call a poison control center or doctor for further treatment advice.

Have the product container or label with you when calling a poison control center or doctor, or going for treatment.

Note to Physician: Early signs of intoxication include dilation of pupils, muscular incoordination, and muscular tremors. Toxicity following accidental ingestion of this product can be minimized by early administration of chemical adsorbents (e.g., activated charcoal).

If toxicity from exposure has progressed to cause severe vomiting, the extent of resultant fluid and electrolyte imbalance should be gauged. Appropriate supportive parenteral fluid replacement therapy should be given, along with other required supportive measures (such as maintenance of blood pressure levels and proper respiratory functionality) as indicated by clinical signs, symptoms, and measurements.

In severe cases, observations should continue for at least several days until clinical condition is stable and normal. Since atamantin is believed to enhance GABA activity in animals, it is probably wise to avoid drugs that enhance GABA activity (barbiturates, benzodiazepines, valproic acid) in patients with potentially toxic atamantin exposure.

FOR A MEDICAL EMERGENCY INVOLVING THIS PRODUCT CALL: 1-888-944-8585.

PRECAUTIONARY STATEMENTS
HAZARDS TO HUMANS AND DOMESTIC ANIMALS

WARNING—AVISO

May be fatal if swallowed. Causes substantial but temporary eye injury. Do not get in eyes or on clothing. Harmful if inhaled or absorbed through the skin. Avoid breathing spray mist. Avoid contact with skin. Prolonged or frequently repeated exposure may cause allergic skin reactions in some individuals.

Personal Protective Equipment
Some materials that are chemical-resistant to this product are listed below. If you want more options, follow the instructions for Category B on an EPA chemical-resistance category selection chart.
Applicators and other handlers must wear:
• Coveralls worn over short-sleeved shirt and short pants,
• Chemical-resistant gloves - EPA chemical-resistance category B (e.g., barrier laminate or butyl rubber ≥ 14 mils),
• Chemical-resistant footwear plus socks,
• Protective eyewear,
• Chemical-resistant headgear for overhead exposure,
• Chemical-resistant apron when cleaning equipment, mixing, or loading.

Discard clothing and other absorbent materials that have been drenched or heavily contaminated with this product's concentrate. Do not reuse them. Follow manufacturer's instructions for cleaning/maintaining PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry.

USER SAFETY RECOMMENDATIONS
Users should:
• Wash hands before eating, drinking, chewing gum, using tobacco, or using the toilet.
• Remove clothing immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.

ENVIRONMENTAL HAZARDS
This pesticide is toxic to fish and wildlife. Do not apply directly to water, to areas where surface water is present, or to intertidal areas below the mean high water mark. Do not apply when weather conditions favor drift from target areas. Do not contaminate water when disposing of equipment wash water or rinsate. This product is highly toxic to bees exposed to direct treatment or residues on blooming crops or weeds. Do not apply this product or allow it to drift to blooming crops or weeds if bees are visiting the treatment area.

Use of this product may pose a risk to threatened and endangered species of fish, amphibians, crustaceans (including fresh water shrimp), and insects. All use of this product in the state of California should comply with the recommendations of the California Endangered Species Project. Before using this product in California, consult with your county agriculture commissioner to determine use limitations that apply to your area.

PHYSICAL OR CHEMICAL HAZARDS
Combustible. Do not use or store near heat or open flame.

ATTENTION
This product contains a chemical (N-methyl pyrrolidone) known to the state of California to cause birth defects or other reproductive harm.

DIRECTIONS FOR USE
RESTRICTED USE PRODUCT
It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

AGRICULTURAL USE REQUIREMENTS
Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training.
Agricultural Use Requirements Cont'd:

decommission, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry interval. The requirements in this box only apply to users of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted-entry interval (REI) of 12 hours. PPE required for entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water is:

- Coveralls over short-sleeved shirt and short pants,
- Chemical-resistant gloves - EPA chemical-resistance category B (e.g., barrier laminate or butyl rubber ≥ 14 mils),
- Chemical-resistant footwear plus socks,
- Protective eyewear,
- Chemical-resistant headgear for overhead exposure.

Failure to follow directions and precautions on this label may result in crop injury, poor pest control, and/or illegal residues.

General Information

Reaper® 0.15 EC is an emulsifiable concentrate that will control certain pests on the crops listed on this label when the product is applied according to the Directions for Use. Thorough coverage of foliage is essential for good mite and insect control.

Note:

- Phytotoxicity: Reaper 0.15 EC has been tested for phytotoxicity and has a wide margin of safety on a variety of crops. Reaper 0.15 EC has also been shown to be compatible with many commonly used pesticides, crop oils, and nutritional sprays. However, since it is not possible to test a large number of possible mixtures, the user should pre-test any proposed mixtures with Reaper 0.15 EC to ensure the physical compatibility and lack of phytotoxic effects.
- New York State Restrictions: Do not apply Reaper 0.15 EC with aircraft in New York State.

Chemigation

Do not apply this product through any type of irrigation system.

Spray Drift

Responsibility

Avoiding spray drift at the application site is the responsibility of the applicator. The interaction of many equipment and weather related factors determine the potential for spray drift. The applicator is responsible for considering all of these factors when making application decisions. NOTE: When states have more stringent regulations, they must be observed.

Spray Drift Precautions for Application with Aircraft or Ground Application Equipment

- Apply Reaper 0.15 EC only when wind velocity favors on target product deposition (approximately 3 to 10 mph).
- Do not apply with ground application equipment within 25 ft. of or with aircraft within 150 ft. of lakes, reservoirs, rivers, permanent streams, marshes, pot holes, natural ponds, estuaries, or commercial fish farm ponds.
- Do not cultivate within 25 ft. of the aquatic area to allow growth of a vegetative filter strip.
- Do not allow this product to drift onto non-target areas. Drift may result in illegal residues or injury to non-target species. Risk of
exposure to sensitive areas can be reduced by applying this product when the wind direction is away from the sensitive area.
• Do not apply when the weather conditions may cause drift.
• Avoid application when the temperature is high and/or the humidity is low. These conditions increase the evaporation of spray droplets and the likelihood of drift to aquatic areas.
• Do not apply when wind speed or wind gusts are greater than 15 mph.
• Do not apply when wind speed is below 2 mph because wind direction will vary and there is a high potential for inversion.
• Observe the following precautions when using ground application to spray tree crops or hogs in the vicinity of aquatic areas such as lakes, reservoirs, permanent streams, marshes, potholes, natural ponds, or commercial fish ponds:
  • Do not apply Reapex 0.15 EC when weather conditions favor drift to aquatic areas.
  • Do not apply within 110 ft. upwind of aquatic areas or when wind speed is above 8 mph.
  • Spray last 3 rows windward of aquatic areas using nozzles on one side only, with spray directed away from the aquatic areas.
  • Avoid spraying over tops of trees by adjusting or turning off top nozzles. Shut off nozzles on the side away from the grove/orchard when spraying the outside row. Shut off nozzles when turning at ends of rows and passing tree gaps in rows.

Spray Drift Precautions for Aerial Application
Drift Management Requirements
The following drift management requirements must be followed to avoid off-target movement from aerial applications to agricultural field crops.
Outermost Nozzle Distance
The distance of the outermost nozzles on the boom must not exceed 3/4 the length of the wingspan or rotor.

Nozzle Direction
Nozzles must always point backward parallel with the air stream and never be pointed downwards more than 45 degrees.
Maximum Wind Speed
Do not apply when wind speed is greater than 15 mph.
Droplet Size
The most effective way to reduce drift potential is to apply large droplets. The best drift management strategy is to apply the largest droplets that provide sufficient coverage and control. Applying larger droplets reduces drift potential but will not prevent drift if applications are made improperly, or under unfavorable environmental conditions (see Wind, Temperature and Humidity, and Temperature Inversions).

Controlling Droplet Size
Volume
Use high flow rate nozzles to apply the highest practical spray volume. Nozzles with higher rated flows produce larger droplets.
Pressure
Do not exceed the nozzle manufacturer's recommended pressures. For many nozzle types, lower pressure produces larger droplets. When higher flow rates are needed, use higher flow rate nozzles instead of increasing pressure.
Number of Nozzles
Use the minimum number of nozzles that provide uniform coverage.
Nozzle Orientation
Orienting nozzles so that the spray is released parallel to the air stream produces larger droplets than other orientations and is the recommended practice. Significant deflection from horizontal will reduce droplet size and increase drift potential.
Nozzle Type
Use a nozzle type that is designed for the intended application. With most nozzle types, narrower spray angles produce larger droplets. Consider using low-drift nozzles. Solid stream nozzles oriented straight back produce the largest...
dripets and the lowest drift.

**Boom Length**
For some use patterns, reducing the effective boom length to less than 3/4 of the wing span or rotor length may further reduce drift without reducing swath width.

**Application Height**
Applications should not be made at a height greater than 10 ft above the top of the target plants unless a greater height is required for aircraft safety. Making applications at the lowest height that is safe reduces exposure of droplets to evaporation and wind.

**Swath Adjustment**
When applications are made with a cross wind, the swath will be displaced downwind. Therefore, on the up and downwind edges of the field, the applicator must compensate for this displacement by adjusting the path of the aircraft upward.

**Wind**
Drift potential is lowest between wind speeds of 2-10 mph. However, many factors, including droplet size and equipment type determine drift potential at any given speed. Application must be avoided below 2 mph due to variable wind direction and high inversion potential.

**NOTE:** Local terrain can influence wind patterns. Every applicator should be familiar with local wind patterns and how they affect spray drift.

**Temperature and Humidity**
To compensate for evaporation when applying Reaper 0.15 EC in low relative humidity, set up equipment to produce larger droplets. Evaporation of droplets is most severe when conditions are both hot and dry.

**Temperature Inversions**
Reaper 0.15 EC must not be applied during a temperature inversion because the potential for drift is high. Temperature inversions restrict vertical air mixing, and this causes small, suspended droplets to remain in a concentrated cloud. This cloud can move in unpredictable directions due to the light variable winds that are common during inversions. Temperature inversions are characterized by temperatures that increase with altitude and are common on nights with limited cloud cover and light to no wind. Inversions begin to form as the sun sets and often continue into the morning. Their presence can be indicated by ground fog; however, if fog is not present, the movement of smoke from a ground source or an aircraft smoke generator can also identify inversions. Smoke that layers and moves laterally in a concentrated cloud (under low wind conditions) indicates an inversion, while smoke that moves upward and rapidly dissipates, indicates good vertical air mixing.

**Resistance Management**
Reaper 0.15 EC is a Group 6 insecticide (contains the active ingredient abamectin). Because of the inherent risks of pests developing resistance to any product, it is strongly advised that Reaper 0.15 EC be used in a sound resistance management program. Treatment may not be effective against labeled pests if insect or mite-tolerant strains develop. When applying Reaper 0.15 EC to plants that are hosts of labeled pests with multiple generations per crop per year, use resistance management practices.

Resistance management practices may include, but are not limited to:
- Rotating Reaper 0.15 EC with other products with different modes of action.
- Avoiding treatment of successive generations with Reaper 0.15 EC.
- Using labeled rates of the specified spray intervals.
- Using non-chemical alternatives such as beneficial arthropods.
- Rotating susceptible to non-susceptible plants, and
- Using various cultural practices.

For additional information regarding the implementation of these or other resistance management practices, consult your local agricultural advisor or company representative.
CROP USE DIRECTIONS

Almonds and Walnuts

For control of European red mite, Pacific spider mite, Strawberry spider mite, and Twospotted spider mite

Reaper 0.15 EC may be applied using conventional dilute or concentrate sprayers calibrated to deliver sufficient water for thorough coverage. Gallons of spray will vary with size and number of trees per acre and density of foliage. In any case, thorough coverage is essential for good spider mite and insect control.

Horticultural Spray Oil

| (not a dormant oil)      | 0.25% or 1 pt./A   | Minimum of 1 pt./A      | (See Use Restrictions) |

¹ The rate of Reaper 0.15 EC per 100 gals. is based on a volume of 400 gals./A dilute spray.

² To determine the amount of product per acre for concentrate sprays, first determine the amount that would be required in a full-cover dilute spray. Use the same amount of product per acre in concentrate sprays that would be required for dilute sprays to the same orchard/grove. This may result in use of less than 10 g. oz./A on small trees.

Use Restrictions - Almonds and Walnuts

PHC: Do not apply within 21 days of harvest.
Application Method: Ground application only. Do not apply with aircraft.
Amount of Water: Do not apply in less than 40 gals. of water/acre.
Application Interval: If a second application is necessary, wait at least 21 days before repeating application.
Maximum Amount per Application: Do not apply more than 20 g. oz. of Reaper 0.15 EC per application.

Applications per Season: Do not make more than 2 applications per growing season.
Maximum Amount per Season: Do not apply more than 40 g. oz./A in a growing season.
Grazing: Do not allow livestock to graze in treated orchards.

Appplies

For control of European red mite, McDaniel spider mite, Tentiform leafminer, Twospotted spider mite, and White apple leafhopper
Reaper 0.15 EC may be applied using conventional dilute or concentrate ground application sprayers calibrated to deliver sufficient water for thorough coverage. Gallons of spray will vary with size and number of trees per acre and density of foliage. In any case, thorough coverage is essential for good spider mite and insect control.

**NOTE:**
- For best results, apply in combination with horticultural spray oil (not a dormant oil) as directed. Applications without horticultural spray oil may result in reduced efficacy and/or residual control.
- When used alone or when other products are applied sequentially, Reaper 0.15 EC in combination with horticultural spray oil may injure the fruit of certain apple varieties (e.g., russetting on light-skinned varieties such as Golden Delicious).
- When using Reaper 0.15 EC plus horticultural spray oil, carefully follow the Directions for Use and Precautions on the horticultural spray oil label as well as the precautions in official spray guides or on product labels. For example, applying Reaper 0.15 EC plus horticultural spray oil in less than 14 days before or after applying Captan® can result in phytotoxicity and crop loss.

</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>• Spider Mites: For best results, apply before a threshold of 5 spider mines per leaf is reached. Residual spider mite control with Reaper 0.15 EC in combination with horticultural spray oil (not a dormant oil) is greater from spray deposits on newer leaves compared to older. Applications of Reaper 0.15 EC for spider mite control should be limited to a period extending from petal fall through 6 weeks following petal fall.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>• Tentiform Leafminer: For best results, apply against egg (to control new hatch) and early sap feeder stages of first and second generation tentiform leafminers when locally established thresholds have been reached. Do not apply during bloom.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>• White Apple Leafhopper (Not for use west of the Rocky Mountains): Application of Reaper 0.15 EC is limited only to first generation white apple leafhoppers. Apply soon after petal fall in combination with horticultural spray oil (not a dormant oil).</td>
</tr>
</tbody>
</table>
The rate of Reaper 0.15 EC per 100 gals. is based on a volume of 400 gals./A dilute spray.

To determine the amount of product per acre for concentrate sprays, first determine the amount that would be required in a full cover dilute spray. Use the same amount of product/A in concentrate sprays as would be required for the dilute sprays to the same orchard/grove. This may result in use of less than 10 ft. oz./A on small trees.

**Use Restrictions - Apples**

**PHI:** Do not apply within 28 days of harvest.

**Application Method:** Ground application only. Do not apply with aircraft.

**Amount of Water:** Do not apply in less than 40 gals./A or water/A. Maximum Amount per Application: Do not apply more than 20 ft. oz. of Reaper 0.15 EC/A per application.

**Application Interval:** If a second application is necessary, wait at least 21 days before repeating application.

**Number of Applications:** Do not make more than 2 applications per growing season.

**Maximum Amount per Season:** Do not apply more than 40 ft. oz./A in a growing season.

**Grazing:** Do not allow livestock to graze in treated orchards.

**Avocados**

**For control of Avocado thrips**

**NOTE:** Reaper 0.15 EC may be applied using ground application equipment or aircraft. Aerial application is permitted because of its importance to the avocado growing industry. However, aerial application is not the preferred method of application for the best control of thrips. With aerial application, spray coverage and the resulting control of thrips is less than with ground application. For this reason, the user accepts all liability for the level and duration of control of thrips when Reaper 0.15 EC is aerially applied.

Gallons of spray will vary with size and number of trees per acre and density of foliage. In any case, thorough coverage is essential for good mite and insect control.

**Use Restrictions - Avocados**

P&D: Do not apply within 14 days of harvest.

Application Method: Ground and aerial application permitted.

Amount of Water: Do not apply in less than 100 gals. of water with ground equipment or 50 gals. of water with aircraft.

Application Interval: Wait at least 30 days before repeating application.

Number of Applications: Do not make more than 2 applications per season.

**Celeriac (Apium graveolens)**

For control of Twospotted spider mite

Resper 0.15 EC may be applied using conventional dilute or concentrate sprayers. Thorough coverage of the crop canopy is essential for optimum results. Inadequate crop coverage may result in reduced control. Calibrate sprayer to deliver sufficient water for thorough coverage of the foliage.

### Celeriac

<table>

<tr>
<td></td>
<td></td>
<td>• Apply when mites first appear and repeat as necessary to maintain control.</td>
</tr>
</tbody>
</table>

**Use Restrictions - Celeriac**

P&D: Do not apply within 7 days of harvest.

Application Method: Apply with ground application equipment

Amount of Water: Do not apply less than 20 gals. of water/acre.

Application Interval: Wait at least 7 days before repeating application.

Number of Applications: Do not make more than 2 sequential applications of Resper 0.15 EC or any other foliarly applied abamectin containing product.

Maximum Amount per Season: Do not apply more than 48 fl. oz./A after transplanting.

**Citrus Fruit Crop Group**

Some of the crops in this group are: Citrus citron, Citrus hybrids, Citrus species (includes chinonja, langela, tangor), Grapefruit, Kumquat, Lemon, Lime, Mandarin (tangerine), Sour orange, and Sweet orange.

For control of Asian citrus psylla, Broad mite, Citrus bud mite, Citrus leafminer, Citrus rust mite, Citrus thrrips, and Twospotted spider mite.

Thorough spray coverage is essential for good mite and insect control. Spray gallonage
may vary depending on size and number of trees per acre as well as density of foliage.

Ground Application
Apply using conventional dilute or concentrate ground application sprayers calibrated to deliver sufficient water for thorough coverage (or outside coverage for Asian citrus psyllid, citrus leafminer, or citrus thrips).

Aerial Application
Aerial application is permitted only for control of citrus leafminer. Aerial application to citrus is not approved in California.

<sup>a</sup> The rate of Reaper 0.15 EC per 100 gals. is based on a volume of 1,000 gals./A dilute spray.

<sup>b</sup> For concentrate sprays, adjust the dosage to apply an amount equal to that used in full cover dilute spray.

<sup>c</sup> Ground application: For best results, use 150-300 gals./A of spray mix with a minimum of 3 gals/A of horticultural oil (not a dormant oil) and apply at a ground speed of 1 to 1.5 MPH.

<sup>d</sup> For best results, use a minimum of 500 gals./A of spray mix with a minimum of 0.5% horticultural spray oil (not a dormant oil).

<sup>e</sup> For best results, use 100-200 gals./A of spray mix applied to achieve outside coverage.

**Use Restrictions - Citrus Fruit Crop Group**

PHE: Do not apply within 7 days of harvest.
Application Method:
To control citrus leafminer - Ground or aerial application is permitted; however, do not apply with aircraft to citrus in California. For aerial application use a minimum of 10 gallons of finished spray volume per acre. Under conditions such as high pest populations, dense foliage, or adverse application conditions (such as high temperatures) use a greater volume of water to insure adequate coverage. All other pests - Ground application only. Do not apply with aircraft.
Prohibited Use: To manage resistance do not use in citrus nurseries.
Application Interval: Do not apply Reaper 0.15 EC, or any other abamectin containing product, within 30 days of the last treatment. To manage insect resistance, see the "Resistance Management" heading under the "GENERAL INFORMATION" section of this label.
Maximum Amount per Season: Do not apply more than 40 fl. oz./A (0.047 lb. a.i./A) of Reaper 0.15 EC, or any other abamectin containing product, in any growing season. Do not make more than 3 applications of Reaper 0.15 EC, or any other abamectin containing product, in any growing season.
Grazing: Do not allow livestock to graze in treated groves/orchards.

COTTON: For control of spider mites (Twospotted, Carmine, Pacific and Strawberry) on cotton mix with water and apply at the rates given in the following table:

<table>
<thead>
<tr>
<th>PEST</th>
<th>Fl. oz./A</th>
<th>Instructions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Spider Mites</td>
<td></td>
<td></td>
</tr>
<tr>
<td>(Twospotted, Carmine, Pacific and Strawberry)</td>
<td></td>
<td>Mix with water and begin application when mites are first noticed and repeat if necessary. Do not use less than 4 fl. oz./A. Early season Application: Apply only when cotton is less than 10 inches tall. Use 4 - 6 fl. oz./A; do not use less than 4 fl. oz./A. Mid-Season/lay-by application: Use 8 - 16 fl. oz./A depending on size of plant and density of the foliage.</td>

</table>

Use Restrictions - Strawberries

PHI: Do not apply within 3 days of harvest.

Application Method: Ground application only. Do not apply with aircraft.

Prohibited Use: For resistance management purposes, do not use in strawberry nurseries.

Amount of Water: Do not apply in less than 50 gals. of water/A with conventional ground application equipment. When using electrostatic sprayers do not apply in less than 10 gallons of water/A.

Maximum Amount per Application: Do not apply more than 16 fl oz./A per application.

Application Interval: Wait at least 21 days after the second application before repeating application.

Maximum Amount per Season: Do not apply more than 64 fl oz./A in a growing season.
STORAGE AND DISPOSAL

PROHIBITIONS: Do not contaminate water, food or feed by storage or disposal. Open dumping is prohibited. Do not reuse empty container.

STORAGE: Store in a tightly closed container in a cool, dry place.

PESTICIDE DISPOSAL: Pesticide spray mixture or rinseate that cannot be used or chemically reprocessed should be disposed of in a tankfill approved for pesticides. Improper disposal of excess pesticide spray mixture or rinseate is a violation of Federal law. If these wastes cannot be disposed of by the use according to label instruction, contact your State Pesticide or Environmental Agency or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

CONTAINER DISPOSAL: Nonrefillable container. Do not reuse this container to hold materials other than pesticides or dilute pesticides (rinseate). After emptying and cleaning, it may be allowable to temporarily hold rinseate or other pesticide-related materials in the container. Contact your state regulatory agency to determine allowable practices in your state. Once cleaned, some agricultural plastic pesticide containers can be taken to a container collection site or picked up for recycling. To find the nearest site, contact your chemical dealer or manufacturer, or contact the Agricultural Container Recycling Council (ACRC) at www.acrcy-cle.org. If not recycled, then puncture and dispose of in a sanitary landfill, or incineration, or if allowed by state and local authorities, by burning. If burned, stay out of smoke.

Triple rinse or pressure rinse container (or equivalent) promptly after emptying.

Triple rinses as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container 1/4 full with water and recap.

Storage & Disposal cont'd.

Shake for 10 seconds. Pour rinseate into application equipment or a mix tank or store rinseate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Pressure rinse as follows: Empty the remaining contents into application equipment or a mix tank and continue to drain for 10 seconds after the flow begins to drip. Hold container upside down over application equipment or mix tank or collect rinseate for later use or disposal. Insert pressure rinsing nozzle in the side of the container, and rinse at about 40 PSI for at least 30 seconds. Drain for 10 seconds after the flow begins to drip.

For help with any spill, leak, tire or exposure involving this material, call day or night CHEMTREC - 1-800-424-9300.

CONDITIONS OF SALE AND LIMITATION OF WARRANTY AND LIABILITY

BEFORE BUYING OR USING THIS PRODUCT, read the entire Directions for Use and the following Conditions of Sale and Limitation of Warranty and Liability. By buying or using this product, the buyer or user accepts the following Conditions of Sale and Limitation of Warranty and Liability, which no employee or agent of LOVELAND PRODUCTS, INC. or the seller is authorized to vary in any way.

Follow the Directions for Use of this product carefully. It is impossible to eliminate all risks inherently associated with the use of this product. Crop or other plant injury, ineffectiveness, or other unintended consequences may result from such risks as weather or crop conditions, mixture with other chemicals not specifically identified in this product's label, or use of this product contrary to the label instructions, all of which are beyond the control of LOVELAND PRODUCTS, INC. and the seller. The buyer or user of this product assumes all such inherent risks.
Subject to the foregoing inherent risks, LOVELAND PRODUCTS, INC. warrants that this product conforms to the chemical description on the label and is reasonably fit for the purposes stated in the Directions for Use when the product is used in strict accordance with such Directions for Use under normal conditions of use. EXCEPT AS WARRANTED IN THIS LABEL AND TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, THIS PRODUCT IS SOLD "AS IS," AND LOVELAND PRODUCTS, INC. MAKES NO OTHER WARRANTY, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, OR ELIGIBILITY OF THIS PRODUCT FOR ANY PARTICULAR TRADE USAGE.

IN THE UNLIKELY EVENT THAT BUYER OR USER BELIEVES THAT LOVELAND PRODUCTS, INC. HAS BREACHED A WARRANTY CONTAINED IN THIS LABEL AND TO THE EXTENT REQUIRED BY APPLICABLE LAW, BUYER OR USER MUST SEND WRITTEN NOTICE OF ITS CLAIM TO THE FOLLOWING ADDRESS: LOVELAND PRODUCTS, INC., ATTENTION: LAW DEPARTMENT, P.O. BOX 1286, GREELEY, CO 80632-1286.

TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, THE BUYER'S OR USER'S EXCLUSIVE REMEDY FOR ANY INJURY LOSS, OR DAMAGE RESULTING FROM THE HANDLING OR USE OF THIS PRODUCT, INCLUDING BUT NOT LIMITED TO CLAIMS OF BREACH OF WARRANTY OR CONTRACT, NEGLIGENCE, STRICT LIABILITY, OR OTHER TORTS, SHALL BE LIMITED TO ONE OF THE FOLLOWING, AT THE ELECTION OF LOVELAND PRODUCTS, INC. OR THE SELLER: DIRECT DAMAGES NOT EXCEEDING THE PURCHASE PRICE OF THE PRODUCT OR REPLACEMENT OF THE PRODUCT, TO THE EXTENT CONSISTENT WITH APPLICABLE LAW. LOVELAND PRODUCTS, INC. AND THE SELLER SHALL NOT BE LIABLE TO THE BUYER OR USER OF THIS PRODUCT FOR ANY CONSEQUENTIAL, SPECIAL, OR INDIRECT DAMAGES, OR DAMAGES IN THE NATURE OF A PENALTY.
