MITICIDE/INSECTICIDE

ACTIVE INGREDIENT:
Abamectin (CAS No. 65195-56-4 and No. 65195-55-3) . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . 2.0%*

OTHER INGREDIENTS: . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . 98.0%

TOTAL 100.0%

*1.0 gallon contains 0.15 pound abamectin

KEEP OUT OF REACH OF CHILDREN
WARNING—AVISO
Si usted no entiende la etiqueta, busque a alguien para que se la explique a usted en detalle. (If you do not understand the label, find someone to explain it to you in detail.)

See additional precautionary statements and directions for use in booklet.

EPA REG. NO. 34704-923
EPA EST. NO. 34704-MS-002 (Lot # begins “53”)  EPA EST. NO. 39578-TX-001 (Lot # begins “SET”)
NET CONTENTS 1.0 GAL (3.78 L)

FORMULATED FOR
LOVELAND PRODUCTS, INC.®, P.O. BOX 1286, GREELEY, COLORADO 80632-1286
FIRST AID

If swallowed:
• Call poison control center or doctor immediately for treatment advice.
• Do not give any liquid to the person.
• Do not induce vomiting unless told to do so by the poison control center or doctor.
• Do not give anything by mouth to an unconscious person.

If in eyes:
• Hold eye open and rinse slowly and gently with water for 15 to 20 minutes.
• Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.
• Call a poison control center or doctor for treatment advice.

If on skin or clothing:
• Take off contaminated clothing.
• Rinse skin immediately with plenty of water for 15 to 20 minutes.
• Call a poison control center or doctor for treatment advice.

If inhaled:
• Move person to fresh air.
• If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably by mouth-to-mouth, if possible.
• Call a poison control center or doctor for further treatment advice.

Have the product container or label with you when calling a poison control center or doctor, or going for treatment.

Note to Physician: Early signs of intoxication include dilation of pupils, muscular incoordination, and muscular tremors. Toxicity following accidental ingestion of this product can be minimized by early administration of chemical absorbents (e.g., activated charcoal). If toxicity from exposure has progressed to cause severe vomiting, the extent of resultant fluid and electrolyte imbalance should be gauged. Appropriate supportive parenteral fluid replacement therapy should be given, along with other required supportive measures (such as maintenance of blood pressure levels and proper respiratory functionality) as indicated by clinical signs, symptoms, and measurements. In severe cases, observations should continue for at least several days until clinical condition is stable and normal. Since abamectin is believed to enhance GABA activity in animals, it is probably wise to avoid drugs that enhance GABA activity (barbiturates, benzodiazepines, valproic acid) in patients with potentially toxic abamectin exposure.

FOR A MEDICAL EMERGENCY INVOLVING THIS PRODUCT CALL: 1 866-944-8565.
PRECAUTIONARY STATEMENTS

HAZARDS TO HUMANS AND DOMESTIC ANIMALS

WARNING—AVISO

May be fatal if swallowed. Causes substantial but temporary eye injury. Do not get in eyes or on clothing. Harmful if inhaled or absorbed through the skin. Avoid breathing spray mist. Avoid contact with skin. Prolonged or frequently repeated exposure may cause allergic skin reactions in some individuals.

Personal Protective Equipment (PPE)

Some materials that are chemical-resistant to this product are listed below. If you want more options, follow the instructions for Category B on an EPA chemical-resistance category selection chart.

Applicators and other handlers must wear:

- Coveralls worn over short-sleeved shirt and short pants,
- Chemical-resistant gloves - EPA chemical-resistance category B (e.g., barrier laminate or butyl rubber ≥ 14 mils),
- Chemical-resistant footwear plus socks,
- Protective eyewear,
- Chemical-resistant headgear for overhead exposure,
- Chemical-resistant apron when cleaning equipment, mixing, or loading.

Discard clothing and other absorbent materials that have been drenched or heavily contaminated with this product’s concentrate. Do not reuse them. Follow manufacturer’s instructions for cleaning/maintaining PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry.

USER SAFETY RECOMMENDATIONS

Users should:

- Wash hands before eating, drinking, chewing gum, using tobacco, or using the toilet.
- Remove clothing immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.

ENVIRONMENTAL HAZARDS

This pesticide is toxic to fish and wildlife. Do not apply directly to water, to areas where surface water is present, or to intertidal areas below the mean high water mark. Do not apply when weather conditions favor drift from target areas. Do not contaminate water when disposing of...
equipment wash water or rinsate. This product is highly toxic to bees exposed to direct treatment or residues on blooming crops or weeds. Do not apply this product or allow it to drift to blooming crops or weeds if bees are visiting the treatment area.

Use of this product may pose a risk to threatened and endangered species of fish, amphibians, crustaceans (including freshwater shrimp), and insects. All use of this product in the state of California should comply with the recommendations of the California Endangered Species Project. Before using this product in California, consult with your county agriculture commissioner to determine use limitations that apply to your area. This product may impact surface water quality due to runoff of rain water. This is especially true for poorly draining soils and soils with shallow ground water. This product is classified as having a medium potential for reaching both surface water and aquatic sediment via runoff for several weeks to months after application. A level, well maintained vegetative buffer strip between areas to which this product is applied and surface water features such as ponds, streams, and springs will reduce the potential loading of abamectin from runoff water and sediment. Runoff of this product will be reduced by avoiding applications when rainfall is forecast to occur within 48 hours.

**PHYSICAL OR CHEMICAL HAZARDS**

Combustible. Do not use or store near heat or open flame.

**ATTENTION**

This product contains a chemical known to the state of California to cause birth defects or other reproductive harm.

**DIRECTIONS FOR USE**

**RESTRICTED USE PESTICIDE**

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

**AGRICULTURAL USE REQUIREMENTS**

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.
Agricultural Use Requirements cont’d.
Do not enter or allow worker entry into treated areas during the restricted-entry interval (REI) of 12 hours.
Example: No grape girdling, cane turning, and tying in grapes, do not enter or allow worker entry into treated areas during the restricted-entry interval (REI) of 4 days.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water is:
- Coveralls over short-sleeved shirt and short pants,
- Chemical-resistant gloves - EPA chemical-resistance category B (e.g., barrier laminate or butyl rubber ≥ 14 mils),
- Chemical-resistant footwear plus socks,
- Protective eyewear,
- Chemical-resistant headgear for overhead exposure.

NON-AGRICULTURAL USE REQUIREMENTS
The requirements in this box apply to uses of this product that are not within the scope of the Worker Protection Standard for agricultural pesticides (40 CFR Part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries, or greenhouses.

Do not enter or allow worker entry into treated areas until sprays have dried.

FAILURE TO FOLLOW DIRECTIONS AND PRECAUTIONS ON THIS LABEL MAY RESULT IN CROP INJURY, POOR PEST CONTROL, AND/OR ILLE- 
GAL RESIDUES.

APPLICATION INFORMATION
Reaper® 0.15 EC is an emulsifiable concentrate that will control certain pests on the crops listed on this label when the product is applied according to the Directions for Use. Thorough coverage of foliage is essential for good mite and insect control.

NOTE:
- Phytotoxicity: Reaper 0.15 EC has been tested for phytotoxicity and has a wide margin of safety on a variety of crops. Reaper 0.15 EC has also been shown to be compatible with many commonly used pesticides, crop oils, and nutritional sprays. However, since it is not possible to test a large number of possible mixtures, the user should pre-test any proposed mixtures with Reaper 0.15 EC to ensure the physical compatibility and lack of phytotoxic effects.
- New York State Restrictions: Do not apply Reaper 0.15 EC with aircraft in New York State.
Chemigation
Do not apply this product through any type of irrigation system.

SPRAY DRIFT

Responsibility
Avoiding spray drift at the application site is the responsibility of the applicator. The interaction of many equipment and weather related factors determine the potential for spray drift. The applicator is responsible for considering all of these factors when making application decisions.

NOTE: When states have more stringent regulations, they must be observed.

Spray Drift Precautions for Application with Aircraft or Ground Application Equipment

- Apply Reaper 0.15 EC only when wind velocity favors on target product deposition (approximately 3 to 10 mph).
- Do not apply with ground application equipment within 25 feet of or with aircraft within 150 feet of lakes, reservoirs, rivers, permanent streams, marshes, potholes, natural ponds, estuaries, or commercial fish farm ponds.
- Do not cultivate within 25 feet of the aquatic area to allow growth of a vegetative filter strip.
- Do not allow this product to drift onto non-target areas. Drift may result in illegal residues or injury to nontarget species. Risk of exposure to sensitive areas can be reduced by applying this product when the wind direction is away from the sensitive area.
- Do not apply when the weather conditions may cause drift.
- Avoid application when the temperature is high and/or the humidity is low. These conditions increase the evaporation of spray droplets and the likelihood of drift to aquatic areas.
- Do not apply when wind speed or wind gusts are greater than 15 mph.
- Do not apply when wind speed is below 2 mph because wind direction will vary and there is a high potential for inversion.
- Observe the following precautions when using ground application to spray tree crops or hops in the vicinity of aquatic areas such as lakes, reservoirs, permanent streams, marshes, potholes, natural ponds, estuaries, or commercial fish ponds:
  - Do not apply Reaper 0.15 EC when weather conditions favor drift to aquatic areas.
  - Do not apply within 110 feet upwind of aquatic areas or when wind speed is above 8 mph.
  - Spray last 3 rows windward of aquatic areas using nozzles on one side only, with spray directed away from the aquatic areas.
  - Avoid spray going over tops of trees by adjusting or turning off top nozzles. Shut off nozzles on the side away from the grove/orchard when spraying the outside row. Shut off nozzles when turning at ends of row and passing tree gaps in rows.

Spray Drift Precautions for Aerial Application

Drift Management Requirements
The following drift management requirements must be followed to avoid off-target movement from aerial applications to agricultural field crops.
Outermost Nozzle Distance
The distance of the outermost nozzles on the boom must not exceed 3/4 the length of the wingspan or rotor.

Nozzle Direction
Nozzles must always point backward parallel with the air stream and never be pointed downwards more than 45 degrees.

Maximum Wind Speed
Do not apply when wind speed is greater than 15 mph.

Droplet Size
The most effective way to reduce drift potential is to apply large droplets. The best drift management strategy is to apply the largest droplets that provide sufficient coverage and control. Applying larger droplets reduces drift potential but will not prevent drift if applications are made improperly, or under unfavorable environmental conditions (see Wind, Temperature and Humidity, and Temperature Inversions).

Controlling Droplet Size
Volume - Use high flow rate nozzles to apply the highest practical spray volume. Nozzles with higher rated flows produce larger droplets.
Pressure - Do not exceed the nozzle manufacturer's recommended pressures. For many nozzle types, lower pressure produces larger droplets. When higher flow rates are needed, use higher flow rate nozzles instead of increasing pressure.
Number of Nozzles - Use the minimum number of nozzles that provide uniform coverage.
Nozzle Orientations - Orienting nozzles so that the spray is released parallel to the air stream produces larger droplets than other orientations and is the recommended practice. Significant deflection from horizontal will reduce droplet size and increase drift potential.
Nozzle Type - Use a nozzle type that is designed for the intended application. With most nozzle types, narrower spray angles produce larger droplets. Consider using low-drift nozzles. Solid stream nozzles oriented straight back produce the largest droplets and the lowest drift.

Boom Length
For some use patterns, reducing the effective boom length to less than 3/4 of the wing span or rotor length may further reduce drift without reducing swath width.

Application Height
Applications should not be made at a height greater than 10 feet above the top of the target plants unless a greater height is required for aircraft safety. Making applications at the lowest height that is safe reduces exposure of droplets to evaporation and wind.

Swath Adjustment
When applications are made with a cross wind, the swath will be displaced downwind. Therefore, on the up and downwind edges of the field, the applicator must compensate for this displacement by adjusting the path of the aircraft upwind.

Wind
Drift potential is lowest between wind speeds of 2 to 10 mph. However, many factors, including droplet size and equipment type determine drift potential at any given speed. Application must be avoided below 2 mph due to variable wind direction and high inversion potential.

NOTE: Local terrain can influence wind patterns. Every applicator should be familiar with local wind patterns and how they affect spray drift.
Temperature and Humidity
To compensate for evaporation when applying Reaper 0.15 EC in low relative humidity, set up equipment to produce larger droplets. Evaporation of droplets is most severe when conditions are both hot and dry.

Temperature Inversions
Reaper 0.15 EC must not be applied during a temperature inversion because the potential for drift is high. Temperature inversions restrict vertical air mixing, and this causes small, suspended droplets to remain in a concentrated cloud. This cloud can move in unpredictable directions due to the light variable winds that are common during inversions. Temperature inversions are characterized by temperatures that increase with altitude and are common on nights with limited cloud cover and light to no wind. Inversions begin to form as the sun sets and often continue into the morning. Their presence can be indicated by ground fog; however, if fog is not present, the movement of smoke from a ground source or an aircraft smoke generator can also identify inversions. Smoke that layers and moves laterally in a concentrated cloud (under low wind conditions) indicates an inversion, while smoke that moves upward and rapidly dissipates, indicates good vertical air mixing.

Resistance Management
Reaper 0.15 EC is a Group 6 insecticide (contains the active ingredient abamectin). Because of the inherent risks of pests developing resistance to any product, it is strongly advised that Reaper 0.15 EC be used in a sound resistance management program. Treatment may not be effective against labeled pests if insect or mite-tolerant strains develop. When applying Reaper 0.15 EC to plants that are hosts of labeled pests with multiple generations per crop per year, use resistance management practices. Resistance management practices may include, but are not limited to:
- rotating Reaper 0.15 EC with other products with different modes of action,
- avoiding treatment of successive generations with Reaper 0.15 EC,
- using labeled rates of the specified spray intervals,
- using non-chemical alternatives such as beneficial arthropods,
- rotating susceptible to non-susceptible plants, and
- using various cultural practices.

For additional information regarding the implementation of these or other resistance management practices, consult your local agricultural advisor or company representative.

CROP USE DIRECTIONS
APPLES

For control of European red mite, McDaniel spider mite, Tentiform leafminer, Twospotted spider mite, and White apple leafhopper Reaper 0.15 EC may be applied using conventional dilute or concentrate ground application sprayers calibrated to deliver sufficient water for thorough coverage. Gallons of spray will vary with size and number of trees per acre and density of foliage. In any case, thorough coverage is essential for good spider mite and insect control.
Note:

- For best results, apply in combination with horticultural spray oil (not a dormant oil) as directed. Applications without horticultural spray oil may result in reduced efficacy and/or residual control.
- When used alone or when other products are applied sequentially, Reaper 0.15 EC in combination with horticultural spray oil may injure the fruit of certain apple varieties (e.g., russeting on light-skinned varieties such as Golden Delicious).
- When using Reaper 0.15 EC plus horticultural spray oil, carefully follow the Directions for Use and Precautions on the horticultural spray oil label as well as the precautions in official spray guides or on product labels. For example, applying Reaper 0.15 EC plus horticultural spray oil in less than 14 days before or after applying capitan can result in phytotoxicity and crop loss.

</tr>
</tbody>
</table>

*a* The rate of Reaper 0.15 EC per 100 gallons is based on a volume of 400 gallons per acre dilute spray.

*b* To determine the amount of product per acre for concentrate sprays, first determine the amount that would be required in a full cover dilute spray.

Use the same amount of product per acre in concentrate sprays as would be required for the dilute sprays to the same orchard/grove. This may result in use of less than 10.0 fluid ounces per acre on small trees.

### Use Restrictions:

**PHI:** Do not apply within 28 days of harvest.

**Application Method:** Ground application only. Do not apply with aircraft.

**Amount of Water:** Do not apply in less than 40.0 gallons of water per acre.

**Maximum Amount per Application:** Do not apply more than 20.0 fluid ounces per acre (or 0.023 pound active ingredient per acre) of Reaper 0.15 EC or any other foliarly applied abamectin containing product per application.

**Application Interval:** If a second application is necessary, wait at least 21 days before repeating application.

**Number of Applications:** Do not make more than 2 applications of Reaper 0.15 EC or any other foliarly applied abamectin containing product per growing season.

**Maximum Amount per Season:** Do not apply more than 40.0 fluid ounces per acre (or 0.047 active ingredient per acre) of Reaper 0.15 EC or any other foliarly applied abamectin containing product in a growing season.

**Grazing:** Do not allow livestock to graze in treated orchards.

### AVOCADOS

For control of Avocado thrips

**Note:** Reaper 0.15 EC may be applied using ground application equipment or aircraft. Aerial application is permitted because of its importance to the avocado growing industry. However, aerial application is not the preferred method of application for the best control of Thrips. With aerial application, spray coverage and the resulting control of Thrips is less than with ground application. For this reason, the user accepts all liability for the level and duration of control of Thrips when Reaper 0.15 EC is aerially applied.

Gallons of spray will vary with size and number of trees per acre and density of foliage. In any case, thorough coverage is essential for good mite and insect control.
Avocados cont’d:

**Instructions**

- For best results, apply when immature thrips are first observed but before numbers exceed 5 immature thrips per leaf/fruit.
- Use 10.0 to 15.0 fl oz of product/A for low* to moderate* infestations and 15.0 to 20.0 fl oz of product/A for severe* infestations. Add 1.0 to 4.0% of a horticultural spray oil (not a dormant oil) approved for use on avocados.
- Make a second application, if needed, to maintain control, but wait at least 30 days after the first application to retreat. (See Use Restrictions)

**For Ground Application:** If spray volume is greater than 400 gal/A apply Reaper 0.15 EC at a rate of 2.5 fl oz/100 gal of water plus 1.0 to 4.0% of a horticultural spray oil (not a dormant oil) approved for use on avocados.

**Note:** To prevent crop injury, observe all precautions and restrictions on the oil label. When using oil concentrations above 2.0% treat a small test area before making a large-scale application.

**Use Restrictions:**

- **PHI:** Do not apply within 14 days of harvest.
- **Application Method:** Ground and aerial application permitted.
- **Amount of Water:** Do not apply in less than 100 gallons of water with ground equipment or 50.0 gallons of water with aircraft.
- **Application Interval:** Wait at least 30 days before repeating application.
- **Number of Applications:** Do not make more than 2 applications of Reaper 0.15 EC or any other foliarly applied abamectin containing product per season.
- **Maximum Amount per Season:** Do not apply more than 40.0 fluid ounces per acre (or 0.047 pound active ingredient per acre) of Reaper 0.15 EC or any other foliarly applied abamectin containing product per season.
- **Maximum Amount per Application:** Do not apply more than 20.0 fluid ounces per acre (or 0.023 pound active ingredient per acre) of Reaper 0.15 EC or any other foliarly applied abamectin containing product per application.
- **Grazing:** Do not allow livestock to graze in treated orchards.
CELERIAC (Apium graveolens)
For control of Twospotted spider mite
Reaper 0.15 EC may be applied using conventional dilute or concentrate sprayers. Thorough coverage of the crop canopy is essential for optimum results. Inadequate crop coverage may result in reduced control. Calibrate sprayer to deliver sufficient water for thorough coverage of the foliage.

<table>
<thead>
<tr>

| Twospotted spider mite    | 16.0    | • For best results, use in combination with a non-ionic surfactant.  
|                           |         | • Apply when mites first appear and repeat as necessary to maintain control. (See Use Restrictions) |

Use Restrictions:

PHI: Do not apply within 7 days of harvest.
Application Method: Apply with ground application equipment only.
Amount of Water: Do not apply in less than 20.0 gallons of water per acre.
Application Interval: Wait at least 7 days before repeating application.
Number of Applications: Do not make more than 2 sequential applications of Reaper 0.15 EC or any other foliarly applied abamectin containing product.
Maximum Amount per Season: After transplanting the celeriac, do not apply more than 48.0 fluid ounces per acre (or 0.056 pound active ingredient per acre) of Reaper 0.15 EC or any other foliarly applied abamectin containing product per season.

CITRUS FRUIT CROP GROUP 10
Crops in this group are: Calamondin, Citrus citron, Citrus hybrids (includes Chironja, Tangelo, Tangor), Grapefruit, Kumquat, Lemon, Lime, Mandarin (tangerine), Sour orange, Sweet orange, Pummelo, and Satsuma mandarin.
For control of Asian citrus psyllid, Broad mite, Citrus bud mite, Citrus leafminer, Citrus rust mite, Citrus thrips, and Twospotted spider mite.
Thorough spray coverage is essential for good mite and insect control. Spray gallonage may vary depending on size and number of trees per acre as well as density of foliage.

Ground Application
Apply using conventional dilute or concentrate ground application sprayers calibrated to deliver sufficient water for thorough coverage (or outside coverage for Asian citrus psyllid, Citrus leafminer, or Citrus thrips).

Aerial Application
Aerial application is permitted only for control of Citrus leafminer. Aerial application to citrus is not approved in California.

</tr>
</tbody>
</table>

a The rate of Reaper 0.15 EC per 100 gallons is based on a volume of 1000 gallons per acre dilute spray.

b For concentrate sprays, adjust the dosage to apply an amount per acre equal to that used in full cover dilute spray.

c For best results, use 150 to 300 gallons per acre of spray mix with a minimum of 3.0 gallons per acre of horticultural oil (not a dormant oil) and apply at a ground speed of 1.0 to 1.5 mph.

d For best results, use a minimum of 500 gallons per acre of spray mix with a minimum of 0.5% horticultural spray oil (not a dormant oil).

e For best results, use 100 to 250 gallons per acre of spray mix applied to achieve outside coverage.
Citrus Fruit Crop Group 10 cont’d:

Use Restrictions:

PHI: Do not apply within 7 days of harvest.

Application Method:
To control Citrus leafminer - Ground or aerial application is permitted; however, do not apply with aircraft to citrus in California. For aerial application use a minimum of 10.0 gallons of finished spray volume per acre. Under conditions such as high pest populations, dense foliage, or adverse application conditions (such as high temperatures) use a greater volume of water to insure adequate coverage.

All other pests - Ground application only. Do not apply with aircraft.

Prohibited Use: To manage resistance, do not use in citrus nurseries.

Application Interval: Do not apply Reaper 0.15 EC, or any other abamectin containing product, within 30 days of the last treatment. To manage insect resistance, see the “Resistance Management” heading under the “GENERAL INFORMATION” section of this label.

Maximum Amount per Season: Do not apply more than 40.0 fluid ounces per acre (0.047 pound active ingredient per acre) of Reaper 0.15 EC, or any other abamectin containing product, in any growing season. Do not make more than 3 applications of Reaper 0.15 EC, or any other abamectin containing product, in any growing season.

Grazing: Do not allow livestock to graze in treated groves/orchards.

COTTON

For the control of Spider mites
Mix with water as indicated below. Thorough coverage of the crop is essential for optimum results. Inadequate coverage may result in reduced control. For best coverage and control apply Reaper 0.15 EC with ground application equipment.

</table>

See Instructions
Cotton cont’d.

Use Restrictions:

PHI: Do not apply within 20 days of harvest.

Application Method: Ground or aerial application is permitted.

Minimum Amount of Water: Do not apply in fewer than 5.0 gallons of water per acre. Use sufficient volume to insure thorough coverage.

Maximum Amount per Application: Do not apply more than 16.0 fluid ounces per acre (or 0.019 pound active ingredient per acre) of Reaper 0.15 EC or any other foliarly applied abamectin containing product per application.

Application interval: Wait at least 21 days before repeating application.

Maximum Amount per Season: Do not apply more than 32.0 fluid ounces per acre (or 0.038 pound active ingredient per acre) of Reaper 0.15 EC or any other foliarly applied abamectin containing product per season.

Grazing Restriction: Do not feed or allow livestock to graze treated cotton.

CUCURBITS CROP GROUP 9

Crops in this group are: Chayote, Chinese waxgourd, Citron melon, Cucumbers, Gherkin, Edible gourds (includes Hyotan, Cucuzza, Hechima, Chinese okra), Momordica spp. (includes Balsam apple, Balsam pear, Bittermelon, Chinese cucumber), Muskmelon (hybrids and/or cultivars of Cucumis melo includes true Cantaloupe, Cantaloupe, Casaba, Crenshaw melon, Golden pershaw melon, Honeydew melon, Honey balls, Mango melon, Persian melon, Pineapple melon, Santa Claus melon and Snake melon), Pumpkins, Summer squash (includes Crookneck squash, Scallop squash, Straightneck squash, Vegetable marrow, Zucchini), Winter squash, (includes Butternut squash, Calabaza, Hubbard squash, Acorn squash, Spaghetti squash); Watermelon (includes hybrids and/or varieties of Citrullus lanatus). For control of Spider mites and Leafminers

Mix with water as indicated below. Thorough coverage of the crop canopy is essential for optimum results. Inadequate coverage may result in reduced control.

NOTE: Reaper 0.15 EC may be applied with ground application equipment or aircraft. For best control of mites, apply Reaper 0.15 EC with ground equipment. With aerial application, spray coverage and the resulting control of mites is less than with ground application. For this reason, the user accepts all liability for the level and duration of control of mites when Reaper 0.15 EC is aerially applied.

Leafy Vegetable (Except Brassica Vegetables) Crop Group 4

Use Restrictions:
PHI: Do not apply within 7 days of harvest.

Application Method: Ground or aerial application permitted; however do not apply with aircraft in New York State.

Prohibited Use: For resistance management, do not use on leafy vegetables grown for transplanting.

Amount of Water: Do not apply in less than 20.0 gallons of water per acre with ground application equipment. Do not apply in less than 5.0 gallons of water per acre with aircraft. Under conditions such as high pest populations, dense foliage, or adverse application conditions (such as high temperatures) use a greater volume of water to insure adequate coverage.

Maximum Amount per Application: Do not apply more than 16.0 fluid ounces per acre (or 0.019 pound active ingredient per acre) of Reaper 0.15 EC or any other foliarly applied abamectin containing product per application.

Application Interval: Wait at least 7 days before repeating application.

Number of Applications: Do not make more than 2 sequential applications of Reaper 0.15 EC or any other foliarly applied abamectin containing product.

Maximum Amount per Season: Do not apply more than 48.0 fluid ounces per acre (or 0.056 pound active ingredient per acre) of Reaper 0.15 EC or any other foliarly applied abamectin containing product per growing season.

MINT (Peppermint and Spearmint)
For control of Twospotted spider mite
Mix with water as indicated below. Thorough coverage of the crop canopy is essential for optimum results. Inadequate coverage may result in reduced control.

<table>
<thead>
<tr>
<th>Pest</th>
<th>Fl Oz/A</th>
<th>Instructions</th>
</tr>
</thead>
</table>
| Twospotted spider mite   | 8.0 to 12.0 | * Treat when Mites first appear.  
For optimum control, a nonionic surfactant or organosilicone-based surfactant should be used at the manufacturer’s recommended rate.

Use Restrictions:
PHI: Do not apply within 28 days of harvest.

Application Method: Ground or aerial application permitted; however do not apply with aircraft in New York State.

Amount of Water: Do not apply in less than 20.0 gallons of water per acre with ground application equipment. Do not apply in less than 5.0 gallons of water per acre with aircraft. Under conditions such as high pest populations, dense foliage, or adverse application conditions such as high temperatures, use a greater volume of water to insure adequate coverage.
Mint (Peppermint and Spearmint) cont’d:

**Maximum Amount per Application:** Do not apply more than 12.0 fluid ounces per acre (or 0.014 pound active ingredient per acre) of Reaper 0.15 EC or any other foliarly applied abamectin containing product per application.

**Application Interval:** Wait at least 7 days before repeating application.

**Number of Applications:** Do not make more than 2 sequential applications of Reaper 0.15 EC or any other foliarly applied abamectin containing product and do not apply more than 3 applications of Reaper 0.15 EC or any other foliarly applied abamectin containing product per season.

**Maximum Amount per Season:** Do not apply more than 36.0 fluid ounces per acre (or 0.042 pound active ingredient per acre) of Reaper 0.15 EC or any other abamectin containing product per crop per season.

**Grazing:** Do not allow livestock to graze or feed treated foliage to livestock.

PEARs (Including Oriental Pear Trees)

For control of European red mite, McDaniel spider mite, Pear psylla, Pear rust mite, Twospotted spider mite, and Yellow mite

Reaper 0.15 EC may be applied using conventional dilute or concentrate ground application sprayers calibrated to deliver sufficient water for thorough coverage. Gallons of spray will vary with size and number of trees per acre and density of foliage. In any case, thorough coverage is essential for good spider mite and insect control.

**Note:** For best results, apply in combination with horticultural spray oil (not a dormant oil) as directed. Applications without horticultural spray oil may result in reduced efficacy and/or residual control. When using Reaper 0.15 EC plus horticultural spray oil, carefully follow the Directions for Use and Precautions on the horticultural spray oil label as well as the precautions in official spray guides or on product labels. For example, applying Reaper 0.15 EC plus horticultural spray oil in less than 14 days before or after applying captan can result in phytotoxicity and crop loss.

</tr>
</tbody>
</table>

$^a$ The rate of Reaper 0.15 EC per 100 gallons is based on a volume of 400 gallons per acre dilute spray.
Pears (including Oriental Pear Trees) cont’d.

To determine the amount of product per acre for concentrate sprays, first determine the amount that would be required in a full cover dilute spray. Use the same amount of product per acre in concentrate sprays as would be required for the dilute sprays to the same orchard/grove. This may result in use of less than 10.0 fluid ounces per acre on small trees.

Use Restrictions:
PHI: Do not apply within 28 days of harvest.
Application Method: Ground application only. Do not apply with aircraft.
Amount of Water: Do not apply in less than 40.0 gallons of water per acre.
Maximum Amount per Application: Do not apply more than 20.0 fluid ounces per acre (or 0.023 pound active ingredient per acre) of Reaper 0.15 EC or any other foliarly applied abamectin containing product per application.
Application Interval: If a second application is necessary, wait at least 21 days before repeating application.
Number of Applications: Do not make more than 2 applications of Reaper 0.15 EC or any other foliarly applied abamectin containing product per growing season.
Maximum Amount per Season: Do not apply more than 40.0 fluid ounces per acre (or 0.047 pound active ingredient per acre) of Reaper 0.15 EC or any other foliarly applied abamectin containing product in a growing season.
Grazing: Do not allow livestock to graze in treated orchards.

STONE FRUIT CROP GROUP 12
Crops in this group are: Apricot, Cherry (sweet and tart), Nectarine, Peach, Plum, Plum (Chickasaw, Damson, and Japanese), Plumcot and Prune (fresh)
For control of European spider mite, Pacific spider mite, and Twospotted spider mite
Reaper 0.15 EC may be applied using conventional dilute or concentrate sprayers calibrated to deliver sufficient water for thorough coverage. Gallons of spray will vary with size and number of trees per acre and density of foliage. In any case, thorough coverage is essential for good spider mite control.
Stone Fruit Crop Group 12 cont'd:

<table>
<thead>
<tr>

<td></td>
<td></td>
<td>• A second application may be made, if needed, to maintain control. (See Use Restrictions)</td>
</tr>
<tr>
<td>Twospotted spider mite</td>
<td></td>
<td></td>
<td>• Always apply Reaper 0.15 EC in combination with a non-ionic surfactant that spreads on and/or penetrates the leaf cuticle, or apply with horticultural spray oil (not a dormant oil).</td>
</tr>
</tbody>
</table>

- **NOTE:**
  1. A nonionic surfactant that spreads on and/or penetrates the leaf cuticle can improve insect control. Although Reaper 0.15 EC has been tested in combination with nonionic surfactants for safety to stone fruit, it is impossible to test on all stone fruit varieties under the variety of conditions that may cause crop injury. Therefore, when using Reaper 0.15 EC in combination with a nonionic surfactant, carefully follow the Directions for Use and Precautions on the surfactant label and in official spray guides.
  2. A horticultural oil (not a dormant oil) may improve efficacy and can be used but it may increase the possibility of phytotoxicity to foliage and fruit.
  - Use nonionic surfactants at the manufacturer’s recommended rate.
  - Use a minimum of 0.25% horticultural spray oil (not a dormant oil) in the dilute spray mixture and not less than 1.0 gal of horticultural spray oil/A in the final finished spray.

\* The rate of Reaper 0.15 EC per 100 gallons is based on the volume of 400 gallons per acre dilute spray.
Stone Fruit Crop Group 12 cont’d:

To determine the amount of product per acre for concentrate sprays, first determine the amount that would be required in a full cover dilute spray. Use the same amount of product per acre in concentrate spray as would be required for the dilute sprays to the same orchard/grove. This may result in use of less than 10.0 fluid ounces per acre on small trees.

² The rate of Reaper 0.15 EC per 100 gallons based on a volume of 400 gallons per acre dilute spray.

b To determine the amount of product per acre for concentrate sprays, first determine the amount that would be required in a full cover dilute spray. Use the same amount of product per acre in concentrate sprays that would be required for the dilute sprays to the same orchard/grove. This may result in use of less than 10.0 fluid ounces per acre on small trees.
Tree Nuts Crop Group 14 and Pistachio cont’d:

Use Restrictions:

PHI: Do not apply within 21 days of harvest.

Application Method: Ground application only. Do not apply with aircraft.

Amount of Water: Do not apply in less than 40.0 gallons of water per acre.

Application Interval: If a second application is necessary, wait at least 21 days before repeating application.

Maximum Amount per Application: Do not apply more than 20.0 fluid ounces per acre (or 0.023 pound active ingredient per acre) of Reaper 0.15 EC or any other foliarly applied abamectin containing product per application.

Applications per Season: Do not make more than 2 applications of Reaper 0.15 EC or any other foliarly applied abamectin containing product per growing season.

Maximum Amount per Season: Do not apply more than 40.0 fluid ounces per acre (or 0.047 pound active ingredient per acre) of Reaper 0.15 EC or any other foliarly applied abamectin containing product in a growing season.

Grazing: Do not allow livestock to graze in treated groves/orchards.

TUBEROUS AND CORM VEGETABLES CROP SUBGROUP 1C

Crops in this subgroup are: Arracacha, Arrowroot, Artichoke (Chinese), Artichoke Jerusalem, Canna edible, Cassava (bitter and sweet), Chayote (root), Chufa, Dasheen, Ginger, Leren, Potato, Sweet Potato, Tapioca, Tumeric, Yam bean, and Yam (true)

For control of Colorado potato beetle, Liriomyza leafminers, Potato psyllid, and Spider mites

Mix with water as indicated below. Thorough coverage of the crop canopy is essential for optimum results. Inadequate coverage may result in reduced control.

Note: Reaper 0.15 EC may be applied using ground application equipment or aircraft. For best control of Mites, apply Reaper 0.15 EC with ground application equipment. With aerial application, spray coverage and the resulting control of Mites is less than with ground application. For this reason, the user accepts all liability for the level and duration of control of Mites when Reaper 0.15 EC is aerially applied.

</table>

#### Use Restrictions:

- **PHI:** Do not apply within 14 days of harvest.
- **Application Method:** Ground or aerial application permitted; however do not apply with aircraft in New York State.
- **Amount of Water:** Do not apply in less than 20.0 gallons of water per acre with ground application equipment. Do not apply in less than 5.0 gallons of water per acre with aircraft. Under conditions such as high pest populations, dense foliage, or adverse application conditions (such as high temperatures) use a greater volume of water to insure adequate coverage.
- **Maximum Amount per Application:** Do not apply more than 16.0 fluid ounces per acre (or 0.019 pound active ingredient per acre) per application.
- **Application Interval:** Wait at least 7 days before repeating application.
- **Maximum Amount per Crop:** Do not apply more than 32.0 fluid ounces per acre (0.038 pound active ingredient per acre) of Reaper 0.15 EC or any other foliarly applied abamectin containing product per crop for Spider mite or Colorado potato beetle control. Do not apply more than 48.0 fluid ounces per acre (or 0.056 pound active ingredient per acre) of Reaper 0.15 EC or any other foliarly applied abamectin containing product per crop for Leafminer control.
- **Grazing:** Do not allow livestock to graze or feed treated foliage to livestock.
**ORNAMENTALS**

Shadehouse, Greenhouse, Field-grown ornamentals, Foliage plants, Christmas trees, and Other woody ornamentals

</tbody>
</table>

**General Information:** Residual control of pests may be enhanced with the addition of a horticultural spray oil at 0.5 to 1.0% of the spray volume on field-grown Woody ornamentals, landscape plants, and Christmas trees. Repeat application as necessary, but no sooner than 7 days to maintain control. Some plants are sensitive to oils and so without prior experience, the user should spray a small number of plants and observe for 2 weeks before spraying the remaining plants. Excessive cold or warm temperatures may increase the chance of plant damage following application with oils. Carefully read and follow directions on the oil label and do not exceed maximum rates listed on either label.

**General Information Per Application:** Do not apply less than 8.0 fluid ounces or more than 16.0 fluid ounces per acre. Use sufficient water to obtain uniform plant coverage. Refer to the Resistance Management section and the Use Restrictions section for additional information.

1Apply, for example, in 200 to 400 gallons of water per acre. In volumes of water below 200 gallons, use a minimum of 8.0 fluid ounces per acre. If more than 400 gallons of water per acre are required for good plant coverage, apply a maximum rate of 16.0 fluid ounces per acre.

For example, if 650 gallons of water are required, use 2.5 fluid ounces per 100 gallons.
Ornamentals cont’d:

*Apply, for example, in 100 to 200 gallons of water per acre. In volumes of water below 100 gallons, use a minimum of 8.0 fluid ounces per acre. If more than 200 gallons of water per acre are required for good plant coverage, apply a maximum rate of 16.0 fluid ounces per acre. For example, if 400 gallons of water are required, use 4.0 fluid ounces per 100 gallons.

Use Restrictions on Ornamentals:

- Do not use Reaper 0.15 EC for suppression of Aphids, Whiteflies, and Thrips on Roses, Chrysanthemums, and Gerbera. These ornamentals are primary hosts of Mites and Liriomyza leafminers for which Reaper 0.15 EC applications should be targeted. Additional applications of Reaper 0.15 EC to suppress Aphids, Thrips, and Whiteflies on these plants will increase the selection pressure on Mites and Liriomyza leafminers which may result in greater tolerance to Reaper 0.15 EC among these pests.
- Do not apply Reaper 0.15 EC through any type of irrigation system.
- Do not use in Citrus nurseries.
- Do not use Reaper 0.15 EC on a wide range of Ornamental plants. However, since all combinations or sequences of pesticide sprays including surfactants and adjuvants have not been tested, it is recommended that a small area be sprayed first to make certain that no phytotoxicity occurs. Phytotoxicity has been observed following the use of Reaper 0.15 EC on certain species of ferns (e.g., Adiantum spp.) and Shasta daisy (L. eucanthemum spp.). It is therefore recommended that Reaper 0.15 EC not be used on ferns or Shasta daisy.

STORAGE AND DISPOSAL

Do not contaminate water, food or feed by storage or disposal. Open dumping is prohibited. Do not reuse empty container.

PESTICIDE STORAGE: Store in a tightly closed container in a cool, dry place.

PESTICIDE DISPOSAL: Pesticide spray mixture or rinsate that cannot be used should be disposed of in a landfill approved for pesticides. Improper disposal of excess pesticide spray mixture or rinsate is a violation of Federal law. If these wastes cannot be disposed of by the use according to label instruction, contact your State Pesticide or Environmental Agency or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

CONTAINER DISPOSAL: Nonrefillable container. Do not reuse or refill this container. It may be allowable to temporarily hold rinsate or other pesticide-related materials in the container. Contact your state regulatory agency to determine allowable practices in your state. Once cleaned, some agricultural plastic pesticide containers can be taken to a container collection site or picked up for recycling. To find the nearest site, contact your chemical dealer or manufacturer, or contact The Agricultural Container Recycling Council (ACRC) at www.acrecycle.org. If not recycled, then puncture and dispose of in a sanitary landfill, or incineration, or if allowed by state and local authorities, by burning. If burned, stay out of smoke.

Triple rinse or pressure rinse container (or equivalent) promptly after emptying.

Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins.
Before buying or using this product, read the entire Directions for Use and the following Conditions of Sale and Limitation of Warranty and Liability. By buying or using this product, the buyer or user accepts the following Conditions of Sale and Limitation of Warranty and Liability, which no employee or agent of Loveland Products, Inc. or the seller is authorized to vary in any way. Follow the Directions for Use of this product carefully. It is impossible to eliminate all risks inherently associated with the use of this product. Crop or other plant injury, ineffectiveness, or other unintended consequences may result from such risks as weather or crop conditions, mixture with other chemicals not specifically identified in this product's label, or use of this product contrary to the label instructions, all of which are beyond the control of Loveland Products, Inc. and the seller. The buyer or user of this product assumes all such inherent risks. Subject to the foregoing inherent risks, Loveland Products, Inc. warrants that this product conforms to the chemical description on the label and is reasonably fit for the purposes stated in the Directions for Use when the product is used in strict accordance with such Directions for Use under normal conditions of use. EXCEPT AS WARRANTED IN THIS LABEL AND TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, THIS PRODUCT IS SOLD “AS IS,” AND LOVELAND PRODUCTS, INC.
