IN CASE OF A MEDICAL EMERGENCY INVOLVING THIS PRODUCT,
CALL TOLL FREE, DAY OR NIGHT 1-866-303-6950

FIRST AID

This product is an organophosphate and is a cholinesterase inhibitor.

IF SWALLOWED:

• Call a poison control center or doctor immediately for treatment advice.
• Have person sip a glass of water if able to swallow.
• Do not induce vomiting unless told to by a poison control center or doctor.
• Do not give anything by mouth to an unconscious person.

IF INHALED:

• Move person to fresh air.
• If person is not breathing, call 911 or ambulance, then give artificial respiration, preferably by mouth-to-mouth, if possible.
• Call a poison control center or doctor for further treatment advice.

IF ON SKIN OR CLOTHING:

• Take off contaminated clothing.
• Rinse skin immediately with plenty of water for 15-20 minutes.
• Call a poison control center or doctor for treatment advice.

IF IN EYES:

• Hold eye open and rinse slowly and gently with water for 15-20 minutes.
• Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.
• Call a poison control center or doctor for further treatment advice.

Have the product container or label with you when calling a poison control center or doctor, or going for treatment. You may also contact 1-866-303-6950 for emergency medical treatment information.

NOTE TO PHYSICIAN: This product is a cholinesterase inhibitor. Treat symptomatically. Atropine is antidotal.

Net contents: (55 gallons) (260 gallons)

PRECAUTIONARY STATEMENTS

HAZARDS TO HUMANS AND DOMESTIC ANIMALS

Harmful if inhaled. Harmful if absorbed through skin. Harmful if ingested. Avoid contact with eyes, skin, or clothing. Avoid breathing spray mist. Prolonged, or frequently repeated, skin contact may cause allergic reactions in some individuals.

PERSONAL PROTECTIVE EQUIPMENT

Some materials that are chemical-resistant to this product are barrier lambskins, butyl rubber, nitrile rubber, and vinyl. If you want more options, follow the instructions for category F in the EPA chemical-resistance category chart.

All applicators, flaggers, and other handlers must wear:

- long-sleeved shirt and long pants
- work boots
- chemical-resistant gloves
- chemical-resistant apron

Follow manufacturer’s instructions for cleaning/washing PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry. Discard clothing and other absorbent materials that have been drenched or heavily contaminated with this product’s concentrates. Do not rewear them.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application.

Agricultural Use Requirements:

Use this product only according to its labeling and with the Worker Protection Standard 40 CFR Part 170. This standard contains requirements for the protection of agricultural workers on farms, ranches, and nurseries, and handlers of agricultural pesticides. It contains requirements for training, decontamination, certification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and drift-entrainment related. The requirements in this box only apply to uses of the product that are covered by the Worker Protection Standard.

Do not enter or allow anyone to enter treated areas during the restricted entry interval (REI). The REI for each crop is listed in the directions for use associated with each crop. PPE required for entry to treated areas that is permitted under the Worker Protection Standard and that involve contact with anything that has been treated, such as plants, soil, and, or water, is:

- Coveralls
- Chemical-resistant gloves made out of any water-proof material
- Shoes plus socks.

USER SAFETY REQUIREMENTS:

User should:

- Wash hands before eating, drinking, chewing gum, using tobacco, or using the toilet.
- Remove clothing/PPE immediately if pesticide gets inside. Wash thoroughly and put on clean clothing.

ENGINEERING CONTROLS STATEMENTS:

PPE must use an enclosed cockpit in a manner that is consistent with the WPS for Agricultural Pesticides [40 CFR 170.24(b)(6)]. PPE must wear the PPE required on this labeling for applications.

ENVIRONMENTAL HAZARDS:

This product is toxic to birds at all stages of development, including chicks and nestlings. This product is toxic to aquatic organisms, including fish and invertebrates.

STORAGE AND DISPOSAL

Do not contaminate water, food, or feed by storage and disposal.

PRECAUTIONS FOR USE:

Pilots using a ULV aircraft should follow the original unopened container in a secure, dry place. Do not contaminate with other pesticides or herbicides. Pylex ULV AG should be stored above 0°C (32°F) and should not be stored for long periods of time at a temperature in excess of 35°C (95°F).

STORAGE DISarlo:

To avoid wastes, use all material in this container by application according to label directions. If wastes cannot be avoided, after remaining product is a waste disposal facility or pesticide disposal program (often such programs are run by state or local government or by industry).

CONTAINER DISposal:

Refillable container: Refill this container with pesticide only. Do not reuse this container for any other purpose. Cleaning the container before final disposal is the responsibility of the person disposing of the container. Cleaning is defined as making the container unsuitable for use by the refiller. To clean this container before final disposal, empty the remaining contents from this container into application equipment or mix tank. Fill the container about 30 percent full with water. Agitate vigorously or recirculate water with the pump for 2 minutes. Pour or pump remaining into application equipment or rinse collection system. Repeat this procedure two more times.

Nonrefillable containers (except for those less than 5 gallons): Nonrefillable container. Do not reuse or refill this container. Offer for recycling if available. Triple rinse container (or equivalent) promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or mix tank and drain for 30 seconds after the flow begins to drip. Fill the container ¾ full with water and recap. Shake for 10 seconds. Pour rinse recovery equipment or rinse out in a mixing tank or store rinsate for later use or disposal. Repeat this procedure two more times.

Nonrefillable containers (greater than 5 gallons): Nonrefillable container. Do not reuse or refill this container. Offer for recycling if available, Triple rinse or equivalent promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or mix tank. Fill the container ¾ full with water. Agitate and agitation equipment. Trip rinse rinse equipment. Refill rinse equipment or rinse out in a mixing tank. Repeat this procedure two more times.

Do not discharge effluent containing this product into streams, ponds, estuaries, or waterways unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge. Do not drain effluent containing this product in sewer systems without previously notifying the local sewage treatment plant authority. Fire guard against State Water Board or Regional Office of the EPA.

PHYSICAL OR CHEMICAL HAZARD:

Do not use or store near heat or open flame.

DIRECTIONS FOR USE:

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. For any requirements specific to your State or tribe, consult the agency responsible for pesticide regulation.

PRECAUTIONS AND RESTRICTIONS:

All ULV aerosol formulations other than those intended for use in a Whole Area Mosquito Adulticide must be packaged in closed mixing and loading systems.

Do not use this product for any uses other than those specified on this label.

Utilized spray droplets of Pylex ULV AG will permanently damage certain plant. Crops should not be sprayed. If accidental exposure does occur, the user should be washed immediately.

Buffer Zones for Grazed-based Applications:

When making a ULV application with ground-based application equipment, a minimum buffer zone of 20 feet must be maintained along any water body.

Spray Drift Requirements:

Observe the following requirements when spraying in the vicinity of aquatic areas such as, but not limited to lakes, reservoirs, rivers, permanent streams, marshes or natural ponds; estuaries and commercial fish ponds.

Droplet Size:

Use the largest droplet size consistent with acceptable efficacy. Formation of very small droplets may be minimized by appropriate nozzle selection, by orienting nozzles away from the air stream as much as possible, and by avoiding excessive spray boom pressure.

PAGE 2

59637_FyfanonULV_specimen 8/12 8:49 AM Page 2
Use only medium or coarse spray nozzles according to ASAE (S572) definition for standard nozzles, or a volume mean diameter (VMD) of 300 microns or greater for spinning atomizer nozzles. In conditions of low humidity and high temperatures, applicators should use a coarser droplet size.

**Additional Requirements for Aerial Applications**

For aerial applications, the spray boom should be mounted on the aircraft as to minimize drift caused by wingtip or rotor vortices. The minimum practical boom length should be used and must not exceed 75% of rotor diameter. Aerial applicators must consider flight speed and nozzle orientation in determining droplet size. When applications are made with a cross-wind, the swath will be displaced downwind. The applicator must compensate for the displacement of the downwind edge of the application area by adjusting the path of the aircraft upward. Before beginning treatment, notify all registered beekeepers in or near the treatment area of the date and approximate time of spraying.

**Do not use this product for any uses other than those specified on this label.**

**Do not make aerial or ground applications into areas of temperature inversions. Inversions are characterized by stable air and increasing temperatures with increasing distance above the ground. Most fog or fog may indicate the presence of an inversion in humid areas.** Where permissible by local regulations, the applicator must detect the presence of an inversion by producing smoke and observing the smoke layer near the ground surface. In conditions of low humidity and high temperatures, applicators should use a coarser droplet size.

**Additional Requirements for Ground Applications**

Spray should be released at the lowest height consistent with pest control and flight safety. Applications more than 10 feet above the crop canopy should be avoided. For ground applications, apply with wind speed no more than 4 feet above the ground or crop canopy. For aerial applications, keep off unbroken planting rows at least 30 feet wide and when spraying the outer rows. In transitions spray rows over the top in a windrow or windrow and windrow pattern. Do not apply as a windrow in any steeper than a 10% slope.

**Temperature Inversion**

Temperature inversions are characterized by stable air and increasing temperatures with increasing distance above the ground. Inversions are often associated with fog, mist, or low clouds. Inversion layers may extend several hundred feet above the ground, and may be difficult to detect. Applicators should monitor the weather and avoid spraying in conditions of low humidity and high temperatures, or when the air temperature at 30 feet above the ground is greater than 10° higher than the temperature of the ground surface.

Do not spray in areas where temperatures are below freezing. Avoid spraying in conditions of low humidity and high temperatures, or when the air temperature at 30 feet above the ground is greater than 10° higher than the temperature of the ground surface.

**Wind Direction and Speed**

Wind speed and direction are important factors in determining spray drift. For maximum coverage and efficiency, the spray should be directed into the canopy. In conditions of low humidity and high temperatures, applicators should use a coarser droplet size. Aerial applicators should consider flight speed and nozzle orientation in determining droplet size. When applications are made with a cross-wind, the swath will be displaced downwind. The applicator must compensate for the displacement of the downwind edge of the application area by adjusting the path of the aircraft downward.

**Do not use this product for any uses other than those specified on this label.**

**PRECAUTIONS AND RESTRICTIONS FOR APPLICATION TO COTTON TO CONTROL BOLL WEEVIL**

Treatment supervisors and applicators must be aware of all sensitive areas near cotton fields, including: schools, hospitals, nurseries, churches, occupied developments, parks, recreation areas, bodies of water, and potential habitats for threatened and endangered species.

For aerial applications, spray equipment must be adjusted so that the volume median diameter is 100 microns (Dv 0.5 = 100um) or greater. The effects of drift speed, nozzle angle, and pump pressure on the droplet size spectrum must be considered.

For ground applications, the spray boom should be mounted on the aircraft to minimize drift caused by wingtip or rotor vortices. The minimum practical boom length should be used and the nozzle spacing must be considered.

Spray equipment must be adjusted so that the spray boom is not placed beyond 75% of the wingspan or rotor diameter.

Global positioning systems (GPS) should be used to guide pilots and to monitor each application.

Spray should be released at the lowest height consistent with pest control and flight safety. Applications more than 10 feet above the crop canopy should be avoided.

For aerial applications, spray equipment must be adjusted so that the volume median diameter is 100 microns (Dv 0.5 = 100um) or greater. The effects of flight speed, nozzle angle, and pump pressure on the droplet size spectrum must be considered.

A tank mix of these may be prepared as follows: mix a small amount in a glass Jar to verify that the products are physically compatible. Label rates must not be exceeded. This product may not be mixed with any product bearing a label which specifies prohibits such mixing. Prior to tank mixing large quantities, mix a small amount in a glass Jar to verify that the products are physically compatible.

Fyfanon ULV AG can be mixed with a synergized pyrethrin emulsifiable concentrate (6% pyrethrin + 60% PBO) in accordance with the most restrictive of label limitations and precautions indicated on both this and the tank-mixed product. Label rates must not be exceeded. This product may not be mixed with any product bearing a label which specifically prohibits such mixing. Prior to tank mixing large quantities, mix a small amount in a glass Jar to verify that the products are physically compatible.

This product may not be mixed with any product bearing a label which specifically prohibits such mixing. Prior to tank mixing large quantities, mix a small amount in a glass Jar to verify that the products are physically compatible.

**NOTE FOR AQUATIC USES (rice):**

Broadcast use only over intermittently flooded areas. Application may not be made immediately in or around bodies of water where fish or shellfish are grown and/or harvested.

**USDA Rate Specifications on Cotton for Boll Weevil Eradication Program For Use Only Under the US Boll Weevil Eradication Program**

*Use highest rate for very heavy migrating population.*

For use on cotton, Fyfanon ULV can be used alone on a Fyfanon ULV concentrate spray or diluted in once-refined cottonseed or vegetable oil sufficient to make at least one quart of finished spray per acre. Spray rates are known to develop resistance to products used repeatedly for control. Because the development of resistance cannot be predicted, the use of this product should conform to resistance management strategies established for the use area. Consult your local or State agricultural authorities for details.

Ground equipment should be used to treat field edges when possible, covering areas that cannot be treated effectively with aircraft because of obstructions which may affect applicator safety, or where there is adjacent sensitive areas.

Do not apply when wind velocity exceeds 10 mph. Treatments should be applied when winds are calm, or moving away from adjacent sensitive areas.

When applications are made with a cross-wind, the swath will be displaced downwind. The applicator must compensate for this displacement at the downwind edge of the application area by adjusting the path of the aircraft upward.

Do not make aerial or ground applications into temperature inversions. Inversions are characterized by stable air and increasing temperatures with height above the ground. Mist or fog may indicate the presence of an inversion in humid areas. The applicator may detect the presence of an inversion by producing smoke and observing a smoke layer near the ground surface.

Applications will not be made when people are in or near infested cotton fields or, to the degree possible, when people are present in or near adjacent sensitive areas.

Application will not be made when rainfall is imminent.

Cheminova does not recommend that application be made to wet foliage.

Before beginning treatment, program personnel shall notify all registered apiarists in or near the treatment area of the date and approximate time of treatment.

WARRANTY DISCLAIMER

Cheminova warrants that this product conforms to the chemical description on the label and is reasonably fit for the purposes stated on the label when used in strict accordance with the directions, subject to the inherent risks set forth below. TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, CHEMINOVA MAKES NO OTHER EXPRESS OR IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR ANY OTHER EXPRESS OR IMPLIED WARRANTY.

INHERENT RISKS OF USE

It is impossible to eliminate all risks associated with use of this product. Crop injury, lack of performance, or other unintended consequences may result because of such factors as use of the product contrary to label instructions (including conditions noted on the label, such as unfavorable temperatures, soil conditions, etc.), abnormal conditions (such as excessive rainfall, drought, leaching, hurricanes), presence of other materials, the manner of application, or other factors, all of which are beyond the control of Cheminova or the Seller. All such risks shall be assumed by Buyer and User. Buyer and User agree to hold Cheminova and the Seller harmless for any claims related to such factors.

LIMITATION OF REMEDIES

To the extent consistent with applicable law, Cheminova shall not be liable for consequential, incidental, or special damages or losses in any matter. The terms of the Warranty Disclaimer above and this Limitation of Remedies cannot be varied by any written or verbal statements or agreements. No employee or sales agent of Cheminova or the Seller is authorized to vary or exceed the terms of the Warranty Disclaimer or this Limitation of Remedies in any manner.
