Insecticide for foliar and systemic insect control in turfgrass (including sod farms), landscape ornamentals, fruit and nut trees and interior plantings.

**ACTIVE INGREDIENT:**
- methoxychlor 1.5 (6-Chloro-3-pyridyl methyl) acetate 2% microcapsules

**OTHER INGREDIENTS:**
- 75.0%
- 25.0%
- TOTAL: 100.0%

Keep water soluble powder in its container and store in a cool, dry place but not below freezing (32°F).

Do not remove packaging from container except for immediate use.

**KEEP OUT OF REACH OF CHILDREN**

**CAUTION**

**PRECAUCIÓN AL USUARIO:** Si usadas no pudieron ser acondicionadas para uso personalizado, no use este producto hasta que se ajuste a las especificaciones de su ubicación.

**TO THE USER:** If you cannot read or understand English, do not use this product until the label has been fully explained to you.

**FIRST AID:**

**IF SWALLOWED:**
- Call a poison control center or doctor immediately for treatment advice
- Have someone call a poison control center or doctor immediately
- Do not give anything by mouth to an unconscious person

**IF ON SKIN:**
- Take off contaminated clothing
- Wash affected area with plenty of water for 15 to 20 minutes
- Call a poison control center for treatment advice

**IF IN EYES:**
- Hold eye open and rinse slowly and gently with water for 15 to 20 minutes
- Remove contact lenses, if present, after first 5 minutes
- Call a poison control center for treatment advice
- Call a poison control center for treatment advice

In case of emergency, call CHEMREC toll-free at 1-800-227-1140. Have a product container or label with you when calling a poison control center.

Note to Physician: No specific antidote is available. Treat the patient symptomatically.

See inside booklet for additional precautionary statements.
PRECAUTIONARY STATEMENTS
HAZARDS TO HUMANS AND DOMESTIC ANIMALS

CAUTION: Harmful if swallowed or absorbed. Avoid breathing dust or vapors. Wash thoroughly with soap and water after handling. Remove contaminated clothing and wash before reuse. Keep children and pets out of treated area until spray is dry.

Applicators and Other Handlers Must Wear:
1. Long-sleeved shirt and long pants
2. Chemical-resistant gloves made of any waterproof material such as barrier laminate, butyl rubber, nitrile rubber, neoprene rubber, natural rubber, polyethylene, polyvinylchloride (PVC) or viton
3. Shoes plus socks

Follow manufacturer's instructions for cleaning/maintaining personal protective equipment, PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry.

ENGINEERING CONTROLS STATEMENTS

When handlers use closed systems, enclosed cabinets, or equipment in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides (40 CFR 170.240(b)(6-9)), the handler PPE requirements may be reduced or modified as specified in the WPS.

ENVIRONMENTAL HAZARDS

This product is highly toxic to aquatic invertebrates. Do not apply directly to water, to or around areas where surface water is present or to tidal areas below the mean high water mark. Do not contaminate water when disposing of equipment washwater.

This product is highly toxic to bees exposed to direct treatment or residues on blooming crops or weeds. Do not apply this product or allow it to drift to blooming crops or weeds if bees are visiting the treated area. This chemical demonstrates the properties and characteristics associated with chemicals detected in groundwater. The use of this chemical in areas soils are permeable, particularly where the water table is shallow, may result in groundwater contamination.

Do not formulate this product into other end-use products.

STORAGE AND DISPOSAL

Do not contaminate water, food or feed by storage or disposal.

PESTICIDE STORAGE: Store in a cool, dry place and in such a manner as to prevent cross contamination with other pesticides, fertilizers, food, and feed. Store in original container and out of the reach of children, preferably in a locked storage area.

Handle and open container in a manner as to prevent spillage. If container is leaked or material spilled for any reason or cause, carefully sweep material into a pile. Refer to Precautionary Statements on label for hazards associated with the handling of this material. Do not work through spilled material. Dispose of pesticides as directed below. In spills or leak incidents, keep unauthorized people away. You may contact Chemtron at 800-431-6248, or OSHA/RCRA/contamination procedures or any other assistance that may be necessary.

PESTICIDE DISPOSAL: Wastes resulting from the use of this product may be disposed of on site or at an approved waste disposal facility.

CONTAINER DISPOSAL: Triple rinse (or equivalent). Then either for recycling or reconditioning, or puncture and dispose of in a sanitary landfill or by incineration, or, if allowed by State and local authorities, by burning. If burned, stay out of smoke.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted-entry interval (REI) of 12 hours.

Exception: If the product is applied by drenching, the Worker Protection Standard, under certain circumstances, allows workers to enter the treated area if there will be no contact with anything that has been treated.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water, is:

1. Coveralls
2. Chemical-resistant gloves made of any waterproof material such as barrier laminate, butyl rubber, nitrile rubber, neoprene rubber, natural rubber, polyethylene, polyvinylchloride (PVC) or viton
3. Shoes plus socks

The requirements in this box (40 CFR part 170). The WPS keeps children and pets off treated areas until spray is dry.

NON-AGRICULTURAL USE REQUIREMENTS

The requirements in this box apply to uses of this product that are NOT within the scope of the Worker Protection Standard for agricultural pesticides (40 CFR part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries, or greenhouses. Keep children and pets off treated area until dry.

APPLICATION TO TURFGRASS

ENFORCE™ 75WSP will control the following soil inhabiting pests found in turfgrass

<table>
<thead>
<tr>
<th>PEST</th>
<th>SCIENTIFIC NAME</th>
</tr>
</thead>
<tbody>
<tr>
<td>Japanese beetle</td>
<td>Popillia japonica</td>
</tr>
<tr>
<td>European chafer</td>
<td>Rhizotria majors</td>

</tr>
<tr>
<td>Mole crickets</td>
<td>Scapteriscus spp.</td>
</tr>
</tbody>
</table>

ENFORCE™ 75WSP will suppress cutworms and chinch bugs.

ENFORCE™ 75WSP can be applied on turfgrass in the following sites:

- Home lawns
- Business and office complexes
- Multi-family residential complexes
- Cemeteries
- Athletic fields
- Golf courses
- Parks
- Sidewalks
- Playgrounds
- Shopping complexes
- Sprinkler systems

ENFORCE™ 75WSP has adequate residual activity that applications can be made preceding the egg laying activity of the target pests. Best control is achieved when applications are made prior to egg hatch of the pests. Sufficient irrigation or rainfall is required to move the active ingredient through the thatch.

Avoid application when infested turfgrass areas are waterlogged or soil beneath turf is saturated with water. These conditions prevent thorough and consistent distribution. Best results are achieved when rainfall or irrigation after application will penetrate vertically to the soil column carrying the active ingredient into the zone where insects are normally located.

Do not exceed a total of 8.6 ounces application (0.4 lb. of active ingredient) per acre per year.

APPLICATION EQUIPMENT FOR USE ON TURFGRASS

ENFORCE™ 75WSP should be diluted with enough water to provide adequate volume to promote thorough distribution into the plant zone. Use only accurately calibrated equipment for application to turfgrass. Apply using a uniform, coarse droplet spray using a low pressure setting to eliminate off target drift. Calibration should be performed on a regular basis to ensure that equipment is distributing product properly.

APPLICATION TO ORNAMENTALS

ENFORCE™ 75WSP can be applied to ornamental plants in commercial and residential landscapes and interior plantscapes. ENFORCE™ 75WSP is a systemic insecticide that is transported within the plant system from the roots to the upper foliage. ENFORCE™ 75WSP must be applied into a growing area of the plant that allows absorption of the active ingredient. Adding soluble nitrogen to the spray solution when appropriate can promote the uptake of the active ingredient.

Application can be made by foliar application or soil applications; including soil injection, drenches, and broadcast sprays. Foliar applications should be applied no less than 7 days after application to the ornamental plant.

For outdoor ornamentals, broadcast applications cannot exceed a total of 8.6 ounces (0.4 lb. of active ingredient) per acre per year.

ANT MANAGEMENT PROGRAMS

Using ENFORCE™ 75WSP to control aphids, scale insects, mealybugs and other sucking pests on ornamentals will reduce ant populations because it removes honeydew as a food source. To enhance control of ants, supplement with residual sprays, bait placements or other ant control tactics.

NOTE: Not for use in commercial greenhouses, nurseries, or on grasses grown for seed, or on commercial fruit and nut trees.

APPLICATION EQUIPMENT FOR FOLIAR APPLICATIONS

ENFORCE™ 75WSP mixes readily with water and may be used in many types of application equipment. Add a commercial spreader/sticker to promote coverage on hard to wet foliage such as holly, pine, or haw.

ENFORCE™ 75WSP is compatible with most commonly used fungicides, miticides, liquid fertilizers, and other insecticides. If applicator has no prior experience with a particular tank mix, physical compatibility should be checked by making a small color test using correct proportions of products to be tank mixed.

Do not apply through any irrigation system.

Other uses include:

- Do not graze treated vegetation
- Avoid runoff or puddles
- Keep children and pets out
- Avoid application of this product when winds exceed 20 mph
- Do not apply more than 8.6 lb. of active ingredient/acre
- Do not treat areas near where bees or other beneficial insect are nesting
- Follow state and local regulations

Use Site: Turfgrass

To control larvæ of:

- European Crab Spider
- Annual bluegrass weevil

For chinch bugs (in the family of Chinchidae) and Japanese beetles:

- Apply 1.6 ounces (1 pt) of ENFORCE™ 75WSP per 1,000 sq. ft.
- Follow the label instructions

For use with Ensete, apply 10.4 ounces (1 gallon) per 1,000 sq. ft.

Use Site: Trees

To control:

- Aldelids
- Asian longhorned beetle
- Honeybee/Plant leafhopper
- Fungous leafminer
- Fungous flower gall
- Hirsutus Japanese beetles

Apply 1.6 ounces (1 pt) per 1,000 sq. ft. as needed. For trees, apply 3.2 ounces (1 gallon) per 1,000 sq. ft. as needed. For use in and around inc.

To control:

- Aldelids
- Asian longhorned beetle
- Hirsutus Japanese beetles

Area

Use Site: Trees, SI

For TREES, apply 1.6 c

Area
RESTRICTIONS

- Do not graze treated areas or use clippings from treated areas for feed or forage.
- Avoid runoff or puddling of irrigation water following application.
- Keep children and pets off treated area until dry.
- Avoid application of ENFORCE™ 75WSP to areas which are waterlogged or saturated, which will not allow penetration into the root zone of the plant.
- Do not apply more than 8.6 ounces (0.4 lb. of active ingredient) per acre per year.
- Treated areas may be replanted with any crop specified on an imidacloprid label, or with any crop for which a tolerance exists for the active ingredient.
- For crops not listed on an imidacloprid label, or for crops for which no tolerances for the active ingredient have been established, a 12-month plant-back interval should be observed.

Use Site: TURF GRASSES

To control Larvae of:
- European Crabgrass Fly
- Annual bluegrass weevil
- Green June beetle
- Athletic garden beetle
- Japanese beetle

Apply 1.6 ounces (1 packet) per 8,200 to 11,000 sq. ft. Make application prior to egg hatch of grubs, billbugs, annual bluegrass weevil, and European Crabgrass Fly to minimize control.

For chinch bugs (suppression) and mole crickets apply 1.6 ounces (1 packet) per 8,200 sq. ft. For suppression of chinch bugs, make application before the hatching of the first instar nymphs.

For control of mole crickets make application before or during the peak egg hatch period. If adults or large nymphs are actively tunneling, ENFORCE™ 75WSP application should be combined with a curative insecticide. Follow label instructions for other insectsides when tank-mixing.

Consult your local turf, state Agricultural Experiment Station, or State Extension Service Specialists for more specific information regarding timing of application.

Notes and Restrictions for Turf Grass:
- Irrigation or rainfall should occur within 24 hours after application to move the active ingredient through the thatch.
- Do not apply more than 8.6 ounces (0.4 lb. of active ingredient) per acre per year.
- Avoid moving turf or lawn area, until after adequate irrigation or rainfall has occurred.

Use Site: TREES, SHRUBS, EVERGREENS, FLOWERS, FOLIAGE PLANTS, GROUNDCOVERS AND INTERIOR PLANTSCAPES

(Only in and around industrial and Commercial Buildings and Residential Areas)

To control:
- Aphids
- Boxes (including boxwood beetles)
- Black vine weevil
- Emerald Ash Borer
- European garden beetle
- Japanese beetles
- Lace bugs
- Leaf beetles (including elm and viburnum leaf beetles)
- Leaffoilers (including glassy-winged sharpshooter)
- Leaffoilers (including Boxwood leaffoiler)
- Flea beetles
- Japanese beetles
- Spittlebugs
- Thrips (including flower and pine thrips)
- Whiteflies

Sprays, Folliar applications offered locally.

This delay can take 60 days or longer per acre per year.

Sprays or dusts will reduce stand populations because it is or other ant control tactics. It is not trees.

For TREES, apply 1.6 ounces (1 packet) of ENFORCE™ 75WSP per 24 to 48 inches of cumulative trunk diameter.
Application Technique:

**Soil Injection:**
- **GRID SYSTEM:** Make applications in a grid pattern on 2.5 foot centers within the drip line of the tree.
- **CIRCLE SYSTEM:** Make applications in holes evenly spaced approximately 2-3 feet apart in a circle within the drip line of the tree. Larger trees may require additional application circles.
- **BASAL SYSTEM:** Make applications into holes evenly spaced around the base of the tree trunk no more than 5 to 12 inches from the base.

**Soil Drench:**
- Apply no less than 10 gallons of water per 1,000 square feet as a drench around the base of the tree, directed to the root zone. Any plastic or other barrier that may prevent drench solution from reaching the root zone must be removed.

**Notes and Restrictions for Trees:**
- Use sufficient water to be able to inject an equal amount of solution in each hole.
- Use low pressure and sufficient solution for thorough distribution in the treatment zone.
- Maintain soil moisture for 7 to 10 days.
- Do not use less than 4 holes per tree.
- No Soil Injection Applications Allowed In Nassau or Suffolk Counties of New York.
- Application to trees already heavily infested with borers listed may not prevent the eventual loss of the trees.

For SHRUBS apply 1.6 ounces (1 packet) of ENFORCE™ 75WSP per 24 to 48 feet of shrub height.

**Application Techniques:**

**Soil Injections:**
- Apply to individual plants using dosage indicated.

**Soil Drench:**
- Uniformly apply the dosage in no less than 10 gallons of water per 1,000 square feet as a drench around the base of the tree, directed to the root zone. Remove plastic or any other barrier that will stop solution from reaching the root zone.

**Notes and Restrictions for Shrubs:**
- Use sufficient water to be able to inject an equal amount of solution in each hole.
- Maintain soil moisture for 7 to 10 days.
- Do not use less than 4 holes per shrub.
- No Soil Injection Applications Allowed In Nassau or Suffolk Counties of New York.

For FLOWERS and GROUNDCOVERS apply 1.6 ounces (1 packet) of ENFORCE™ 75WSP per 8,250 to 11,000 sq. ft.

Apply as a broadcast treatment and incorporate into the soil before planting or apply after plants are established. If application is made to established plants, best control is achieved by irrigating application.

**Use Site: POME FRUITS** (only in and around residential area)
- Includes: Apple, Crabapple, Loquat, Mayhaw, Pear, Pear (oriental), Guince

To control:
- Aphisida (except Wooly apple aphid)
- Leafhoppers (including glassy-winged sharpshooter)
- Beans (including glassy-winged sharpshooter)
- San Jose Scale

Apply 1.6 ounces (1 packet) per 300 gallons of water OR
2.1 ounces per acre³.

**Notes and Restrictions for Residential Pome Fruits:**
- Apply specified dosage as foliar spray as needed after petal fall is complete.
- For control of any apple aphid, apply prior to blooming caused by the pest.
- For first generation leafminer control, make first application as soon as petal fall is complete. Greatest leafminer control will result from the earliest possible application. For second and succeeding generations of leafminer, optimal control is obtained from applications made early in the adult flight against egg and early instar larvae. A second application may be required 10 days later if savannah pressure continues or if generations are over-lapping a single application may result in suppression only. ENFORCE™ 75WSP will not control late stage larvae.
- For San Jose Scale, time applications to the crawler stage. Treat each generation.
- For late season (unharvested) control of leafminer species, apply ENFORCE™ 75WSP while most leafhoppers are in the nymphal stage.
- For optimal control of mites, spray good coverage of the trunk and scaffolding limbs or other resting sites of the mites.
- Do not apply more than 2.1 ounces per acre in a single application. Do not make more than 5 applications.
- Allow 10 or more days between applications.
- Allow at least 7 days between last application and harvest.
- Not for use in California for control on pears.

¹ The amount of ENFORCE™ 75WSP required per acre depends on tree size and/or volume of foliage. The rate per acre is based on a standard of 400 gallons of dixie spray solution per acre for large trees with full foliage.
PECAN (Only in and around residential area
(Use on pecans not permitted in California unless directed by specific supplemental labeling)

To control

1. Yellow pecan aphid
2. Black margined aphid
3. Pecan thrip
4. Pecan aphids
5. Pecan leaf blight

1 oz. Any plastic or other

2.1 ounces per acre

A. Make foliar applications at recommended rate as soon after first foliar spray as practical. Use of an organo-silicone based spray adjuvant at recommended rate can increase thorough coverage of foliage.

Notes and Restrictions for residential Pecan Trees:

- Do not apply more than a total of 60 ounces of ENFORCE™ 75WSP per acre per year.
- Do not apply more than 3 applications.
- Allow 10 or more days between applications.

The amount of ENFORCE™ 75WSP required per acre depends on tree size and/or volume of foliage. The rate per acre is based on a standard of 400 gallons of dilution spray solution per acre for large trees with full foliage.

GRAPECR (For use only in and around industrial and commercial buildings and residential areas)

To control Leafhoppers (including glassy-winged sharpshooter) and Mealybugs apply 1.6 ounces (1 packet) per 300 gallons of water per acre.

1.0 ounce per acre as a foliar spray using 200 gallons of water per acre.

Restrictions and Restrictions for residential Grapes:

- Do not apply more than a total of 2.0 ounces of ENFORCE™ 75WSP per acre per year.
- Allow at least 14 days between applications.
- Applications may be applied up to weekly and including day of harvest.

CONDITIONS OF SALE AND WARRANTY

Advan LLC warrants that the material contained herein conforms to the description on the container and is reasonably fit for the purposes stated on the label when used in accordance with the Directions For Use under normal conditions of use.
