PRECAUTIONARY STATEMENTS
HAZARDS TO HUMANS AND DOMESTIC ANIMALS
CAUTION: Harmful if swallowed or absorbed through skin. Causes moderate eye irritation. Avoid contact with eyes, skin or clothing. Prolonged or frequently repeated skin contact may cause allergic reaction in sensitive individuals. Wash thoroughly with soap and water after handling. Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet. Not for use on puppies less than 12 weeks of age. Consult a veterinarian before using this product on pregnant, bitches with Nursing, or Medicated animals. Sensitivity may occur after using any pesticide product on pets. If signs of sensitivity occur bathe your pet with mild soap and rinse with large amounts of water. If signs continue consult a veterinarian immediately. Do not use the product on animals simultaneously or within 30 days before or after treatment with or exposure to chloroesterase inhibiting drugs, pesticides or chemicals. However, flea and tick collars may be immediately replaced. First aid - Contains an organophosphate that inhibits cholinesterase. If swallowed, call a Poison Control Center or doctor immediately for treatment advice. Have person sip a glass of water if able to swallow. Do not induce vomiting unless told to do so by a Poison Control Center or doctor. Do not give anything by mouth to an unconscious person. If skin or clothing is contaminated, blue dry cloth immediately with plenty of water for 15-30 minutes. Call a Poison Control Center or doctor or treatment advice. If in eyes: Hold eye open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if worn, after first 5 minutes, then continue rinsing eye. Call a Poison Control Center or doctor for treatment advice. Have the product container or label with you when calling a Poison Control Center or doctor or going for treatment.

Note to Physicians and Veterinary: This product contains an organophosphate and may cause chloroesterase inhibition. Chloroesterase inhibition may include salivation, mioisis, incoordination, muscle fasciculation and weakness, vomiting and diarrhea. Atropine is administered only if symptoms of chloroesterase inhibition are present. 2-PAM may be effective as an adjunct to atropine. Call 1-800-375-1414 or your local Poison Control Center for further information.
