</table>

HOTLINE NUMBER
Have the product container or label with you when calling a poison control center or doctor, or going for treatment.
Contact 1-888-478-0798 for emergency medical treatment information.

PRECAUTIONARY STATEMENTS
HAZARDS TO HUMANS AND DOMESTIC ANIMALS

WARNING/AVISO
May be fatal if inhaled. Do not breathe dust or spray mist. For handling activities, wear a NIOSH approved particulate respirator with any N, R, or P filter (NIOSH approval number prefix TC-84A); or a NIOSH approved powered air purifying respirator with an HE filter (NIOSH approval number prefix TC-21C). Wear long-sleeved shirt and long pants, socks and shoes and waterproof gloves. Harmful if swallowed or absorbed through skin. Avoid contact with skin. Remove contaminated clothing and wash before reuse. Causes moderate eye irritation. Do not get in eyes or on clothing. Wear goggles, face shield, or safety glasses. Wash hands thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco or using the toilet.

PERSONAL PROTECTIVE EQUIPMENT (PPE)
Applicators and other handlers must wear:
• Long-sleeved shirt and long pants
• Shoes plus socks
• Waterproof gloves
• Protective eye wear
• For handling activities, wear a NIOSH approved particulate respirator with any N, R, or P filter (NIOSH approval number prefix TC-84A); or a NIOSH approved powered air purifying respirator with an HE filter (NIOSH approval number prefix TC-21C).
• Chemical resistant headgear for overhead exposure.
Discard clothing and other absorbent materials that have been drenched or heavily contaminated with this product’s concentrate. Do not re-use them. Follow the manufacturer’s instructions for cleaning and maintaining PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry.

NET CONTENTS ___ POUNDS
Engineering Controls Statement: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170.240(d)(4-6)], the handler PPE requirements may be reduced or modified as specified in the WPS.

### USER SAFETY RECOMMENDATIONS

Users should:
- Wash hands before eating, drinking, chewing gum, using tobacco, using the toilet.
- Remove clothing immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
- Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

### ENVIRONMENTAL HAZARDS

This pesticide is toxic to fish and aquatic invertebrates. Do not apply directly to water or to areas where surface water is present or to intertidal areas below the mean high-water mark. Keep out of lakes, ponds, or streams. Do not contaminate water by cleaning of equipment or disposal of equipment washwaters. Do not apply when weather conditions favor drift from target area. Drift or runoff from treated areas may be hazardous to fish in adjacent sites. This product is highly toxic to bees. Do not apply this product or allow it to drift to blooming crops or weeds while bees are foraging the treatment area. Application early in the morning or at dusk is suggested.

### ENDANGRED SPECIES CONCERNS

The use of any pesticide in a manner that may kill or otherwise harm an endangered species or adversely modify their habitat is a violation of federal law.

### DIRECTIONS FOR USE

It is a violation of federal law to use this product in a manner inconsistent with its labeling. Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your state or tribe, consult the agency responsible for pesticide regulation.

All applicable directions, restrictions, precautions and Notice of Conditions of Sale and Warranty and Liability Limitations are to be followed.

### AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 12 hours. PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water, is:
- Coveralls
- Waterproof gloves
- Shoes plus socks
- Protective eye wear
- For handling activities, wear a NIOSH approved particulate respirator with any N, R, or P filter (NIOSH approval number prefix TC-84A); or a NIOSH approved powered air purifying respirator with an HE filter (NIOSH approval number prefix TC-21C).
- Chemical resistant headgear for overhead exposure.

### USE INFORMATION

This package contains **NEXTER Miticide/Insecticide**, a 75% wettable powder, in water-soluble bags. **NEXTER** is a selective contact Miticide/Insecticide that controls pests. **NEXTER** provides knockdown and residual control. A good performance evaluation can be made 4-7 days after treatment. For optimum results, **NEXTER** should be applied as pest populations build and prior to reaching economic thresholds.

#### Mite Resistance Management

Naturally occurring strains of mites and insects listed on this label may not be effectively controlled due to reduced sensitivity. If insensitive strains are present in a field, use a product with a different mode of action to ensure control. Alternate **NEXTER** with other miticides as part of a mite management program to minimize resistance. Repeated use of the same miticide has been documented to result in the buildup of resistant strains of mites. To limit the potential for **NEXTER** insensitivity development, do not make more applications than those specified in the crop section of the label. Consult with your local or state extension personnel for advice on miticide use and selection.

#### Cleaning Spray Equipment

Clean application equipment thoroughly by using a strong detergent or commercial sprayer cleaner according to the manufacturer’s directions and by triple rinsing the equipment before and after applying this product.

#### APPLICATION INSTRUCTIONS

**NEXTER** may be applied by ground equipment using either diluted or concentrated sprays. Apply listed rates of **NEXTER** as instructed by Section VII. Crop-Specific Information. Spray the last 3 rows windward of surface water using nozzles on only one side with the spray directed away from surface water. Spraying over the tops of trees can be prevented by adjusting or turning off the top nozzles. Shut the nozzles on the side away from the grove off when spraying the outside row. Shut the nozzles off when turning at the ends of the rows and when passing tree/vine gaps in rows.

**Coverage**

Apply **NEXTER** in sufficient water to ensure thorough coverage of foliage and fruit. Thorough coverage is required for optimum control. Spraying alternate rows may reduce **NEXTER** performance. **NEXTER** must be applied to each row for optimum control. To achieve thorough coverage, use proper spray pressure, nozzles, nozzle spacing, volume per acre, and tractor speed. Consult spray nozzle and accessory guide for information pertaining to proper equipment calibration.
Ground Application (Broadcast)
Water Volume: Use 100-400 gallons of spray solution per broadcast acre for optimal performance. In Florida, a minimum of 20 gallons of water per acre in citrus may be used.

ADDITIVES
In general, no additives or adjuvants are necessary for effective use of NEXTER. However, the use of additives may be considered for certain conditions such as obtaining better spray distribution, adhesion or penetration of product onto leaf or plant surfaces. Consult a Canyon representative or local agricultural authorities for more information concerning additives.

TANK MIXING INFORMATION
The phytotoxic potential of NEXTER has been assessed on a wide variety of plants with no phytotoxicity observed. However, all varieties and cultivars have not been tested with possible tank mix combinations. Local conditions can also influence crop tolerance and may not match the information under which testing had been conducted. Therefore, before using NEXTER test the product on a sample of the crop to be treated to ensure that a phytotoxic response will not occur as a result of applications.

Compatibility Test for Mix Components
Before mixing components, always perform a compatibility jar test.
For 20 gallons per acre spray volume, use 3.3 cups (800 ml) of water. For other spray volumes, adjust rates accordingly. Only use water from the intended source at the source temperature.
Add components in the sequence indicated in the Mixing Order (see below) using 2 teaspoons for each pound or 1 teaspoon for each pint of listed label rate per acre.
Always cap the jar and invert 10 cycles between component additions.
When the components have all been added to the jar, let the solution stand for 15 minutes. Evaluate the solution for uniformity and stability.
The spray solution should not have free oil on the surface, nor fine particles that precipitate to the bottom, nor thick (clarified) texture. If the spray solution is not compatible, repeat the compatibility test with the addition of a suitable compatibility agent. If the solution is still incompatible, do not mix the ingredients in the same tank.

Mixing Order
1. Water
2. Agitation
3. Products in PVA bags: Place any product contained in water-soluble PVA bags such as NEXTER miticide/insecticide into the mixing tank. Wait until all water-soluble PVA bags have fully dissolved and the product is evenly mixed in the spray tank before continuing.
4. Water-dispersible products: (such as dry flowables, wettable powders, suspension concentrates, or suspo-emulsions).
5. Water-soluble products
6. Emulsifiable concentrates
7. Water-soluble additives
8. Remaining quantity of water

Maintain constant agitation during application.
Carefully remove the required number of water-soluble bags from the inner overwrap packaging and carefully place them into the spray water in the mixing tank. Reseal the outer package making sure that no moisture contacts the water-soluble bags. Do not open the water-soluble bags. Allow the bags to completely dissolve. Use the maximum agitation while mixing NEXTER in the spray tank.
A defoaming agent may also be necessary. Do not attempt to dissolve the water-soluble bags directly in diesel oils or summer spray-type oils. The bags are water-soluble, not oil soluble. Boron will prevent the water-soluble bags from dissolving. If boron-containing products are to be used, the water-soluble bags containing NEXTER must be dissolved completely before the boron-containing product can be added to the spray tank. If boron-containing products have been used in previous applications, thoroughly wash the spray tank before using NEXTER. Always reseal the overwrap packaging to protect the remaining unused bags.

PREHARVEST INTERVAL
The required days between the last application and harvest are given in ( ) after each crop name.

| Citrus fruit group 10-10 (7)                    | 5.2 - 10.67      | **Apply 5.2-10.67 ounces in sufficient water to achieve thorough coverage. Use the higher rate of to ensure adequate concentration in full size trees with dense foliage.**  
When combining with summer oils, use a minimum of 5 gallons of oil and 6.6 ounces of NEXTER per acre.  
**In Florida Only -** may be applied in low volume application equipment with a minimum water volume of 20 gallons of water per acre. It is the user’s responsibility to ensure thorough spray coverage in these low volume applications.  
- Do not make more than two applications per year.  
- Do not apply more than 10.67 oz per acre per application  
- Allow a minimum of 30 days between sequential applications.  
- For rates above 5.2 ounces per acre, apply on a 90 day interval.                                                                 |
| Non-bearing citrus nursery beds or greenhouses  | 5.2 - 10.67      | **Apply 5.2-10.67 ounces in sufficient water to achieve thorough coverage.**  
- Do not make more than two applications per year.  
- Do not apply more than 10.67 oz per acre per application  
- Allow a minimum of 30 days between sequential applications.  
- For rates above 5.2 ounces per acre, apply on a 90 day interval.                                                                 |
| Cranberries (21)                                | 4.4 - 10.67      | **NEXTER** is a selective Miticide/Insecticide that controls southern red mite in cranberries when used at recommended rates. Complete spray coverage of both upper and lower leaf surfaces is essential for optimal performance.  
Applications should be made either early season (mid-May to mid-June) or after fruit set (mid-July through August).  
May be applied by chemigation or by ground equipment. Sufficient water volume is necessary to obtain complete coverage of the spray target. Apply 3.5-7.0 ounces of NEXTER in no less than 100 gallons and no more than 600 gallons of water per acre.  
If using chemigation, use an injection system protected by backflow equipment.  
- Do not make more than two applications per year.  
- Do not apply more than 10.67 oz per acre per application  
- Allow a minimum of 30 days between sequential applications.                                                                 |
| Small fruit vine climbing subgroup, except fuzzy kiwifruit 13-07F (7) | 4.4 - 10.67      | **Apply in 50-400 gallons of water per acre. NEXTER must be applied to each row for maximum coverage. Use the higher rate of NEXTER to ensure adequate concentration in mature vineyards with dense foliage.**  
- Do not make more than two applications per year.  
- Do not apply more than 10.67 oz per acre per application  
- Allow a minimum of 30 days between sequential applications.                                                                 |
| Low Growing berry subgroup 13-07G, except cranberry (1) | 4.4 – 10.67     | **Apply in 50-400 gallons of water per acre. NEXTER must be applied to each row for maximum coverage. Use the higher rate of NEXTER to ensure adequate concentration in mature vineyards with dense foliage.**  
- Do not make more than two applications per year.  
- Do not apply more than 10.67 oz per acre per application  
- Allow a minimum of 30 days between sequential applications.                                                                 |
| Tree nut group 14-12 (7)                        | 4.4 - 10.67      | **Apply in 100-400 gallons for water per acre for tree nuts and pistachios. Use the higher rate to ensure adequate concentration in full sized trees with dense foliage.**  
For best control, pest populations must be building with primarily immature stages present at time of application.  
**Specifically for almonds:** Applications may be made earlier from shuck split through midsummer.  
- Do not make more than two applications per year.  
- Do not apply more than 10.67 oz per acre per application  
- Allow a minimum of 30 days between sequential applications.                                                                 |
**USE RESTRICTIONS**

- Do not apply NEXTER by air.
- Except for cranberries, do not apply through any type of irrigation equipment.
- Do not use less than 100 gallons of water per acre except the following:
  - 50 gallons on grapes and pistachios
  - 20 gallons on citrus grown in Florida
- Drift: Do not apply NEXTER when weather conditions favor drift to surface water. Do not apply within 110 feet upwind of surface water or when windspeed is above 8 mph. Do not apply during a temperature inversion.
- NEXTER is not for sale, distribution, or use in Nassau and Suffolk counties in New York State. In the remainder of the state, read and follow all applicable directions, restrictions and precautions on this label.

**CHEMIGATION FOR CRANBERRIES**

NEXTER may be applied by chemigation or by ground equipment. Sufficient water volume is necessary to obtain complete coverage of the spray target. Apply 3.5-7.0 ounces of NEXTER in no less than 100 gallons and no more than 600 gallons of water per acre. If using chemigation, use an injection system protected by backflow equipment.

Chemigation: Apply this product only through solid set or hand-move sprinkler systems. Do not apply this product through any other type of irrigation system. Lack of effectiveness can result from non-uniform distribution of treated water. Use only in sprinklers that apply uniformly and have appropriate check valves. When application of pesticide is complete thoroughly flush out the injection system and sprinkler lines with a minimum volume of water for complete rinse-out. The system must contain a functional check valve or appropriate gooseneck pipe loop, vacuum relief valve and low-pressure drain appropriately located on the irrigation pipeline to prevent water source contamination from backflow. The pesticide injection pipeline must contain a functional, automatic quick-closing check valve to prevent the flow of fluid back toward the injection pump. The pesticide injection pipeline must contain a functional, normally closed, solenoid-operated valve located on the intake side of injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops, or, in cases where there is no water pump, when the water pressure decreases to the point where pesticide distribution is adversely affected. Systems must use a Venturi injector on the discharge side of the pump, or a metering pump (e.g. diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock. Do not connect an irrigation system (including greenhouse systems) used for pesticide application to a public water system unless the pesticide label prescribed safety devices for public water systems are in place.

Chemigation Systems Connected to Public Water Systems:

Public water system means a system for the provision of piped water to the public for human consumption, if such a system has at least 15 service connections or regularly serves an average of at least 25 individuals daily at least 60 days of the year. Chemigation systems connected to public water systems must contain a functional reduced pressure zone (RPZ) backflow preventor, or the functional equivalent, in the water supply upstream from the point of pesticide introduction. As an additional option to the RPZ, the water from a public water system must contain a functional reduced pressure zone (RPZ) backflow preventor, or the functional equivalent, in the water supply upstream from the point of pesticide introduction.

Chemigation Systems Connected to Public Water Systems:

- Systems must use a Venturi injector on the discharge side of the pump, or a metering pump (e.g. diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock. Do not connect an irrigation system (including greenhouse systems) used for pesticide application to a public water system unless the pesticide label prescribed safety devices for public water systems are in place.

Chemigation Systems Connected to Public Water Systems:

- Systems must use a Venturi injector on the discharge side of the pump, or a metering pump (e.g. diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock. Do not connect an irrigation system (including greenhouse systems) used for pesticide application to a public water system unless the pesticide label prescribed safety devices for public water systems are in place.

**STORAGE AND DISPOSAL**

*Do not* contaminate water, food, or feed by storage or disposal.

**Pesticide Storage:** Store in a cool, dry place. This package contains water-soluble bags inside a foil liner (overwrap). The water-soluble bags dissolve in water and the contents will disperse. If all the water-soluble bags are not used, carefully reseal the overwrap. Each overwrap contains five water-soluble bags. Do not remove the water-soluble bags from the overwrap except for immediate use. If exposed to moisture, the water-soluble bags may break.

**Pesticide Disposal:** Pesticide wastes are acutely hazardous. Wastes resulting from this product may be disposed of on site or at an approved waste disposal facility. Improper disposal of excess pesticide, spray mix, or rinsate is a violation of federal law. If these wastes cannot be disposed of according to label instructions, contact the state agency responsible for pesticide regulation or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

**Container Handling:** Nonrefillable container. Do not reuse or refill this container. Offer for recycling, if available. The outer case and inner overwrap packaging of the water-soluble bag should be offered for recycling, if available or disposed of in a sanitary landfill, or by other procedures approved by state and local authorities. If burned, stay out of smoke. Do not re-use the empty packaging.
