Rally® 40WSP
Fungicide

Group 3  FUNGICIDE

Refer to inside of label booklet for additional precautionary information including Directions for Use.

Notice: Read the entire label. Use only according to label directions. Before using this product, read Warranty Disclaimer, Inherent Risks of Use, and Limitation of Remedies at end of label booklet. If terms are unacceptable, return at once unopened.

EPA Reg. No. 82719-410  800-015685 / 00206378

*Trademark of Dow AgroSciences LLC
Produced for Dow AgroSciences LLC, 9330 Zionsville Road, Indianapolis, IN 46268
Active Ingredient
myclobutanil; a-butyli-a-(4-chlorophenyl)-1(3H)-1,2,4-triazole-1-propanamine ........................................... 48%
Other Ingredients .................................................................................................................. 52%
Total ........................................................................................................................................ 100%

Keep Out of Reach of Children
CAUTION
In case of emergency endangering health or the environment involving this product, call 1-800-392-5994.
Agricultural Chemical: Do not ship or store with food, feeds, drugs or clothing.

Precautionary Statements

Hazards to Humans and Domestic Animals
CAUTION
Harmful If Swallowed • Causes Moderate Eye Irritation • Harmful If Absorbed Through Skin
Avoid contact with skin, eyes or clothing. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco or using the toilet. Remove and wash contaminated clothing before reuse.

First Aid

If in eyes: Hold eye open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye. Call a poison control center or doctor for treatment advice.

If swallowed: Call a poison control center or doctor immediately for treatment advice. Have person sip a glass of water if able to swallow. Do not induce vomiting unless told to do so by a poison control center or doctor. Do not give anything by mouth to an unconscious person.

If on skin or clothing: Take off contaminated clothing. Rinse skin immediately with plenty of water for 15-20 minutes. Call a poison control center or doctor for treatment advice.

Have the product container or label with you when calling a poison control center or doctor, or going for treatment. You may also contact 1-800-662-5994 day or night, for emergency treatment information.
Personal Protective Equipment (PPE)
Applicators and other handlers must wear:
• Long-sleeved shirt and long pants
• Chemical-resistant gloves (Category A in EPA’s Chemical-Resistant Category Selection Chart)
• Shoes plus socks

User Safety Requirements
Follow manufacturer’s instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry.

User Safety Recommendations
Users should:
• Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet.
• Remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
• Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.
Engineering Controls
When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides (40 CFR 172.240(d) (4-8)), the handler PPE requirements may be reduced or modified as specified in the WPS.

Environmental Hazards
For terrestrial uses, do not apply directly to water or to areas where surface water is present, or to intertidal areas below the mean high water mark. Do not contaminate water when disposing of equipment washwaters or rinsates. Do not apply when weather conditions favor drift or runoff from areas treated.

Directions for Use
It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Read all Directions for Use carefully before applying. Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your state or tribe, consult the agency responsible for pesticide regulation.
**Agricultural Use Requirements**

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR Part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 24 hours.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil or water, is:

- Coveralls
- Chemical-resistant gloves (Category A in EPA's chemical-Resistant Category Selection Chart)
- Shoes plus socks
Storage and Disposal

Do not contaminate water, food or feed by storage or disposal.

Pesticide Storage: Store in a cool dry area above freezing. If in a water soluble pouch, the water soluble pouch may become brittle at storage temperatures below 32°F, but the fungicide is not affected.
Do not remove the water soluble pouches from the container except for immediate use.

Pesticide Disposal: Wastes resulting in the use of this product must be disposed of on site or at an
approved waste disposal facility.

Container Handling: Nonrefillable container. Do not reuse or refill this container. Completely empty
bag into application equipment. Then offer for recycling if available, or dispose of in a sanitary landfill,
or by incineration, or by other procedures allowed by state and local authorities. Dispose of the empty
outer foil pouch in the trash as long as WSP is unbroken.

General Information

Rally® 40WSP fungicide is a systemic, protectant and curative fungicide for the control of specific diseases
mentioned on this label. Optimum disease control is achieved when the fungicide is applied in a regularly
scheduled preventative spray program.
General Use Precautions

Fungicide Resistance Management
Rally 40WSP belongs to the sterol demethylation inhibitor (DMI) class of fungicides and is classified as Group 3 Fungicide by EPA. Since certain fungi can develop resistance to this class of products, the use of Rally 40WSP should be part of a resistance management strategy that includes alternation and/or tank mixing with another fungicide mode of action. After two consecutive applications of Rally 40WSP, another myclobutanil product or another DMI, rotate to a product that is effective on the target pathogen and has a mode of action different from Rally 40WSP. Apply the alternate products within the intervals specified on the label for Rally 40WSP. Do not apply Rally 40WSP at rates below those specified on the label. If tank mixing, use the full label rate of Rally 40WSP with the full label rates of other products effective on the target pest. Consult your local or state agricultural authorities for resistance management strategies that are appropriate for your disease management program.

Handling Precautions for Water Soluble Packets: Rally 40WSP is packaged in water soluble pouches. Do not remove water soluble packet from the overpack except for immediate use. Do not allow water soluble pouches to come into contact with water prior to use. Do not handle water soluble pouches with wet hands or wet gloves. Do not open water soluble packets. Do not remove packets from overwrap except to add the intact packet directly into the spray tank. Do not split packets. Carefully reseal package containing unopened water soluble packets and protect package from moisture.
Application Guidelines

Carefully read, understand and follow label use rates and restrictions. Scout crops on a regular basis and treat when disease first appears or when conditions favor disease development. Lower label rates and 14-day application intervals may be used for small plants and under low disease pressure conditions. Maximum label rates and shorter application intervals are recommended for large plants and for severe or threatening disease conditions. If reliable predictive modeling (risk index) systems are available, these can help to indicate disease pressure conditions.

Ground Application
Thorough coverage sprays generally result in optimum disease control. To achieve good coverage use proper spray pressure, gallons per acre, nozzles, nozzle spacing and tractor speed. Consult spray nozzle and accessory catalogues for specific information on proper equipment calibration.

Aerial Application
Apply in a minimum of 10 gallons of water per acre. Avoid application under conditions when uniform coverage cannot be obtained or when excessive spray drift may occur.

Chemigation Application
Rally 40WP must be applied on a regular protector fungicide schedule, not an irrigation schedule. If irrigation cycles are less frequent than the application intervals for Rally 40WP, ground or aerial applications must supplement chemigation applications to achieve adequate disease control.
Special Use Precautions for Sprinkler Irrigation:

- Apply Rally 40WSP only through the following sprinkler irrigation systems: center pivot, lateral move, end tow, side (wheel) roll, traveler, solid set, or hand move irrigation systems. Do not apply this product through any other type of irrigation system.
- Crop injury, lack of effectiveness or illegal pesticide residues in the crop can result from non-uniform distribution of treated water.
- If you have questions about calibration, you should contact State Extension Service specialists, equipment manufacturers or other experts.
- Do not connect an irrigation system (including greenhouse systems) used for pesticide application to a public water system unless the pesticide label-prescribed safety devices for public water systems are in place.
- A person knowledgeable of the chemigation system and responsible for its operation, or under the supervision of the responsible person, shall shut the system down and make necessary adjustments should the need arise.

Before applying Rally 40WSP through sprinkler irrigation equipment, the chemigation system must meet the following specifications:

- Public water system means a system for the provision to the public of piped water for human consumption if such system has at least 15 service connections or regularly serves an average of at least 25 individuals daily at least 60 days out of the year.
• Chemigation systems connected to public water systems must contain a functional reduced-pressure zone (RPZ), backflow preventer or the functional equivalent in the water supply line upstream from the point of pesticide introduction. As an option to the RPZ, the water from the public water system should be discharged into a reservoir tank prior to pesticide introduction. There shall be a complete physical break (air gap) between the flow outlet end of the fill pipe and the top or overflow rim of the reservoir tank of at least twice the inside diameter of the fill pipe.

• Systems not connected to a public water supply must contain a functional check valve, vacuum relief valve, and low-pressure drain appropriately located on the irrigation pipeline to prevent water source contamination from back flow.

• The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.

• The pesticide injection pipeline must also contain a functional, normally closed solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.

• The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops, or in cases where there is no water pump, when the water pressure decreases to the point where pesticide distribution is adversely affected.

• The irrigation line or water pump must include a functional pressure switch, which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.
• Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.
• Do not apply when wind speed favors drift beyond the area intended for treatment.

Special Use Directions for Sprinkler Irrigation:
Center-Pivot, Lateral Move, End Tow, and Traveler Irrigation Equipment (use only with electric or oil hydraulic drive systems that uniformly distributes water):
• Determine size of area to be treated.
• Determine the time required to apply no more than 1/4 inch water (6.750 gallons of water per acre) over the area to be treated when the system and injection equipment are operated at normal pressures recommended by the equipment manufacturer. Run system at 80 to 95% of manufacturer's rated capacity.
• Using only water, determine the injection pump output when operated at normal line pressure.
• Determine the amount of Rally 40WSP required for treatment area.
• Add the required amount of Rally 40WSP and sufficient water to meet the injection time requirements of the solution tank.
• Maintain constant solution tank agitation during the injection period.
• Stop injection equipment after treatment is completed. Continue to operate the system until Rally 40WSP solution has cleared the sprinkler head.
Solid-Set, Slide (Wheel) Roll, and Hand Move Irrigation Equipment:

- Determine acreage covered by sprinkler.
- Fill injector solution tank with water and adjust flow rate to use contents over a 10 to 30 minute interval.
- Determine the amount of Rally 40WSP required for treatment areas.
- Add the required amount of Rally 40WSP into the same quantity of water used to calibrate the injection equipment.
- Maintain constant solution tank agitation during the injection periods.
- Operate system at normal pressures recommended by the manufacturer of the injection equipment and used for the time interval established during calibration.
- Inject Rally 40WSP at the end of the irrigation cycle or as a separate application to maximize foliar fungicide retention.
- Stop injection equipment after treatment is completed. Continue to operate the system until Rally 40WSP solution has cleared the last sprinkler head.

Mixing Directions

Determine the number of acres to be treated, the label use rate and the gallons to be applied per acre. Prepare only the amount of spray solution required to treat the measured acreage. Careful calibration of spray equipment is recommended prior to use.

Fill the tank with one-half of the total amount of water required for the load. Start agitation and maintain
agitation throughout mixing and application. Add the required number of unopened pouches (as
determined by the dosage recommendations) directly into the spray tank. Water soluble packets will
float on the surface until the water soluble film dissolves and releases the product. Handling packets with
hands should be minimized. Always place Rally 40WSP into solution prior to adding co-applied agricultural
chemicals registered for use on specific crop or crops being treated. Complete filling the tank. Before
spraying, make sure packets have completely disintegrated and product is thoroughly and uniformly mixed.
Depending upon the water temperature and the degree of agitation, the pouches and product should
dissolve completely within approximately 10 minutes from the time they were added to the water.

Compatibility
Rally 40WSP is compatible with most commonly used agricultural fungicides, insecticides, growth
regulators, micronutrients and spray adjuvants. When preparing tank mixes, user should consult spray
compatibility charts or State Cooperative Extension Service Specialists prior to actual use. When an
adjuvant is to be used with this product, Dow AgroSciences recommends the use of an appropriate
Chemical Producers and Distributors Association certified adjuvant.

Note: Rally 40WSP is compatible with boron and spray oils; however, the water-soluble pouches must be
completely dissolved before adding spray oils or products containing boron to spray mixtures.
Rotational Crop Restriction

Crops on this label may be planted immediately after the last treatment. Do not plant other crops within 30 days after the last application. **Note:** When using Rally 40WSP with other registered pesticides, always refer to rotational restrictions and precautions on the other product’s label and comply with the most restrictive rotational guidelines.

General Use Directions for Tree Fruits

Best control of labeled diseases is achieved when Rally 40WSP is applied on a 7- to 10-day application schedule.

Rally 40WSP is a systemic fungicide and does not redistribute with rainfall after application. Application equipment spray nozzles should be adjusted to apply a uniform spray throughout the entire tree canopy.

Use the following as guidance in determining the amount of Rally 40WSP to be used per 100 gallons of spray or per acre. Refer to specific tree fruit use directions to determine actual use rates for the control of labeled diseases.
Determination of Use Rates on an Acre Basis

The amount of Rally 40WSP required per acre varies with tree size and the volume of fruit and foliage to be treated. The following summary table may be used as additional guidance for the determination of appropriate per acre use rates for Rally 40WSP.

<table>
<thead>
<tr>
<th>Tree Height (ft)</th>
<th>Apple and Mayhaw</th>
<th>Stone Fruits</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;10</td>
<td>2.5 - 3</td>
<td>2.5 - 4</td>
</tr>
<tr>
<td>15</td>
<td>3.75 - 6</td>
<td>4 - 6</td>
</tr>
<tr>
<td>≥20</td>
<td>5 - 10</td>
<td>6</td>
</tr>
</tbody>
</table>

*For apple scab control, always tank mix Rally 40WSP with a multi-site product such as Dithane*.

Concentrate Spray Applications

Rally 40WSP should be used at the specified use rate per acre in either dilute or concentrate sprays. The following formula should be used to determine the equivalent amount of product per acre in 2X, 3X, etc., spray solutions:

\[
\text{Oz of Rally 40WSP per acre} \times 100 = \text{Oz of Rally 40WSP per 100 gallons}
\]

Spray volume per acre (gallons)
Example: An apple orchard consisting of apple trees 10 feet in height will require 5 oz of Rally 40WSP for adequate apple scab control. Application equipment has been calibrated to apply 80 gallons spray per acre, therefore:

\[
\frac{5 \text{ oz of Rally 40WSP per acre} \times 100}{80 \text{ gallons per acre}} = 6.25 \text{ oz of Rally 40WSP per 100 gallons}
\]

Dilute, Thorough Coverage Application
Dilute thorough coverage applications are based on the amount of spray solution required to thoroughly wet trees until spray run-off. The following specific use directions for apple and mayhaw utilize a 400 gallon per acre dilute basis and the specific use directions for stone fruits utilizes a 250 gallon per acre dilute basis.
## Uses

**Almond**

Best disease control is achieved with thorough coverage sprays applied on a protective schedule that does not exceed 10 days.

| Asparagus rust (Puccinia spp.) | 5 (2 oz ai) | Begin applications to the developing ferns after harvest has taken place. Reapply on a protectant schedule not to exceed 14 days. Apply with a spray adjuvant recommended and registered for this specific use pattern. | • **Preharvest Interval:** Do not apply within 180 days of harvest in all states except California. In California, either a 30- or 180-day preharvest interval may be used.  
• Do not apply to harvestable spears.  
• 180-day preharvest interval: Do not make more than 6 applications (0.125 lb ai) per growing season. This is equivalent to 30 oz of product (0.75 lb ai) per acre per year.  
• 30-day preharvest interval: Do not make more than 4 applications (0.125 lb ai) or 20 oz of product (0.5 lb ai) per acre per year. |

**Terms and Conditions of Use**

If terms of the following Warranty Disclaimer, Inherent Risks of Use, and Limitation of Remedies are not acceptable, return unopened package at once to the seller for a full refund of purchase price paid. Otherwise, use by the buyer or any other user constitutes acceptance of the terms under Warranty Disclaimer, Inherent Risks of Use and Limitation of Remedies.
Warranty Disclaimer

Dow AgroSciences warrants that this product conforms to the chemical description on the label and is reasonably fit for the purposes stated on the label when used in strict accordance with the directions, subject to the inherent risks set forth below. TO THE EXTENT PERMITTED BY LAW, Dow AgroSciences MAKES NO OTHER EXPRESS OR IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR ANY OTHER EXPRESS OR IMPLIED WARRANTY.

Inherent Risks of Use

It is impossible to eliminate all risks associated with use of this product. Plant injury, lack of performance, or other unintended consequences may result because of such factors as use of the product contrary to label instructions (including conditions noted on the label, such as unfavorable temperature, soil conditions, etc.), abnormal conditions (such as excessive rainfall, drought, tornadoes, hurricanes), presence of other materials, the manner of application, or other factors, all of which are beyond the control of Dow AgroSciences or the seller. To the extent permitted by law, all such risks shall be assumed by buyer.
Limitation of Remedies

To the extent permitted by law, the exclusive remedy for losses or damages resulting from this product (including claims based on contract, negligence, strict liability, or other legal theories), shall be limited to, at Dow AgroSciences' election, one of the following:

1. Refund of purchase price paid by buyer or user for product bought, or
2. Replacement of amount of product used

Dow AgroSciences shall not be liable for losses or damages resulting from handling or use of this product unless Dow AgroSciences is promptly notified of such loss or damage in writing. In no case shall Dow AgroSciences be liable for consequential or incidental damages or losses.

The terms of the Warranty Disclaimer, Inherent Risks of Use, and Limitation of Remedies cannot be varied by any written or verbal statements or agreements. No employee or sales agent of Dow AgroSciences or the seller is authorized to vary or exceed the terms of the Warranty Disclaimer or Limitation of Remedies in any manner.

Fungicide

Dow AgroSciences
Rally 40WP

First Aid (Cont.)
If on skin or clothing: Take off contaminated clothing. Rinse skin immediately with plenty of water for 15-20 minutes. Call a poison control center or doctor for treatment advice. Have person sip a glass of water if able to swallow. Do not induce vomiting unless told to do so by a poison control center or doctor. Do not give anything by mouth to an unconscious person.

Personal Protective Equipment (PPE)
Applicators and other handlers must wear:
• Long-sleeved shirt and long pants
• Chemical-resistant gloves (Category A in EPA's Chemical-Resistant Category Selection Chart)
• Shoes plus socks

User Safety Requirements
Follow manufacturer's instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry.

User Safety Recommendations
Users should:
• Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet.
• Remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
• Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

Engineering Controls
When handlers use closed systems, enclosed cabinets, or equipment in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170.420(c)(4)(i)], the handler PPE requirements may be reduced or modified as specified in the WPS.

Environmental Hazards
For terrestrial uses, do not apply directly to water or to areas where surface water is present; or to irrigation areas below the mean high water mark. Do not contaminate water when disposing of equipment washwater or rinsates. Do not apply when weather conditions favor drift or runoff from treated areas.

Agricultural Use Requirements
Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR Part 190. Refer to the label booklet under "Agricultural Use Requirements" in the Directions for Use section for information about this standard.

Storage and Disposal
Do not contaminate water, food, or feed by storage and disposal.

Pesticide Storage: Store in a cool dry area above freezing. If in a water-soluble pouch, the water-soluble pouch may become brittle at storage temperatures below 32°F but the fungicide is not affected. Do not remove the water-soluble pouches from the container except for immediate use.

Pesticide Disposal: Wastes resulting in the use of this product must be disposed of on site or at an approved waste disposal facility.

Container Handling: Nonrefillable container. Do not reuse or refill this container. Completely empty bag into application equipment. Then offer for recycling if available, or dispose of in a sanitary landfill, or by incineration, or by other procedures allowed by state and local authorities. Dispose of the empty outer bag in the trash as long as WSP is unbroken.

Refer to label booklet for Directions for Use.
Notice: Read the entire label. Use only according to label directions. Before using this product, read Warranty Disclaimer, Inherent Risks of Use, and Limitation of Remedies at end of label booklet. If terms are unacceptable, return at once unopened.

In case of emergency endangering health or the environment involving this product, call 1-800-982-9994.

Agricultural Chemical: Do not ship or store with food, feeds, drugs or clothing.

EPA Reg. No. 62719-410
EPA Est. 67545-AZ-001

Keep Out of Reach of Children
CAUTION

Precautionary Statements

Hazard to Humans and Domestic Animals
Harmful if Swallowed: Causes Moderate Eye Irritation: Harmful if Absorbed Through Skin
Avoid contact with skin, eyes or clothing. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco or using the toilet. Remove and wash contaminated clothing before reuse.

First Aid
If in eyes: Hold eye open and rinses slowly and gently with water for 15-20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye. Call a poison control center or doctor for treatment advice.
If swallowed: Call a poison control center or doctor immediately for treatment advice. Have person sip a glass of water if able to swallow. Do not induce vomiting unless told to do so by a poison control center or doctor. Do not give anything by mouth to an unconscious person.
