It is a violation of Federal law to use this product in any manner inconsistent with its labeling. Do not apply this product in a manner that will contact workers or other persons, either directly or through drift. Only properly trained and certified handlers may be in the area during application. For any requirements specified by your State or Tribe, consult the agency responsible for pesticide regulation.

**Agricultural Use Requirements**

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR Part 170. The WPS applies where this product is used to protect agricultural workers on farms, forests, nurseries or greenhouses. Directions for Use and/or Personnel Protection Levels are for information about this standard.

**Non-Agricultural Use Requirements**

- **For household and other non-agricultural uses, this product is used to protect specific areas and equipment from contamination by the pesticide.**
- **Select the best judgment to control weeds.**
- **Satisfy the requirements listed in the Worker Protection Standard 40 CFR 190.103 (h) for agricultural professionals.**
- **Tools should be cleaned if used with this product.**
- **Equipment should be thoroughly decontaminated after use.**
- **Equipment should be well-labeled and decontaminated after use.**
- **Equipment should be thoroughly decontaminated after use.**
- **Equipment should be thoroughly decontaminated after use.**
- **Equipment should be thoroughly decontaminated after use.**

CAUTION

- **Avoid contact with eyes, skin, or clothing.**
- **Keep out of reach of children.**

**STORAGE AND DISPOSAL**

- **Place properly rinsed containers in a location that is accessible for return to Monsanto Company.**
- **Return Properly Rinsed Container to Monsanto for Recycling - Call 1-800-ROUNDUP (1-800-768-6387).**
- **Follow proper disposal procedures for household or other non-agricultural use.**
- **Consult your chemical dealer or Monsanto Company at 1-800-ROUNDUP (1-800-768-6387) for information about proper disposal of this product.**
- **Follow proper disposal procedures for household or other non-agricultural use.**
- **Follow proper disposal procedures for household or other non-agricultural use.**
- **Follow proper disposal procedures for household or other non-agricultural use.**
- **Follow proper disposal procedures for household or other non-agricultural use.**

**USER SAFETY RECOMMENDATIONS**

- **Keep out of reach of children.**
- **Do not use this product on premises or in areas where food is being or will be prepared, sold, served, or consumed.**
- **Do not rinse the container after use.**
- **Do not rinse the container after use.**
- **Do not rinse the container after use.**
- **Do not rinse the container after use.**

**ENVIRONMENTAL HAZARDS**

- **By making available for use in an emergency, such as a spill or equipment breakdown.**
- **Recycle properly rinsed containers to Monsanto for Recycling - Call 1-800-ROUNDUP (1-800-768-6387).**
- **Consult your chemical dealer or Monsanto Company at 1-800-ROUNDUP (1-800-768-6387) for information about proper disposal of this product.**
- **Consult your chemical dealer or Monsanto Company at 1-800-ROUNDUP (1-800-768-6387) for information about proper disposal of this product.**
- **Consult your chemical dealer or Monsanto Company at 1-800-ROUNDUP (1-800-768-6387) for information about proper disposal of this product.**

NOTE: This template can be used for a booklet with the following number of pages: 8, 12, 16, 24, 32, 40, 48, 56, 64, 72, 80, 88, 96
7.2 Tank Mixtures
This product does not provide residual weed control. This product may be tank-mixed with other herbicides to provide residual weed control such as a broad-leaf weed control product or tank-mixed with other herbicides to provide residual weed control in the soil, a "tank-mix." Preparing tank mixtures of this product as follows:

Begin filling the mixing tank or spray tank with clean water. Add the required amount of the Roundup PowerMAX Herbicide. Do not exceed the maximum application rate for this product. Always predetermine the compatibility of all tank-mix products together in the tank. (A tank-mix is the combination of two or more products used together in a spray tank.) A tank-mix that reduces or eliminates the effectiveness of any of the products in the tank mixture is to be avoided. If the spray mixture is allowed to settle, agitate thoroughly to re-suspend the spray mixture. Always read and follow all directions on the label of all products to be used in the tank mixture prior to use to determine compatibility. Overlapping the application of tank-mixed products in the field may result in reduced weed control. When a tank-mix with a generic active ingredient, such as 2,4-D, atrazine, or dicamba, diuron, pendimethalin, or any other product or material, is listed or authorized on the label of a tank-mixed product, read the entire label before use. When mixing water with this product, keep by-pass and return lines on or near the bottom of the tank to minimize mixing of weed control products. The effectiveness of this product may be reduced if it is allowed to be mixed with other products that reduce product performance.

7.3 Tank-Mixing Procedure

1. Pour a 2 to 35 gallon mixture of water or commercial grade water into the tank. Thoroughly mix the water or commercial grade water in the tank before filling with commercial grade water.
2. Depression and/or pressure water is an essential water source for this product. This product may be used with commercial grade water if it is in the mixing tank when the mixing tank is being filled. Do not mix this product with tank mixes that contain incompatible products.
3. Add individual tank-mix components to the tank as follows: wettable powder, wettable emulsifiable concentrate, or liquid concentrate. Begin filling the mixing tank or spray tank with clean water. Add the required amount of the Roundup PowerMAX Herbicide. In many cases, premixing one part per one part or one part per five parts of water will produce a tank mixture that is ready for use. Always follow the mixing and application rate requirements on the label. Keep by-pass and return lines on or near the bottom of the tank to minimize mixing of weed control products. The effectiveness of this product may be reduced if it is allowed to be mixed with other products that reduce product performance. Overlapping the application of tank-mixed products in the field may result in reduced weed control.

7.4 Mixing Spray Solution Concentrations

Prepare the desired volume of spray solution at a given concentration by:

1. Weighing the appropriate amount of the Roundup PowerMAX Herbicide and adding it to the mixing tank. To determine the amount of Roundup PowerMAX Herbicide, use the Table of Amounts of Roundup PowerMAX to determine the amount of Roundup PowerMAX to be used.
2. Measuring the appropriate amount of Roundup PowerMAX Herbicide using a graduated container and adding it to the mixing tank.

PRECAUTIONS: Tank mixtures with residual herbicides could result in reduced
performance of this product.

PRECAUTIONS: Some crop injury could occur if dicamba is applied within
6 inches of a crop that is not listed on this label.

USE INSTRUCTIONS: This product may be applied as a substitute for tillage to
control annual weeds in fallow fields. Broadcast or spot treatment application
using a sprayer with the following nozzles is recommended: 30° fan, 40° fan,
45° fan, 50° fan, 60° fan, 70° fan, 80° fan, 90° fan. Spot treatment
application using a coater, brush, or wiper applicator is also
recommended. This product is approved for the following equipment
packages: 1000, 2000, 3000, 4000, 5000, 6000, 7000, 8000, 9000,
10,000, 12,000. This product is not approved for use in
a roller applicator. Do not feed or graze grain sorghum fodder or ensile
sorghum before heading. This product may also be applied over the top of
grain sorghum stubble following harvest to
control or suppress re-growth. Apply 22 fluid ounces of this product per acre
when weeds are less than 6 inches tall, and 22 to 32 fluid ounces
per acre when weeds are over 6 inches tall.

USE INSTRUCTIONS: This product may be applied in a hooded sprayer
application using a sprayer with the following nozzles is recommended: 30° fan,
40° fan, 50° fan, 60° fan, 70° fan, 80° fan, 90° fan. This product is approved for
the following equipment packages: 1000, 2000, 3000, 4000, 5000, 6000, 7000,
8000, 9000, 10,000, 12,000. Do not use a roller applicator. Do not apply more
than 22 fluid ounces of this product per acre when used in a hooded sprayer.

USE INSTRUCTIONS: This product provides weed control and
serves as a harvest aid-to-tillage.

USE INSTRUCTIONS: This product may be applied in a tank
mixture with one of the products listed. For other
herbicides that cause sudden plant death, avoid preharvest application of this
product. For preharvest applications, this product is approved for use in
the following equipment packages: 1000, 2000, 3000, 4000, 5000, 6000, 7000,
8000, 9000, 10,000, 12,000. Do not use an applicator that is not approved
by the manufacturer. Do not spray into water or onto any crop that is
intended for animal feed or food.

USE INSTRUCTIONS: This product is designed for
use in the "APPLICATION EQUIPMENT AND TECHNIQUES" section of the label.
Observe the maximum application rates listed at the beginning of this section.

USE INSTRUCTIONS: This product may be applied in a tank
mixture with one of the products listed. For other
herbicides that cause sudden plant death, avoid preharvest application of this
product. For preharvest applications, this product is approved for use in
the following equipment packages: 1000, 2000, 3000, 4000, 5000, 6000, 7000,
8000, 9000, 10,000, 12,000. Do not use an applicator that is not approved
by the manufacturer. Do not spray into water or onto any crop that is
intended for animal feed or food.

USE INSTRUCTIONS: This product is designed for
use in the "APPLICATION EQUIPMENT AND TECHNIQUES" section of the label.
Observe the maximum application rates listed at the beginning of this section.

Chlorimuron, an herbicide that is used to destroy invading grasses and weeds, is the active ingredient of a chemical that is used to control weeds in agricultural crops. When mixed with other chemicals, it can control a wide range of weeds. Chlorimuron is a systemic herbicide, which means that it is taken up by the plant and distributed throughout its tissues. This allows it to be effective against a variety of weed species. Chlorimuron is often used in combination with other herbicides to achieve better weed control. This is especially true for resistant weeds, which can develop resistance to a single herbicide. By using a combination of chemicals, the risk of resistance development is reduced. In this way, Chlorimuron is a valuable tool in the management of weed populations in crops.
area can be harvested and fed to livestock according to the application rates

RESTRICTIONS: Make only one application to an existing crop stand per year.

PRECAUTIONS: Some stunting of CRP perennial grasses will occur if this product may be used to control sod remnants or other unwanted vegetation on CRP land. Application may be made using a wiper applicator to control tall weeds, or as a broadcast application to allow for herbicide translocation into underground plant parts. Seed time; all other crops may be planted 30 days after application.

USE INSTRUCTIONS: This product may be applied in pastures as a spot treatment or in fields where the herbicide is to be applied to a crop stand as a broadcast application. See additional directions for use with the same crops listed in the "ANNUAL AND PERENNIAL CROPS" section of this label.

APPLICATION: Postemergence Weed Control (Broadcast Application)

though application may be limited to one pass across the area in order to avoid unwanted crop destruction. To the extent consistent with the crop's tolerance and weed control requirements, 2,4-D herbicide can be applied to establish additional stands or to add new species to existing stands.

Dravit® is a non-generic name for the following active ingredients: 1) S-metolachlor; 2) metribuzin; 3) metribuzin-M; and 4) metribuzin-MP. Dravit® is a registered trademark of Bayer CropScience LLC, 2010.

11.4 Pastures

USES OF APPLICATION: Pastures

APPLICATION: Postemergence Weed Control (Broadcast Application)

USE INSTRUCTIONS: This product may be applied for weed control in grass pastures, natural grasslands, or to establish new grassland.

11.3 Grass Seed and Soil Prodaction

USES OF APPLICATION: Grass Seed Production, Forest Conservation, Medicinal Grass Seed Production

APPLICATION: Post-planting, Preemergence, Revitalization, Revitalization, Revitalization

USE INSTRUCTIONS: This product may be applied after planting to establish grass seed production, or to revitalize an existing seed production stand. When used for seed production, this product is to be used to control annual weeds and other undesirable vegetation. Applications may be made preplanting and postplanting for seed production, or to establish a new grassland or establish the existing seed production stand.

11.2 Conservation Reserve Program (CRP)

USES OF APPLICATION: Preplant, Preemergence, Site Preparation, Spot Treatment

APPLICATION: Post-planting, Preemergence, Revitalization

USE INSTRUCTIONS: This product may be applied on annually cropped CRP land. No waiting period is required between application and planting the next crop onto CRP land. No waiting period is required between application and planting the next crop onto CRP land. No waiting period is required between application and planting the next crop onto CRP land. No waiting period is required between application and planting the next crop onto CRP land.

11.1 Roundup Ready Crops

USES OF APPLICATION: Preplant, Preemergence, Site Preparation, Spot Treatment

APPLICATION: Post-planting, Preemergence, Revitalization, Revitalization, Revitalization

USE INSTRUCTIONS: This product may be applied for weed control in Roundup Ready crops before planting, as a preemergence or postemergence herbicide for the control of annual weeds and broadleaf weeds listed. Observe the maximum application rates specified for Roundup Ready crops in the sections that follow.

NOTE: This template can be used for a booklet with the following number of pages: 8, 12, 16, 24, 30, 40, 48, 56, 64, 72, 80, 88, 96.
USE INSTRUCTIONS: This product may be applied before, during or after planting Roundup Ready fields. This product may be applied over the top of Roundup Ready alfalfa (pre-crop) and Roundup Ready canola (in-crop) in newly established and established stands. Roundup Ready Ready canola is defined as those Roundup Ready canola cultivars that are used in early and late transplants for the following growing season.

---

**Ready canola could cause extensive crop injury.** Made to TruFlex Roundup Ready canola onto adjacent fields of Roundup Ready canola. Applications described on this label made over the top of canola. The directions for use provided in this section are specific to and minimum of 60 days between application and harvest of canola grain. No waiting sequential application might be needed to reduce competition with the crop. Works best for control of early emerging annual weeds and winter-emerging weeds, such as.

**USE INSTRUCTIONS:** This product may be applied at rates of between 11 and 4.625 quarts per acre before weeds exceed 4 inches in height (before they become competitive with the crop). Repeat this application before new flushes of weeds will be controlled or suppressed with one or more applications of this product. Many perennial grasses and broadleaf weeds listed on this label. When applied as directed, this product will control annual grasses and broadleaf weeds. For directions for use on SWEET CORN hybrids that contain Roundup Ready 2 Technology, see the "Field Corn Hybrids with Roundup Ready 2 Technology" section of this label for information regarding the use of this product in Roundup Ready crops. See the "ROUNDUP READY CROPS" section of this label for information about application postemergence (in-crop) applications in hybrid canola seed production fields, including Total for all In-crop applications from the plant height is 24 to 30 inches. When corn plants are 30 to 48 inches tall. USE INSTRUCTIONS: Refer to the following table for maximum application rates. SPOT TREATMENT; PREHARVEST; POSTHARVEST; POSTEMERGENCE (IN-CROP) FOR TASSEL HYBRIDS IN ROUNDUP HYBRIDIZATION SYSTEMS.

**RESTRICTIONS:** Maximum quantity of this product that may be applied at postemergence (in-crop) applications postemergence (in-crop) applications in hybrid canola seed production fields, including Total for all In-crop applications from the plant height is 24 to 30 inches. When corn plants are 30 to 48 inches tall. USE INSTRUCTIONS: Refer to the following table for maximum application rates. SPOT TREATMENT; PREHARVEST; POSTHARVEST; POSTEMERGENCE (IN-CROP) FOR TASSEL HYBRIDS IN ROUNDUP HYBRIDIZATION SYSTEMS.

**RESTRICTIONS:** Maximum quantity of this product that may be applied at postemergence (in-crop) applications postemergence (in-crop) applications in hybrid canola seed production fields, including Total for all In-crop applications from the plant height is 24 to 30 inches. When corn plants are 30 to 48 inches tall. USE INSTRUCTIONS: Refer to the following table for maximum application rates. SPOT TREATMENT; PREHARVEST; POSTHARVEST; POSTEMERGENCE (IN-CROP) FOR TASSEL HYBRIDS IN ROUNDUP HYBRIDIZATION SYSTEMS.

**EXISTING USE:** This product may be applied at rates of between 11 and 4.625 quarts per acre before weeds exceed 4 inches in height (before they become competitive with the crop). Repeat this application before new flushes of weeds will be controlled or suppressed with one or more applications of this product. Many perennial grasses and broadleaf weeds listed on this label.

**USE INSTRUCTIONS:** This product may be applied to winter varieties of Roundup Ready canola from emergence to canopy closure in the fall and prior to bolting in the 6-leaf stage or up to 22 fluid ounces after the 6-leaf stage through first-flower. For control. Make the second application after some regrowth has occurred and a yield loss. To maximize yield potential, eliminate competing weeds early.

Preharvest Application Rates.

PRECAUTIONS: Do not apply this product for preharvest weed control to cotton grown for seed. All users are responsible for any and all loss or damage in connection with the preharvest use of this product on Roundup Ready cotton grown for seed.

INSTRUCTIONS: When a minimum of 7 days between application and harvest is required. This product may be applied using precision point directed or hooded sprayers.

USE INSTRUCTIONS: Up to 22 fluid ounces of this product per acre may be applied after 25 percent bloom for annual and perennial weed control prior to harvest.

NOTE: This product will enhance the performance of harvested seeds when applied preharvest to Roundup Ready cotton grown for seed.

NOTE: Check local regulations for the latest restrictions on this and other similar products.

12.1 Roundup Ready Cotton

The directions for use of this product to the cotton are specific to and may only be used with varieties designated as "Roundup Ready Cotton". This product is for use on Roundup Ready Flex cotton. This product is for use on Roundup Ready Flex cotton.

NOTE: This product may be applied from cracking to layby. It may not be used on Roundup Ready Flex cotton.

USE INSTRUCTIONS: Up to 22 fluid ounces of this product per acre may be applied after 25 percent bloom for annual and perennial weed control prior to harvest.

NOTE: This product will enhance the performance of harvested seeds when applied preharvest to Roundup Ready cotton grown for seed.

NOTE: Check local regulations for the latest restrictions on this and other similar products.
This product may be applied before, during or after planting Roundup Ready Flex cotton.

Monosodium acid methanearsonate; Aim; Caparol; Cotoran; Direx; Envoke; Layby-Pro; MSMA; Prowl; Prowl postemergence (in-crop) in Roundup Ready Flex cotton. 

Select; Select MAX; Stalwart; Staple; Warrant; acetochlor; clethodim; do not exceed a maximum of 3 fluid ounces per acre for crops other than cotton. 

TANK MIXTURES: This product may be tank-mixed with the following products and applied prior to crop emergence. 

Ensure that the product used is carefully compatible with the other products and that the tank mixture is used in accordance with the label directions for each product. 

Read and follow label directions for all products in the tank mixture. 

This product may be tank-mixed with 2,4-D, Banvel or Clarity and applied postemergence (in-crop) over the top of Roundup Ready 2 Yield soybean. 

TANK MIXTURES: This product may be tank-mixed with the following products and applied prior to crop emergence. 

Roundup Ready 2 Yield Soybean (spor terminator) 

USES INSTRUCTING: The project may be used to control annual and perennial weeds in Roundup Ready Flex crops. 

IN THE SOUTHERN STATES, A SEQUENTIAL APPLICATION OF THIS PRODUCT WILL BE NEEDED TO CONTROL NEW FLUSHES OF WEEDS IN THE ROUNDUP READY FLEX COTTON. 

Acceptable: The combined total application of this product from crop planting to harvest (not to exceed 5.3 quarts per acre) is acceptable. The total application rate is acceptable. 

Rest-of-season: Combined total application of this product from crop planting to harvest (not to exceed 5.3 quarts per acre) is unacceptable. The total application rate is acceptable. 

Rest-of-season: Combined total application of this product from crop planting to harvest (not to exceed 5.3 quarts per acre) is unacceptable. The total application rate is unacceptable. 

WILL BE NEEDED TO CONTROL NEW FLUSHES OF WEEDS IN THE ROUNDUP READY FLEX COTTON. 

Maximum Preharvest application rate 22 fluid ounces per acre 

TANK MIXTURES: This product may be tank-mixed with the following products and applied prior to crop emergence. 

Maximum Preharvest application rate 22 fluid ounces per acre when the weed is 8 to 12 inches tall to increase control and possibly avoid the need for a sequential application. 

When using growth regulators, including glyphosate, tank mix may be tank-mixed with the following products: 

Apply up to 22 fluid ounces of this product per acre when the weed is 4 to 8 inches tall to increase control and possibly avoid the need for a sequential application. 

When using growth regulators, including glyphosate, tank mix may be tank-mixed with the following products: 

Check the "ROUNDUP READY CROPS" section of this label for information on Maximum Preharvest application rate. 

Select; Select MAX; Stalwart; Staple; Warrant; acetochlor; clethodim; imazaquin; imazethapyr; lactofen; linuron; metolachlor; trifluralin. 

Do not exceed a maximum of 6 fluid ounces per acre for crops other than cotton. 

This product may be tank-mixed with 2,4-D, Banvel or Clarity and applied postemergence (in-crop) over the top of Roundup Ready Flex cotton. 

TANK MIXTURES: This product may be tank-mixed with the following products and applied prior to crop emergence. 

This product may be applied before, during or after planting Roundup Ready Flex cotton.

acre)

Handheld

Sprayer

Apply when most plants have reached the late-bud to flower stage of growth.

Apply when most target plants have reached the late-bud to flower stage of development.

Applying this product as a broadcast application will provide control of most grasses and broadleaf weeds in pastures, sod fields or non-crop areas. Applications should be made when the target weeds are at or beyond the 5-leaf stage. Subsequent applications will be necessary for long-term control. After harvest, mowing or tillage in late-summer or fall, allow a minimum of 4 weeks before application. For suppression, apply 1 fluid ounce of this product at 1 fluid ounce in 5 to 10 gallons of water per acre. Unless otherwise directed, make broadcast applications in 3 to 40 gallons of water per acre. Ensure thorough coverage when using handheld sprayers. Do not spray over turf that is actively growing and in full bloom. Application before or fall when plants are actively growing and in full bloom. Avoid spraying adjacent to untreated or non-target vegetation (which can prevent good spray coverage) and uneven stages of growth and the dense nature of this vegetation preventing good

Fescue, tall

Apply when most plants have reached the late-bud to flower stage of growth.

Apply when most target plants have reached the late-bud to flower stage of development.

Lespedeza

Poison hemlock

1 2 – 3.3 3 – 20 1.5%

For partial control, apply when most target plants are at or beyond the boot to head stage of growth or in the fall prior to frost. Do not tank-mix with residual herbicides when applying 22 fluid ounces of this product as a broadcast application.

For partial control of existing nutsedge, apply 11 to 44 fluid ounces of this product in 3 to 40 gallons of water per acre when plants have 3 to 5 leaves or are at the 5-leaf stage. Subsequent applications will be necessary for long-term control. After harvest, mowing or tillage in late-summer or fall, allow a minimum of 4 weeks before application. For suppression, apply 1 fluid ounce of this product at 1 fluid ounce in 5 to 10 gallons of water per acre. Unless otherwise directed, make broadcast applications in 3 to 40 gallons of water per acre. Ensure thorough coverage when using handheld sprayers. Do not spray over turf that is actively growing and in full bloom. Application before or fall when plants are actively growing and in full bloom. Avoid spraying adjacent to untreated or non-target vegetation (which can prevent good spray coverage) and uneven stages of growth and the dense nature of this vegetation preventing good

Para grass

1 2 – 3.3 3 – 20 1.5%

Use caution when applying this product to the 2- to 3-foot tall grasses in the flatwoods region of Florida, 64 fluid ounces per acre is needed for control.

Fescue, (except tall)

1 2 – 3.3 3 – 40 1.5%

Spurge, leafy

1 2 – 3.3 3 – 20 1.5%

Eliminate weeds to re-grow to a mature stage prior to application of this product after crop emergence.

Apply when most target plants are at or beyond the late-bud to flower stage of development.

Apply when most target plants have reached the late-bud to flower stage of growth.

For control, apply 11 fluid ounces of this product plus 0.5 pound of 2,4-D, made up to 1 fluid ounce in 5 to 10 gallons of water per acre. Repeat this application, as needed, to control weeds that have emerged after the beginning of active growth and rosette development prior to application of this product after crop emergence.

For complete control, apply 22 fluid ounces of this product with a combination of 11 fluid ounces of this product plus 0.5 pound of 2,4-D in 3 to 5 gallons of water per acre. Delay second applications by at least 6 weeks. Repeat this application, as needed, to control weeds that have emerged after the beginning of active growth and rosette development prior to application of this product after crop emergence.

Napiergrass

2 3 – 40 1.5%

In pastures, sod fields or non-crop areas where deep tillage will not follow moldboard plow for enhanced results.

Quackgrass

0.7 – 1.5 3 – 40 1.5%

Pokeweed, common

1 2 – 3.3 3 – 40 1.5%

Also for control, apply 11 fluid ounces of this product, plus 0.5 pound of 2,4-D, made up to 1 fluid ounce in 5 to 10 gallons of water per acre. Repeat this application, as needed, to control weeds that have emerged after the beginning of active growth and rosette development prior to application of this product after crop emergence.

Handheld

Sprayer

Apply this product using a handheld sprayer with a spray-to-wet technique. For application to fully expanded fronds that are at least 18 inches long.

Fescue

1 2 – 3.3 3 – 40 1.5%

Poison grass

3 3 – 40 1.5%

For partial control in pasture or hay crop renovation, apply 22 to 32 fluid ounces of this product in 3 to 40 gallons of water per acre. Allow weeds to re-grow to a mature stage prior to application of this product after crop emergence.

Potato, common

3 3 – 40 1.5%

Lespedeza

0.4 – 2 3 – 40 1 - 1.5%
For control of eucalyptus re-sprouts, apply when re-sprouts are 6 to 12 inches tall. Apply a 0.7-percent solution of this product after berries have set or dropped in late-fall. This application to or contact with desirable vegetation, crop injury or failure of the crop may result from conditions beyond the control of this Company, including, but not limited to, the rate of application being less than or greater than the recommended rate, the weather conditions at the time of application, variation in weed biotypes or plant density, improper mixing or dilution, or improper techniques of spraying when applications are made to crops currently or recently planted. A side-by-side test within the field may be conducted to determine if the product is effective at the recommended rate. Apply spray on days when air temperatures are below 50°F. Ammonia volatilization may be reduced when applications made in the late morning or early afternoon. Apply this product to control weed biotypes which develop resistance to glyphosate, or other residual broadleaf herbicides, and therefore are not susceptible to this product. This product may be applied to or contact with desirable vegetation which is not susceptible to this product. This product is not effective on the control of certain plant species which are tolerant to glyphosate. This product is not intended for over-the-top use on Roundup Ready crops. For in-crop (over-the-top) uses on Roundup Ready crops, crop safety and weed control performance are not warranted by Monsanto when this product is used in accordance with the Complete Directions for Use label ("Directions") and the directions on the label of the product. This Company does not warrant any product reformulated or repackaged by another person. Monsanto Technology LLC. warrants that this product contains the stated ingredients. When using any glyphosate product, wear long-sleeved shirts and pants, gloves, and eye protection. In case of an emergency involving this product, call collect; day or night: 213-493-4999.
NOTE: This template can be used for a booklet with the following number of pages: 8, 12, 16, 24, 32, 40, 48, 56, 64, 72, 80, 88, 96.
