Feed Ingredients
Beet molasses, hydrolyzed feathermeal, processed grain by-products, hydrolyzed vegetable fat, monocalcium phosphate, dicalcium phosphate, urea, limestone, zinc sulfate, manganese sulfate, copper chloride, sodium selenite, ethylenediamine dihydriodide, cobalt carbonate, vitamin A acetate, vitamin D supplement, vitamin E supplement.

*As the Insect Growth Regulator ALTOSID®

FEEDING AND MANAGEMENT INSTRUCTIONS
When used as directed NE-30 IGR will provide sufficient (S)-methoprene insect growth regulator to prevent the emergence of adult horn flies from manure of treated cattle. Existing adult horn flies will not be affected. Start feeding before horn flies appear and continue use until cold weather marks the end of the horn fly season. Allow free choice to cattle. Cattle should consume an average of 0.8 ounces of NE-30 IGR per 100 lbs. of animal body weight per day, which is equivalent to 8 ounces per day for a 1,000 pound animal.

1. Assure cattle are not starved for nutrients prior to feeding NE-30 IGR.
2. Offer cattle 1 block NE-30 IGR for every 15-25 head of cattle.
3. Remove all other self-limiting nutritional supplements.
4. Locate NE-30 IGR where cattle congregate (watering, loafing, shade areas).
5. Replenish NE-30 IGR on a regular basis as needed.
6. If intake of NE-30 IGR is below 0.8 ounces per 100 pounds animal body weight per day, increase the number of feeding locations and/or change location(s) to areas more frequented by cattle.
7. If intake of NE-30 IGR is above 0.8 ounces per 100 pounds animal body weight per day, reduce the number of feeding locations and/or change location(s) to areas less frequented by cattle.
8. Introduction of this product after adult horn fly infestation is established will require treatment of cattle with adulticides if elimination of adult fly population is desired.
