CROSSROAD®

Low Volatile Weed and Brush Herbicide

For the control of most kinds of unwanted trees and brush, as well as annual and perennial broadleaf weeds on rangeland, permanent grass pastures, conservation reserve program (CRP) acres, fence rows, non-irrigation ditch banks, roadsides, other non-crop areas and industrial sites.

ACTIVE INGREDIENTS:
2.4-dichlorophenoxyacetic acid, butoxyethanol ester 34.4%
3,5,6-inchloro-2-pyridinylaminothiophenylmethanol ester 16.5%
INERT INGREDIENTS 49.1%
TOTAL 100%

KEEP OUT OF REACH OF CHILDREN

CAUTION - PRECAUCION

IF SWALLOWED: Immediately call a poison control center or doctor. Do not induce vomiting, unless told to do so by a poison control center or doctor. Do not give any liquid to the person. Do not give anything by mouth to an unconscious person.

IF INHALED: Move person to fresh air. If person is not breathing, call 911 or an ambulance, then give artificial respiration. If necessary, give booster shots as needed. Call a poison control center or doctor for further instructions.

IF IN EYES: Hold eye open and rinse slowly and gently with water for 15 to 20 minutes. Remove contact lenses, if present, after the first 5 minutes. Continue rinsing eye. Call a poison control center or doctor for treatment advice.

NOTE TO PHYSICIAN: This product may pose an aspiration hazard. Contains petroleum dimethylates.

See inside booklet for additional PRECAUTIONARY STATEMENTS.

PRECAUTIONARY STATEMENTS

HAZARDS TO HUMANS AND DOMESTIC ANIMALS

Harmful if swallowed. Causes moderate eye irritation. Prolonged or frequent exposure to skin contact may cause allergic skin reactions in some individuals. Some materials that are chemical-reactive to this product may be made of tank, tank, tank rubber, eruvcpr rubber, or tank. If you want more caution, follow the instructions for Category E on the EPA chemical-resistance category selection chart.

All mixers, loaders, applicators, and other handlers must wear:
1. Long-sleeved shirt and long pants
2. Shoes and socks
3. Chemical-resistant gloves (except for pilots)
4. Chemical-resistant apron when mixing or loading, cleaning up spills or equipment, or otherwise exposed to the concentrate.

See "ENGINEERING CONTROLS" for additional requirements.

ENGINEERING CONTROLS

Plots must use an enclosed cockpit that meets the requirements listed in the WPS for agricultural pesticides [40 CFR 170.249(d)(6)]. When handlers use closed systems, enclosed cab, or aircraft in a manner that meets the requirements listed in the WPS [40 CFR 170.249(d)(4-6)], the handler PPE requirements may be reduced or modified as specified in the WPS.

USER SAFETY RECOMMENDATIONS

Users should:
1. Wash hands before eating, drinking, chewing gum, using tobacco, or using the toilet.
2. Remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
3. Remove PPE immediately after handling this product. Wash the outside of gloves before using. As soon as possible, wash thoroughly and change into clean clothing.

ENVIRONMENTAL HAZARDS

This pesticide is toxic to fish and aquatic invertebrates. Do not apply directly to water or to areas where surface water is present, or to intertidal areas below the mean high water mark. Drift and runoff may be hazardous to aquatic organisms at water adjacent to treated areas. Do not contaminate water when disposing of equipment washwater or rinsates. Apply this product only as directed on label. 2,4-D has properties and characteristics associated with chemicals detected in groundwater. This use of this chemical in areas where soils are permeable, particularly where the water table is shallow, may result in groundwater contamination. Application around a well or well may result in contamination of drinking water or groundwater. Tideways has properties and characteristics associated with chemicals detected in groundwater. The use of this chemical in areas where soils are permeable, particularly where the water table is shallow, may result in groundwater contamination.

Mixing and Loading: Most cases of groundwater contamination involving other herbicides such as 2,4-D have been associated with mixing/loading and disposal sites. Caution should be exercised when handling 2,4-D pesticides at such sites to prevent contamination of groundwater supplies. Use of closed systems for mixing or transferring this product will reduce the probability of spills. Placement of the mixing/loading equipment on an impervious pad to contain spills will help prevent groundwater contamination.

PHYSICAL OR CHEMICAL HAZARDS

Combustible. Do not use or store near heat or open flame.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Read all Directions for Use carefully before applying.

Use of this product on certain portions of California, Oregon, and Washington is subject to the January 22, 2004 Order for Insecticidal Relief in Washington County, Oregon, and Washington. For further information, please refer to EPA Web site: http://www.epa.gov/opa/ rtna/op네요t/index.html.

AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and the Worker Protection Standards, 40 CFR Part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry intervals. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted-entry interval (REI) of 2 hours.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as: sprays, soil, or water is:
1. Gloves
2. Chemical-resistant gloves made of any material listed as a PPE
3. chemical-resistant apron
4. chemical-resistant apron when mixing or loading, cleaning up spills or equipment, or otherwise exposed to the concentrate.

Do not contaminate water, farm site, or food. Do not contaminate water, farm site, or food. Do not contaminate water, farm site, or food. Do not contaminate water, farm site, or food. Do not contaminate water, farm site, or food. Do not contaminate water, farm site, or food. Do not contaminate water, farm site, or food. Do not contaminate water, farm site, or food. Do not contaminate water, farm site, or food. Do not contaminate water, farm site, or food.
STORAGE AND DISPOSAL

Do not contaminate water, food or feed by storage or disposal.
PESTICIDE STORAGE: Store above 10°F or agitate before use.
PESTICIDE DISPOSAL: Pesticide wastes are toxic. Improper disposal of excess pesticide, spray mixture, or rinse is a violation of Federal law and may contaminate groundwater. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.
CONTAINER DISPOSAL:
- Non-refillable containers: Do not reuse or refill this container. Offer for recycling if available. Triple rinse or pressure rinse container (or equivalent) promptly after emptying.
- (non-refillable 48 gallons): Triple rinse as follows: Empty the remaining contents into application equipment or a mixing tank and drain for 10 seconds after the flow begins to drop. Fill the container 1/4 full with water and recirculate. Shaker for 10 seconds. Pour rinse into application equipment or a mixing tank or store rinse for later use or disposal. Drain for 10 seconds after the flow begins to drop. Repeat this procedure two more times.
- (non-refillable 256 gallons): Triple rinse as follows: Empty the remaining contents into application equipment or a mixing tank. Fill the container 1/4 full with water. Replace and tighten closures. Tilt container on its side and roll it back and forth, ensuring at least one complete revolution, for 30 seconds. Stand the container on its end and tip it back and forth several times. Turn the container over onto its other end and tip it back and forth several times. Empty the rinse into application equipment or a mixing tank or store rinse for later use or disposal. Repeat this procedure two more times.
- Pressure rinse as follows: Empty the remaining contents into application equipment or a mixing tank and continue to drain for 10 seconds after the flow begins to drop. Fill container up to over application equipment or a mixing tank or collect rinse in a mixing tank for later use or disposal. Insert pressure fitting into the side of the tank and rinse with at least 40 psi at least 30 seconds. Drain for 10 seconds after the flow begins to drop.
- Reusable container (250 gallon & bulk): Rinse the container with pesticide only. Do not reuse this container for any other purpose. Cleaning the container before final disposal is the responsibility of the person disposing of the container. Before reusing it is the responsibility of the willer.
- To clean the container before final disposal, empty the remaining contents from the container into an application equipment or a mixing tank. Fill the container with at least 10 percent full with water. Agitate vigorously or recirculate water with the pump for 5 minutes. Pour or rinse rinse into application equipment or drain collection system. Repeat this rinsing process two more times.

PRODUCT INFORMATION

CROSBY® will control many species of woody plants, annual and perennial broadleaf weeds, growing on range/rangeland, permanent grass pastures, CRP, fence rows, non-irrigation ditch banks, roadbeds, other non-crop areas, and industrial sites.

PRECAUTIONS AND RESTRICTIONS
- For use on plants in non-crop and non-irrigated areas only. Do not apply to crops, timber, or other plants being grown for sale or other commercial use, or for commercial food production, or for research purposes.
- Do not apply this product to plants in a way that will contaminate water, food or feed by storage or disposal.
- Do not apply this product to plants in a way that will contaminate water, food or feed by storage or disposal.
- Do not apply this product to plants in a way that will contaminate water, food or feed by storage or disposal.
- Do not allow worker entry into areas until sprays have dried, unless applicator and other handler PPE is worn.
- The state of Arizona has approved CROSBY® for use on plants grown for commercial production, specifically forests grown for commercial timber production, on or adjacent to grazing areas.
- This product may not be applied to areas that are to be cut and sold for commercial purposes.
- Chemicals are prohibited. Do not apply any type of irrigation system.
- Optimal control is obtained when foliar sprays are applied during warm weather. As target weeds are actively growing.
- Applications made under drought stress conditions will result in reduced control.
- Use low spray pressure to minimize spray drift.
- Do not use an airbrush.
- Do not use in newly seeded grasses until grass has established a good root system and is growing.
- Do not apply this product to plants in a way that will contaminate water, food or feed by storage or disposal.
- Do not apply this product to plants in a way that will contaminate water, food or feed by storage or disposal.
- Do not apply this product to plants in a way that will contaminate water, food or feed by storage or disposal.
- Do not apply this product to plants in a way that will contaminate water, food or feed by storage or disposal.
- Do not apply this product to plants in a way that will contaminate water, food or feed by storage or disposal.
- Do not apply this product to plants in a way that will contaminate water, food or feed by storage or disposal.
- Do not apply this product to plants in a way that will contaminate water, food or feed by storage or disposal.
- Do not apply this product to plants in a way that will contaminate water, food or feed by storage or disposal.
- Do not apply this product to plants in a way that will contaminate water, food or feed by storage or disposal.
- Do not apply this product to plants in a way that will contaminate water, food or feed by storage or disposal.
- Do not apply this product to plants in a way that will contaminate water, food or feed by storage or disposal.
- Do not apply this product to plants in a way that will contaminate water, food or feed by storage or disposal.
- Do not apply this product to plants in a way that will contaminate water, food or feed by storage or disposal.
- Do not apply this product to plants in a way that will contaminate water, food or feed by storage or disposal.
- Do not apply this product to plants in a way that will contaminate water, food or feed by storage or disposal.
- Do not apply this product to plants in a way that will contaminate water, food or feed by storage or disposal.
- Do not apply this product to plants in a way that will contaminate water, food or feed by storage or disposal.
- Do not apply this product to plants in a way that will contaminate water, food or feed by storage or disposal.
- Do not apply this product to plants in a way that will contaminate water, food or feed by storage or disposal.
- Do not apply this product to plants in a way that will contaminate water, food or feed by storage or disposal.
- Do not apply this product to plants in a way that will contaminate water, food or feed by storage or disposal.
- Do not apply this product to plants in a way that will contaminate water, food or feed by storage or disposal.
- Do not apply this product to plants in a way that will contaminate water, food or feed by storage or disposal.
- Do not apply this product to plants in a way that will contaminate water, food or feed by storage or disposal.
- Do not apply this product to plants in a way that will contaminate water, food or feed by storage or disposal.
- Do not apply this product to plants in a way that will contaminate water, food or feed by storage or disposal.
- Do not apply this product to plants in a way that will contaminate water, food or feed by storage or disposal.
- Do not apply this product to plants in a way that will contaminate water, food or feed by storage or disposal.
- Do not apply this product to plants in a way that will contaminate water, food or feed by storage or disposal.
- Do not apply this product to plants in a way that will contaminate water, food or feed by storage or disposal.
- Do not apply this product to plants in a way that will contaminate water, food or feed by storage or disposal.
- Do not apply this product to plants in a way that will contaminate water, food or feed by storage or disposal.
- Do not apply this product to plants in a way that will contaminate water, food or feed by storage or disposal.
- Do not apply this product to plants in a way that will contaminate water, food or feed by storage or disposal.
- Do not apply this product to plants in a way that will contaminate water, food or feed by storage or disposal.
- Do not apply this product to plants in a way that will contaminate water, food or feed by storage or disposal.
- Do not apply this product to plants in a way that will contaminate water, food or feed by storage or disposal.
- Do not apply this product to plants in a way that will contaminate water, food or feed by storage or disposal.

Grazing and Haying Restrictions

Except for lactating dairy animals, there are no grazing restrictions following application of this product.

Grazing Lactating Dairy Animals:
- Do not allow lactating dairy animals to graze treated areas until the next growing season following application of this product.
- Do not harvest hay for 14 days after application.
- Grazed areas of non-cropland and forestry sites may be spot treated if they comprise no more than 10% of the total grazable area.

Slaughter Restrictions:
- During the season of application, withdraw livestock from grazed treated areas at least 3 days before slaughter.

AVOID INJURIOUS SPRAY DRIFT

Applications should be made only when winds are appropriate for driftless application. When spraying, always point the boom and mist sprayer away from livestock, crops, and ornamental plants near enough to be injured. Sprays drift can be

Avoiding spray drift at the proper time is crucial for efficient application.

A variety of factors, including wind, ambient, can influence:

controlling droplet size

- Spray volume: Use high-low ratio.
- Pressure: Use the lower limits. When higher flow rates are not at the pump or in the line.
- Nozzle orientation: One or more than one will reduce drift.
- Nozzle type: Use a nozzle designed for low-noise, broad-spectrum coverage.

Wind Speed

Do not apply at wind speeds exceeding 10 mph, including, but not limited to, 2,4-D tolerant species and susceptible plants.

Susceptible Plants

Do not apply under irrigation or for sale, use, or consumption, including, but not limited to, vegetables where the same can be consumed.

Other State and Local Regulations

Applicants must follow all State and local regulations, as well as directions on the label and on-site.

Equipment

Always have adequate equipment and personnel.

For aerial equipment, the boom is recommended for the lowest winds, unless the greater height is required. When applying, always use the proper equipment and personnel.
SPRAY DRIFT

Avoiding spray drift at the application site is the responsibility of the applicator. The interaction of many equipment- and weather-related factors determine the potential for spray drift. The applicator and the grower are responsible for considering all those factors when making decisions.

A variety of factors including weather conditions (e.g., wind direction, wind speed, temperature, humidity), and method of application (e.g., ground, aerial) can influence spray drift. The applicator must be fully informed of all factors and make appropriate adjustments when applying this product.

Controlling Droplet Size

- **Volume**: Use the highest practical spray volume. Nozzles with higher rated flows produce larger droplets.
- **Pressure**: Use the lower spray pressures recommended for the nozzles. Higher pressure reduces droplet size and does not improve canopy penetration. Always use the lowest flow rates recommended for the nozzles.
- **Number of Nozzles**: Use the minimum number of nozzles that provide uniform coverage.
- **Nozzle Orientation**: Orient nozzles so that the spray is released backward (the downward angle of the nozzle on fixed wing aircraft should not be greater than 30°) or parallel to the airstream on helicopters, to produce larger droplets than other orientations. Significant deflection from the normal will reduce droplet size and increase drift control.
- **Nozzle Type**: Use a nozzle type that is designed for the intended application. With most nozzle types, narrower spray angles produce larger droplets. Consider using lower droplet nozzles. Some nozzle models are CP Luid or flat fans with angles of 20° to 65°. 504A stream nozzles oriented straight-on produce larger droplets than other nozzle types. If using nozzle components, do not use nozzles finer than the 50 mesh size on which plugging is possible.

Wind Speed

Do not apply at wind speeds greater than 15 mph. Only apply when the wind direction favors on-target deposition and is not sensitive areas, including, but not limited to, residential areas, bodies of water, known habitat for non-target species, and dirt roads within 500 feet downstream. Also apply a medium spray, Ie vate one or two nozzles at the downwind edge of the treated field.

Temperature Inversions

If the temperature changes by more than 5°F in 5 minutes, the applicator must use the same operating conditions as the temperature inversion exists, or by establishing stable atmospheric conditions exist at or below the nozzle height. Do not make applications into areas of temperature inversions or stable atmospheric conditions.

2.4-D ethers may volatilize during conditions of low humidity and high temperatures. Do not apply during conditions of low humidity and high temperatures.

Sustainable Plants

Do not apply under circumstances where spray drift may occur to food, forage, or other plantings that might be damaged or crops that are rendered unfruitful for other use or consumption. Sustainable crops include, but are not limited to, cotton, corn, soybeans, and other vegetables, or tobacco. Small amounts of spray drift that might not be visible may seriously injure susceptible plantings.

Other State and Local Requirements

Applications must meet all state and local pesticide drift requirements regarding application of 2,4-D herbicides. Where states have more stringent regulations, they are operated under.

Equipment

All aerial and ground application equipment must be properly maintained and calibrated using appropriate carriers or solvents.

For aerial equipment, the boom length must not exceed 75% of the wingspan or 75% of the rotor diameter. The boom length must not exceed 75% of the wingspan or 75% of the rotor diameter. The boom length must not exceed 75% of the wingspan or 75% of the rotor diameter.

Nozzles must always point downwind parallel with the airstream and never be pointed downward more than 45 degrees. Where states have more stringent regulations, they must be observed.

Release spray at the lowest height consistent with efficiency and flight safety. Do not release spray at a height greater than 10 feet above the crop canopy unless a greater height is required for aircraft safety. This requirement does not apply to forestry or rights-of-way applications.

When applications are made in a crosswind, the swath will be displaced downwind. The applicator must compensate for this by adjusting the path of the aircraft upward.

For ground boom applications, do not apply with a nozzle height greater than 4 feet above the crop canopy.
MIXING DIRECTIONS
CROSSROAD® mixed in water should be agitated continuously during application to prevent separation.

Water Spray:
- Charge the spray tank 1/3 to 1/2 full with clean water.
- Add the label rate of CROSSROAD®.
- Add balance of water with agitation running.
- Mix thoroughly, maintain moderate agitation while spraying.

APPLICATION INSTRUCTIONS
RANGE LAND & PASTURE

Broadcast Treatment (Ground Equipment and Helicopters):
- Apply up to 4 quarts of CROSSROAD® per acre in sufficient water to deliver 10 to 20 gallons of total spray per acre. Actively growing weeds are most susceptible. Optimal application time for biennial and winter annual weeds is the rosette stage. Hard-to-control weeds such as fields purslane, occupy, dandelion, goldenrod, hoary alfalfa, kudzu, milkweed, perennial sowthistle, leafy spurge, and Canada thistle may require Retreatment for complete control.
- See recommendations regarding the use of drift control additives as listed in the "USE PRECAUTIONS" section under "Avoid injurious spray drift".

Spot Treatment:
- To control broadcast weeds in small areas with a hand sprayer, mix 4 to 6 ft. of CROSSROAD® in 3 gallons of water. Spray is thoroughly wet all foliage.

Note: Do not use spray removed from all compartments.

C A P I T A L

Applications should be made in dry weather conditions and avoid placing spray on areas where the water will settle. Applications should be made on days when the wind is less than 10 mph. Applications made in high winds may damage the plant material. Applications made in dry conditions may result in reduced weed control. Applications made in wet conditions may result in reduced weed control. Applications made in wet conditions may result in reduced weed control.

CONSERVATION RES
- Do not apply more than 12 quarts of CROSSROAD® per acre.
- Do not apply more than 24 quarts of CROSSROAD® per acre.
- Do not use on crops within 300 feet of the treated area.

CROSSROAD® may be mixed with liquid nitrogen fertilizer suitable for foliar broadcast application.  
Apply liquid fertilizer at rates recommended by supplier or Extension Service Specialist.

Applications should determine compatibility CROSSROAD® with liquid nitrogen with a clear glass jar test prior to mixing a full spray tank. Sometimes a suitable compatibility agent be required. Compatibility is more likely with straight liquid nitrogen fertilizer solutions (without phosphorus or potassium elements).  
PREMIX CROSSROAD® with 1 to 3 parts water may prevent incompatibility.

Fill the spray tank about half full with the liquid fertilizer then add the herbicide with agitation and complete filling the tank with water. Apply immediately and continue agitation in the spray tank during application. Do not store spray mixture. Application during very cold weather (near freezing) is not advisable.

Notes:
- Do not use spray equipment for other applications to land planted, or to be planted to susceptible plants, unless all triclopyr residues have been removed from all components of the spray equipment.

RANGE & PASTURE RESTRICTIONS:
- Do not apply more than 4 quarts per acre per application.
- Do not make more than one application per year.
- Pre-Harvest Interval is 14 days.
- If grass is to be cut for hay, Agricultural Use Requirements for the Worker Protection Standard are applicable.
- Do not apply more than 1 lb. 2.4-D a.e. per application (2 pts. product) for susceptible annual and biennial broadcast weeds.

CROSSROAD® contains 0.5 pound a.e. of 2,4-D per quart. When tank mixing with products that contain 2,4-D, do not exceed a combined total of 4.0 pounds of 2,4-D a.e. per acre per year.

CONSERVATION RESERVE PROGRAM (CRP) FOR ESTABLISHED PERMANENT GRASS STANDS

Apply CROSSROAD® to CRP acres after perennial grasses are established. Do not apply if grass is under drought stress.

Restrictions:
- When applying to CRP acres, follow all applicable State and Federal regulations. Follow the most severe growing restriction imposed by the pesticide label or by the USDA Acreage Conservation Reserve Program. After that time period, follow local (CRP) guidelines regarding cutting and harvesting restrictions.
- Do not use CROSSROAD® if forage is a desired cover crop during CRP.
- Do not use on bermudagrass or newly seeded grass.

Broadcast Application (Ground or Aerial):
- Apply 1 to 2 quarts of CROSSROAD® for small weed control or up to 4 quarts of CROSSROAD® for deep-rooted perennial and susceptible woody species control using enough water to deliver 10 or more gallons of total spray volume per acre.

CONSERVATION RESERVE PROGRAM RESTRICTIONS:
- Do not apply more than 4 quarts per acre per application.
- Do not make more than one application per year.
- Pre-Harvest Interval is 14 days (cut forage for hay).
- If grass is to be cut for hay, Agricultural Use Requirements for the Worker Protection Standard are applicable.
- For program herbs, such as Conservation Reserve Program, consult program rules to determine whether grass or hay may be used. The more restrictive requirements of the program rules or this label must be followed.

CROSSROAD® contains 0.5 pound a.e. of 2,4-D per quart. When tank mixing with products that contain 2,4-D, do not exceed a combined total of 4.0 pounds of 2,4-D a.e. per acre per year.

For bermudagrass and dormant brush treatments, follow application directions in "WOODY PLANT CONTROL".
NON-CROPLAND
(Fence rows, Non-Irrigation ditches, Roadsides, industrial sites and other non-crop areas)

High Volume Foliar Applications Through Handguns:
Using a cover or hand-cranked sprayer gun, apply a foliar spraying mixture containing up to 4 quarts of this product in sufficient water to make 100 gallons of total spray mixture. See mixing chart under "MIXING DIRECTIONS" for preparing small amounts of this to 1.5% spray mix. Spray one thorough coverage of the foliage, wetting all leaves and stem tips to the drop point. Depending on the plant size and foliage density, the total amount of required spray is usually 100 to 300 gallons per spray area.

For best results, applications should be made when woody plants are actively growing. This is most likely to occur after the initial fall frost in the spring to early summer when moisture and temperature are favorable. For multi-season re-treatment, the best time for treatment may be expected during the early to mid-growing stage.

The required spray volume will increase substantially if the brush exceeds 5 feet in height. Brush over 6 feet tall is difficult to treat efficiently. Large brush or trees may be controlled better by basal or mechanical methods.

Foliar Broadcast Sprays [Ground Equipment and Helicopter]:
Apply up to 4 quarts of this product in enough water to cover 10 to 30 gallons per spray area. Use a boom type or other broadcast spray equipment that provides uniform spray coverage over the top of the foliage and makes applications when plants are growing well. The favorable period for treatment is usually most likely to occur after the initial fall frost in the spring and continue through early summer, depending on soil moisture and other conditions. Follow-up treatment with foliar high-volume or basal type treatments may be needed, especially if treating under less than favorable conditions.

Aerial Application (Helicopter only):
Use Fire-Safe or an equivalent drift control additive as recommended by the manufacturer of the Microfoil boom, Thru-Valve boom, or equivalent drift control system. Thicker sprays prepared by using high viscosity invert systems or other drift reducing systems may be used if they control spray drift as well as Nulothod or the above mentioned booms. If a spray thickening agent is used, follow all recommendations and precautions on the product label. Do not use a thickening agent with the Microfoil or Thru-Valve booms or other systems that cannot accommodate thick sprays.

Dormant Stem Applications:
To control susceptible woody species such as mulberry rose and blackberry, mix 2 to 16 quarts of this product in diesel oil, No. 1 or No. 2 fuel oil or kerosene to make 100 gallons of spray and apply to thoroughly wet tunnel and lower stems including the root collar and any ground sprouts. Treat at any time when the brush is dormant and the buds are dry. Best results have been obtained with late winter to early spring applications. Do not treat when snow or heavy frost is present or the ground is frozen. For the most susceptible woody species such as blackberries, analogous to other deciduous or evergreen conifers, dormant treatments may be needed in accordance with the manufacturer's recommendations. Apply mixture to thoroughly wet, lower and lower stems as described above. The more tolerant species may require total oil carrier for better control. Brush over 6 feet in height is difficult to treat efficiently. Basal or mechanical methods may be better suited for control of large areas.

NON-CROPLAND RESTRICTIONS:
- Post-emergence (annual and perennial weeds):
  - Do not make more than 4 applications per year.
- Post-emergence (woody plants):
  - Do not make more than 4 applications per year.
- Applications to non-cropland areas are not applicable to treatment of commercial timber or other plants being grown for sale or other commercial use, or for commercial seed production, or for research purposes. CROSSROAD® contains 0.5 pound i.e. of 2,4-D per quart. When tank mixing with products that contain 2,4-D, do not exceed a combined total of 1.5 quarts per acre per year.

WOODY PLANT CONTROL

Easy-To-Control Species:
5 quarts/acre broadcast application or 1 to 1.5% mixtures for high-volume foliar applications.

Harder-To-Control Species:
Apply high-volume applications. 1.5% degree of control of these species:
- Buckthorn (Symphoricarpos spp.)
- Blueberries
- Common persimmon
- Frankia

Conventional Basal Bark and 5ths
For control of susceptible woody plants fuel oil or kerosene to make 100 gallons. Thoroughly wet the entire area to be treated, especially if the bark is thick and root system is extensive. Apply 70 to 100 gallons per treatment method is during early to mid spring when the soil is moist and the weather is favorable. Additional herbicide is likely needed. Old stems with thickened bark require treatment after they are one year old.

BASAL & CUT STEM RESTRICTIONS:
- Do not make more than one cut
- Do not use more than 1 quart per acre

Broadcast Treatment

To be applied only under the direct supervision of a certified applicator.

Black locust
- Hard maple
- Buckthorn (S.
- Canadian maple
- Catalpa
- Chamise
- Chickweed (camomile & mouseleaf)
- Chestnut
- Cinnamon
- Olive
- Cinnabark
- Cornflower

Apply 2 to 4 pints (0.5 to 1 lb) 2,4-D growing in full or half growth, or greening, blueberries, or blueberries can be tolerated. CROSSROAD® at 3 pints per acre. The use of 4 pints per acre (1 lb) 2,4-D for spraying early spring to early fall when applications should be made 4-6 weeks prior to harvest. Do not water for 24 hours thereafter.
**Harder-To-Control Species:**

Apply high-volume applications, 1:5% mixture, conventional basal or dormant stem applications. A broadcast rate of 8 quarts/acre will increase the degree of control of these species.

- Bushbrush
- Common pennyroyal
- Sphagnum moss
- Sweet gum
- Russian olive
- Salvinia molesta
- Vejicera cropper
- Musk thistle

**Conventional Basal Bank and Stump Applications:**

For control of susceptible woody plants and to prevent or control regrowth from cut stumps, mix 1:6 quarts of this product in diesel oil. No. 1 or No. 2 fuel oil or kerosene to make 200 gallons of spray mixture. Spray the base of trees or trunks to a height of 15 to 20 inches from the ground. Thoroughly wet all the basal banks above crown wishers and spread sprouts. Spray non-leafy materials and ground at the base of the stumps or trunks. Basal cut and stump mixtures can be made any time of the year except when snow or water prevents spraying to the ground line. Best results have been obtained with winter to early spring applications. Basal treatments are less effective on trees with diameters larger than 6 to 8 inches. For better regrowth control, cut the larger trees and treat the stumps. Treat stumps the same as the trunks and also treat the freshly cut surface. The stumps must be intact just inside the bark to be the most important area of the stump to treat.

**Turf:**

**Broadcast Treatment of Residential, Commercial, and Recreational Turf and Commercial Sod Farms**

For control of small seedlings, apply a horizontal thin line of undiluted herbicide across the sole of the target area. The remaining area must be less than 6 inches in diameter and have thinner bark to penetrate. For brushes with large diameters of stems over 3 or 4, coverage may be difficult. Base bark or dormant stem applications may be more effective. Treat when the brush is dry and rain is not forecasted. Best results are obtained when using this application method during late fall to early spring. For the term of the warranty on the label for full refund or return.

**Restrictions for Broadcast Postemergence:**

- Use a maximum of 34% 4-pints CRC. To comply with local regulations and recommendations, use a maximum of 34% 4-pints CRC. To comply with local regulations and recommendations, use a maximum of 34% 4-pints CRC.

- **Spots Treatment of Residential** Mix 1:2 fuel oil (0.75 to 0.8) and apply at any time broadcast.
RESTRICTIONS For Broadcast Application on Residential, Commercial, and Recreational Turf

Preemergence:
- Limited to 3 applications per year.
- Use a maximum of 6 pints CROSSROAD® (1.5 lbs. 2,4-D a.e.) per acre per application.
- Use a maximum of 6 pints CROSSROAD® per acre, excluding pre-application applications.

RESTRICTIONS For Broadcast Application on Commercial Sod Farms
- Limited to 2 applications per year.
- Do not exceed a maximum of 8 pints CROSSROAD® per acre (2.0 lbs. 2,4-D a.e.) per application.
- Do not exceed a maximum of 16 pints CROSSROAD® per acre (4.0 lbs. 2,4-D a.e.) per application.

Spot Treatment of Residential, Commercial, and Recreational Turf and Commercial Sod Using Portable Sprayers
Max 1 to 2 fluid ounces (0.01 to 0.03 lbs. 2,4-D a.e.) of CROSSROAD® in enough water to make 3 gallons of spray (1 to 2 quarts per 100 gallons of spray) and apply at any time broadcast treatments are susceptible to wetting foliage of undesirable plants to point of runoff.

TERMS AND CONDITIONS OF USE

If terms of the following Warranty Disclaimer, Inherent Risks of Use, and Limitation of Remedies are not acceptable, return unopened package at once to the seller for a full refund of purchase price paid. Otherwise, use by the buyer or any other user constitutes acceptance of the terms under Warranty Disclaimer. Inherent Risks of Use and Limitations of Remedies.

Warranty Disclaimer
Albaugh Inc. warrants that this product conforms to the chemical description on the label and is reasonably fit for the purposes stated on the label when used in strict accordance with the directions, subject to the inherent risks set forth below. ALBAUGH, INC. MAKES NO OTHER EXPRESS OR IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR ANY OTHER EXPRESS OR IMPLIED WARRANTY.

Inherent Risks of Use
It is impossible to eliminate all risks associated with use of this product. Plant injury, loss of performance, or other unintended consequences may result because of such factors as use of the product contrary to label instructions (including conditions noted on the label, such as unsuitable temperature, and conditions, etc.), abnormal conditions (such as excessive rainfall, drought, frost, flooding, hurricanes), presence of other materials, the manner of application, or other factors, all of which are beyond the control of Albaugh, Inc. or the seller. All such risks shall be assumed by buyer.

Limitation of Remedies
To the extent permitted by law, the exclusive remedy for losses or damages resulting from this product (including claims based on contract, negligence, about liability, or other legal theories), shall be limited to, at Albaugh, Inc.'s election, one of the following:
1. Refund of purchase price paid by buyer or user for product bought; or
2. Replacement of amount of product used.

To the extent permitted by law, Albaugh, Inc. shall not be liable for losses or damages resulting from handling or use of this product unless Albaugh, Inc. is promptly notified of such loss or damage in writing. To the extent permitted by law, in no case shall Albaugh, Inc. be liable for consequential or incidental damages or losses.

The terms of the Warranty Disclaimer and Inherent Risks of Use above and this Limitation of Remedies cannot be varied by any written or verbal statements or agreements. No employee or sales agent of Albaugh, Inc. or the seller is authorized to vary or exceed the terms of the Warranty Disclaimer or this Limitation of Remedies in any manner.
