Metrizubin 4L is a flowable herbicide for control of certain grasses and broadleaf weeds on alfalfa, asparagus, barley (spring and winter), carrots, field corn, garbanzo beans (chick peas), lentils, peas, potatoes, safflower, soybeans, sugarcane, tomatoes, winter wheat.

**ACTIVE INGREDIENT:**
Metrizubin: 4-Amino-6-(1,1-dimethylethyl)-3-(methylthio)-1,2,4-triazin-5(4H)-one ........................................ 41%
Inert ingredients: .............................................. 59%
**TOTAL** .......................................................... 100%

Contains 4 lbs. of metrizubin per gallon.

**USER SAFETY RECOMMENDATIONS**
User should:
- Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet.
- Remove clothing immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
- Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

Do not contaminate feed or food. Keep out of reach of children. Obtain prompt medical aid if poisoning should occur.

**ENVIRONMENTAL HAZARDS**
Do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. Do not contaminate water when disposing of equipment washwaters.

**GROUND WATER ADVISORY:** Metrizubin is a chemical which can travel (seep or leak) through soil and can contaminate ground water which may be used as drinking water. Metrizubin has been found in ground water as a result of agricultural use. Use of the material not to be wasted into any water body that is surface (open water) is close to the surface, and where the soils are very permeable, i.e., well drained soils such as loamy sands. Your local agricultural agencies can provide further information on the type of soil in your area and the location of ground water.

**DIRECTIONS FOR USE**
It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Do not apply this product in a manner that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

**AGRICULTURAL USE REQUIREMENTS**
Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard. Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 12 hours. Exception: If the product is soil injected or soil incorporated, the Worker Protection Standard, under certain circumstances, allows workers to enter the treated area if there will be no contact with anything that has been treated. PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water, is: Coveralls, waterproof gloves, and shoes plus socks.

**STORAGE AND DISPOSAL**
Do not contaminate water, food or feed by storage or disposal.

**PESTICIDE STORAGE:** Store in a cool, dry place and in such a manner as to prevent cross contamination with other pesticides, fertilizers, food, and feed. Store in original container and out of the reach of children, preferably in a locked storage area.

Handle and open container in a manner as to prevent spillage. If the container is leaking or material spilled for any reason or cause, carefully sweep material into a pile. Refer to Precautionary Statements on label for hazards associated with the movement of this material. Do not waste material into any water body that is surface (open water) is close to the surface, and where the soils are very permeable, i.e., well drained soils such as loamy sands. Your local agricultural agencies can provide further information on the type of soil in your area and the location of ground water.

**PESTICIDE DISPOSAL:** Wastes resulting from the use of this product may be disposed of on site or at an approved waste disposal facility.

**CONTAINER DISPOSAL:** Triple rinse (or equivalent) then offer for recycling or reconditioning, or puncture and dispose of in a sanitary landfill, or incineration, or if approved by state and local authorities, by burning. If burned, stay out of smoke.
METRIBUZIN 4L
EPA REG. NO. 34704-990

GENERAL INFORMATION
Metribuzin 4L cannot be applied with low pressure or high volume hand wand equipment.

MIXING
When using Metribuzin 4L, make sure the sprayer is completely clean, free of rust or corrosion which occurs from Winter storage. Examine strainers and screens to be sure the sprayer is clean from previously used pesticides.

Any tank mix containing Metribuzin 4L should be kept agitated and sprayed out immediately. Do not allow tank mixes to stand for prolonged periods of time.

The proper mixing procedure for Metribuzin 4L alone or in tank mix combinations with other herbicides is:

1. Fill the spray tank 1/4 to 1/3 full with clean water.
2. Add specified rate of Metribuzin 4L while recirculating and with agitator running.
3. Follow the triple rinse procedure described under STORAGE AND DISPOSAL to insure that all product is removed from the container.
4. Mix thoroughly and add clean water to fill spray tank to desired level.
5. Add the other herbicide to tank last and agitate thoroughly.
6. Continue agitation during application and until sprayer tank is empty.

SOIL TEXTURE: As used on this label, "Coarse soils" are loamy sand or sandy loam soils. "Medium soils" are loam, silt loam, silty, sandy clay, or sandy clay loam. "Fine soils" are silt clay, silty clay loam, clay, or clay loam. Silty clay loam soils are transitional soils and may be classified as medium textured soils in some regions of the U.S.

GENERAL PRECAUTIONS AND RESTRICTIONS

- Do not use on other crops grown for food or forage. Apply this product only as specified on this label. Do not rotate any crop not listed on this label for 18 months following application of Metribuzin 4L.
- Do not allow sprays to drift on to adjacent desirable plants.
- Observe all cautions and limitations on labeling of all products used in mixtures.
- For all uses: Low pressure and high volume hand wand equipment is prohibited.

CHEMIGATION
Metribuzin 4L is recommended for application through sprinkler irrigation equipment to potatoes, soybeans, tomatoes, and asparagus as directed on this label. Refer to the crop sections of this label for rates, weeds controlled or suppressed, restrictions, and special precautions.

Apply this product only through sprinkler (excluding center pivot, lateral move, or solid set) irrigation systems. Do not apply this product through any other type of irrigation system.

Crop injury, lack of effectiveness, or illegal pesticide residues in the crop can result from nonuniform distribution of treated water.

Calibration: (Center Pivot and Self-Propelled Lateral Move Systems):
Sprinkler irrigation systems must be accurately calibrated for application of Metribuzin 4L. Greater accuracy in calibration (and distribution) will be achieved by injecting a larger volume of a more dilute mixture of product and water per hour. Follow the steps below to calibrate center pivot and lateral move systems:
1. Determine number of minutes required to make one complete revolution while applying 1/4 to 3/4 inch of water per acre.
2. With the system at operating pressure determine the exact number of minutes required to inject one gallon of water.
3. Divide the time required for one revolution (step 1) by the time required to inject one gallon (step 2). This gives total gallons of product-water mixture to be added to nurse tank.
4. Add required amount of water to nurse tank and start the agitation system. Then add sufficient Metribuzin 4L at the specified rate (See BROADCAST APPLICATION INSTRUCTIONS) to the nurse tank.

EXAMPLE: If 20 hours (1200 minutes) were required for one revolution and if 2 minutes were required to inject one gallon, then a total of 600 gallons of product-water mixture are required (1200 / 2 = 600) to treat 135 acres at 1 pint/core, 135 pins (16 gallons and 7 pints) of Metribuzin 4L are required.

If you have questions about calibration, you should contact State Extension Service Specialists, equipment manufacturers or other experts.

Do not connect an irrigation system (including greenhouse systems) used for pesticide application to a public water system unless the pesticide label-prescribed safety devices for public water systems are in place.

A person knowledgeable of the chemigation system and responsible for its operation, or under the supervision of the responsible person, shall shut the system down and make necessary adjustments should the need arise.

The system must contain a functional check valve, vacuum relief valve, and low pressure drain appropriately located on the irrigation pipeline to prevent water source contamination from backflow.

The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.

The pesticide injection pipeline must also contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops.

The irrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.

Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock. Do not apply when wind speed favors drift beyond the area intended for treatment. Maintain continuous agitation in the injection nurse tanks during the herbicide application, sufficient to keep herbicide in suspension.

Apply specified dosage in 1/4 to 3/4 inch of water (1/4 to 1/2 inch of water on sandy soils) per acre as a continuous injection in center pivot and lateral move systems or in the last 15 to 30 minutes of set in permanent solid set sprinkler systems. Application of more than the quantity of irrigation water recommended on this label may result in decreased product performance by removing the chemical from the zone of effectiveness. Where sprinkler distribution patterns do not overlap sufficiently unacceptable weed control may result. Where sprinkler distribution patterns overlap excessively crop injury may result. Allow sufficient time for pesticide to be flushed through all lines and all nozzles before turning off irrigation water. To insure that lines are flushed and free of remaining pesticide, an indicator dye may be injected into the lines to mark the end of the application period.

Use a minimum of 1 part water to 1 part herbicide for injection. The use of a larger volume of water will insure greater accuracy and more uniform distribution.

AERIAL DRIFT REDUCTION ADVISORY INFORMATION
Avoiding spray drift at the application site is the responsibility of the applicator. The interaction of every machine and weather related factors determine the potential for spray drift. The applicator and the grower are responsible for considering all these factors when making decisions.

The following drift management requirements must be followed to avoid off target deposition from aerial applications to agricultural field crops. These requirements do not apply to forestry applications, public health uses or to applications using dry formulations.

1. The distance of the outer most nozzles on the boom must not exceed 3/4 the length of the wingspan or rotor.
2.Nozzles must always point backward with the air stream and never be pointed downwards more than 45 degrees.

3. Where states have more stringent regulations, they should be observed.

4. The applicator should be familiar with and take into account the information covered in the Aerial Drift Reduction Advisory Information.

INFORMATION ON DROPLET SIZE: The most effective way to reduce drift potential is to apply large droplets. The best drift management strategy is to apply the largest droplets that provide sufficient coverage and control. Applying larger droplets reduces drift potential, but will not prevent drift if applications are made improperly, or under unfavorable environmental conditions (see Wind, Temperature and Humidity, and Temperature Inversions).

CONTROLLING DROPLET SIZE:

• Volume - Use high flow rate nozzles to apply the highest practical spray volume.

• Nozzle size - use nozzles with higher rated flow rates to produce larger droplets.

• Pressure - Do not exceed the nozzle manufacturer's recommended pressures. For many nozzle types lower pressure produces larger droplets. When higher flow rates are needed, use higher flow rate nozzles instead of increasing pressure.

• Number of nozzles - Use the minimum number of nozzles that provide uniform coverage.

• Nozzle Orientation - Orienting nozzles so that the spray is released parallel to the airstream produces larger droplets than other orientations and is the recommended practice. Significant deflection from horizontal will reduce droplet size and increase drift potential.

• Nozzle Type - use a nozzle type that is designed for the intended application. With most nozzle types, narrower spray angles produce larger droplets. Consider using low-drift nozzles. Solid stream nozzles oriented straight back produce the largest droplets and the lowest drift.

BOOM LENGTH: For some use patterns, reducing the effective boom length to less than 3/4 of the wingspan or rotor length may further reduce drift without reducing swath width.

APPLICATION HEIGHT: Applications should not be made at a height greater than 10 feet above the top of the largest plant unless a greater height is required for aircraft safety. Making applications at the lowest height that is safe reduces exposure of droplets to evaporation and wind.

SWATH ADJUSTMENT: When applications are made with a crosswind, the swath will be displaced downwind. Therefore, on the up and downwind edges of the field, the applicator must compensate for this displacement by adjusting the path of the aircraft upward. Swath adjustment distance should increase, with increasing drift potential (higher wind, smaller droplets, etc).
METRIBUZIN 4L
EPA REG. NO. 34704-990

WIND: Drift potential is lowest between wind speeds of 2 to 10 mph. However,
multiple factors, including droplet size and equipment type determine drift potential at
any given speed. Application should be avoided below 2 mph due to variable wind
direction and high drift potential. NOTE: Local terrain can influence wind pat-
tterns. Every applicator should be familiar with local wind patterns and how they
affect spray drift.

TEMPERATURE AND HUMIDITY: When making applications in low relative
humidity, set up equipment to produce larger droplets to compensate for evaporation.
Droplet evaporation is most severe when conditions are both hot and dry.

TEMPERATURE INVERSIONS: Applications should not occur during a tempera-
ture inversion because drift potential is high. Temperature inversions restrict verti-
cal air mixing, which causes small suspended droplets to remain in a concentrated
cloud near the ground. This can move in unpredictable directions due to the light variable
winds common during inversions. Temperature inversions are characterized by
increasing temperatures with altitude and are common on nights with limited cloud
cover and light to no wind. They begin to form as the sun sets and often continue
into the morning. Their presence can be indicated by ground fog; however, if fog is
not present, inversions can also be identified by the movement of smoke from a
ground source or an aircraft smoke generator. Smoke that layers and moves later-
ally in a concentrated cloud (under low wind conditions) indicates an inversion, while
smoke that moves upward and rapidly dissolves indicates good vertical air mixing.

SENSITIVE AREAS: Metribuzin 4L should only be applied when the potential for
drift to adjacent sensitive areas (e.g. residential areas, bodies of water, known habi-
tat for threatened or endangered species, non-target crops) is minimal (e.g. when
wind is blowing away from the sensitive areas).

APPLICATION OF METRIBUZIN 4L WITH HERBICIDE SPRAY EQUIPMENT
Use a standard low pressure (20 to 40 psi) herbicide boom sprayer equipped with
suitable nozzle types and screens no finer than 50-mesh in-nozzles and in-line strainers.
Agitate thoroughly before and during application with bypass agitation.

GROUND APPLICATION: Apply the proper rate of Metribuzin 4L in a minimum of
10 to 40 gallons of spray mixture per acre broadcast.

Banded Application: Use proportionally less Metribuzin 4L per acre in a band
versus a broadcast application. For band application use 1/4 to 1 gallon of spray
mix per inch of band width regardless of row spacing.

EXAMPLES: (1) To treat a 15-inch band on rows 30 inches apart, use one-half of
the broadcast rate of Metribuzin 4L. (2) To treat a 14-inch band on rows 42 inches
apart, use one-third of the broadcast rate of Metribuzin 4L.

AERIAL APPLICATION: Where permitted, apply specified rate in a minimum of 2
to 10 gallons of spray mixture per acre. Do not apply aerially when wind speed is
greater than 10 mph.

NOTE: Do not apply aerially when Metribuzin 4L is tank mixed with Lasso®.

For All Applications of Metribuzin 4L: Sprayer must be accurately calibrated
before applying Metribuzin 4L. Check sprayer during application to be sure it is
working properly and delivering a uniform spray pattern. As the volume of spray
mixture decreases per acre, the importance of accurate calibration and uniform
application increases. Avoid over application, misapplication, and boom and spray
air deflection. Misapplication will increase spray drift. (Crop injury may occur as a
result). Avoid spray skips and gaps which allow weeds to grow in untreated soil.
Do not apply when weather conditions favor spray drift and/or when sensitive or
cooler season crops, such as cole crops, onions, peas, or strawberries are present
in adjacent fields or in areas where wheat is growing in coarse tilled soils.

SPRAYER CLEANUP: Spray equipment must be thoroughly cleaned to remove
remaining traces of herbicide that might injure other crops to be sprayed. Drain any
remaining spray solution of Metribuzin 4L from the spray tank and dispose of
according to label disposal instructions. Rinse the spray tank and refill with water,
adding a heavy-duty detergent at the rate of one cup per 20 gallons of water. Recycle
this mixture through the equipment for 5 minutes and spray out. Repeat this
procedure twice. Fill the spray tank with clean water, recirculate for 5 minutes, and
spray out. Clean pump and nozzle screens thoroughly. Wash away any spray mix-
tures from the outside of spray tank, nozzles or spray rig. All rinse water must be
disposed of in compliance with local, state, and Federal guidelines.

APPLICATION OF METRIBUZIN 4L IN FLUID FERTILIZERS
Metribuzin 4L may be applied in fluid fertilizer solutions to alfalfa and soybeans
by following the appropriate mixing procedures and compatibility check. When using
tank mix combinations, be sure all components are compatible.

Compatibility checks of Metribuzin 4L and tank mix combinations which include
Metribuzin 4L should be made for each batch of fluid fertilizer because of the
variability of these fertilizers.

Compatibility Check:
1. Pre-mix 2 teaspoonsfuls of Metribuzin 4L with 8 teaspoonsful of water (1:4 ratio)
in a quart jar by adding the water first and followed with Metribuzin 4L. Mix
thoroughly. If a second herbicide is to be used, double the amount of water
(1:8 ratio) and add the second herbicide after mixing Metribuzin 4L first.
2. Then pour 1 pint of fluid fertilizer into the quart jar and shake well.

3. Allow to stand for 5 minutes.

THIS COMPATIBILITY CHECK SHOULD ONLY BE USED WHEN MIXING WITH
FLUID FERTILIZERS.

Interpretation of Results: If the solution in the jar appears to be uniform, without
signs of agglomeration or, without separation of an oily film on top of the fertili-
zer, then the mixture may be used. If not, repeat the compatibility check using twice
the amount of water or add a compatibility agent to the water. If separation occurs, but
the mixture can be resuspended by shaking, then application is possible with good
agitation in the spray tank.

Tank Mixing Guidelines:
1. Add the required amount of water and compatibility agent (if required) to the
tank. Start agitation system while adding Metribuzin 4L and follow by adding the
fluid fertilizer and agitation.
2. If a second herbicide is to be used, follow as above in 1, but use twice the
amount of water. Start agitation and add Metribuzin 4L and follow by adding the
drug of choice, and then continue filling the tank with fluid fertilizer.
3. Maintain continuous agitation to assure uniform spray mixture until the tank is
emptied.

COMMERCIAL IMPREGNATION AND APPLICATION OF METRIBUZIN 4L ON
DRY BULK FERTILIZER

Dry bulk fertilizer may be impregnated or coated with Metribuzin 4L for application
to established alfalfa and to soybeans. All instructions, precautions, and special
precautions on this label must be followed along with state regulations relating to dry
bulk fertilizer blending, impregnating and labeling.

Impregnation: To impregnate, use a system consisting of a belt, conveyor, or
closed drum which is used for dry bulk fertilizer blending. Any commonly used fer-
tilizer can be impregnated with Metribuzin 4L except ammonium nitrate, or fertili-
izers containing ammonium nitrate, potassium nitrate, or sodium nitrate. Do not use
on powder lime.

Apply using a minimum of 200 lbs dry bulk fertilizer per acre and up to a maximum
of 450 lbs per acre. To impregnate or coat dry bulk fertilizer, mix Metribuzin 4L with
sufficient water to form a sprayable slurry. The delivery nozzles must be directed to
deliver a fine spray toward the fertilizer for thorough coverage while avoiding
spray contact with mixing equipment. Uniform impregnation of Metribuzin 4L to dry
bulk fertilizer will vary and if the absorptivity is not adequate, an absorbent powder
may be added to produce a dry, free-flowing mixture. Micronutrient (Johns-Manville
Product Corporation) is the recommended absorbent powder. When another her-
biocide is used with Metribuzin 4L, mix and impregnate immediately.

Apply immediately after impregnation unless experience has shown that impreg-
nated fertilizer can be stored without becoming lumpy and difficult to spread.

Rates: Select the specified rate of Metribuzin 4L per acre from the appropriate
section of this label and refer to the formula below to determine the amount of
Metribuzin 4L which is to be impregnated on a ton of dry bulk fertilizer based on
the amount of fertilizer which will be distributed on one acre.

\[
\text{Pt Metribuzin 4L} \times \frac{2000 \text{ lb to Fertilizer}}{\text{Per Acre}} = \frac{\text{Pt Metribuzin 4L}}{\text{Ton of Fertilizer}}
\]

APPLICATION: Uniform application is essential for satisfactory weed control.
Accurate calibration of fertilizer application equipment is essential for uniform distri-
bution to the soil surface. The recommended method of application is to apply
1/2 the specified rate and overlap 50 percent or more to double apply by splitting the
middles to obtain the best distribution pattern.

If fertilizer materials are excessively dusty, use diesel oil or other suitable additive
to reduce dust prior to impregnation as dusty fertilizer will result in poor distribution
during application. Crop injury and poor weed control may occur where the
impregnated fertilizer is not uniformly applied.

INCORPORATION AND COMBINATION USES: When Metribuzin 4L is to be
used in combination with another herbicide, follow directions on this label for combi-
nations, rates, crops, incorporation, and special precautions.

SOYBEANS
(Except California)
Metribuzin 4L herbicide tank mix combinations are recommended for preplant
incorporated applications, emergence surface applications, split-shot applica-
tion and extended split-shot application. Metribuzin 4L is also recommended as an
overhead application following a preplant incorporated application of a recommend-
ed grass herbicide and alone as a preemergence surface application. All these
applications can be applied with ground equipment, and some can be applied with
aerial spray equipment. In addition, Metribuzin 4L can be applied as a post emer-
gence directed spray to soybeans in certain states.

SPECIAL PRECAUTIONS (Soybeans): Injury to soybeans may occur when
Metribuzin 4L is used under the following conditions:
• When fields have a moisture level of 7.5 or higher.
• Due to the sensitivity of certain soybean varieties, do not use Metribuzin 4L on
Altona, AP 55, AP 71, Argrow 6350, Burtler, Coker 102, Coker 156, Dassel, GL
3202, Gowan, Maple Archer, NS 3655, NKS 1884, Paloma 350, Portage, Regal,
Sanjuan, Serco, Terra-Vig 505, Todd 55, Tracy Vansy, and Vinton 81. Consult
your Loveland Products representative or your seed supplier for information on the
tolerance of newly released soybean varieties, prior to use of Metribuzin 4L.
METHIBASIN 4L
EPA REG. NO. 34704-990

- When applied in conjunction with soil-applied organic phosphate pesticides.
- Crop application or boom overlapping may result in stand loss and soil residues.
- Uneven application or improper incorporation can decrease the level of weed control and increase the level of injury.
- When applied to any soil with less than 1/2% organic matter.
- Soil incorporation deeper than recommended.
- When sprayers are not calibrated accurately.
- When heavy rains occur soon after application, especially in poorly drained areas where water may stand for several days.
- When soybeans are planted less than 1-1/2 inches deep, particularly in pre-emergence application.

Activation: A minimum amount of soil moisture is required to activate Methibasin 4L. In areas of low rainfall, preemergence applications to dry soil should be followed with light irrigation of 1/4 to 1/2 inch of water. Do not apply heavy irrigation immediately after application. As with many surfactant-applied herbicides, weed control and crop tolerance vary with rainfall and soil texture.

Grazing and Feeding Treated Vines: Treated vines may be grazed or fed to livestock 40 days after application when Methibasin 4L is applied alone or with Trelina 6G, Dual 11G, Promar 8G or Lasso 8G.

Do not use treated vines for feed or forage when Methibasin 4L is applied with Sonalan 8G, linuron plus Lasso or linuron plus Dual.

Rate Ranges: Where a rate range is shown, use a lower rate on soils that are coarse textured or low in organic matter. Use a higher rate on soils that are relatively fine textured or high in organic matter.

Replanting: If replanting is necessary in fields treated with Methibasin 4L as directed on this label, the field may be replanted to soybeans. When replanting a minimum of tillage is recommended. Do not apply as a second treatment as injury to soybeans may occur.

For control of lespedeza, redroot pigweed, and wild mustard, for suppression of yellow and giant foxtails on alkaline (calcareous) soils in Nebraska, Minnesota, South Dakota and North Dakota only, apply Metribuzin 4L at rates of 1/2 pt/acre on medium soils and 1/2 to 3/4 pt/acre on fine soils regardless of soil organic matter percentage (use 3/4 pt only when soil pH is less than 7.5 and weed pressure is heavy). The 1/2 rate of Metribuzin 4L alone can be applied regardless of soil pH. For control of other weeds listed on this label use Metribuzin 4L mixed to high rates specified in the table above, but note that crop injury may occur on soils having a calcareous surface area or a pH of 7.5 or higher.

Silty clay loam soils are transitional soils and may be classified as medium textured soils in some regions of the U.S.

2 Refer to the appropriate section of this label for use of Metribuzin 4L on soybeans in coarse soils with 0.0% or more organic matter in certain states.

USES OF METRIBUZIN 4L HERBICIDE IN COMBINATION WITH OTHER HERBICIDES

SEQUENTIAL APPLICATION OF SCEPTER FOLLOWING METRIBUZIN 4L
If needed, application of Metribuzin 4L alone or in a registered tank mix according to directions on this label, may be followed by an early postemergence application of Scepter herbicide (1.5 lb/gal liquid or 70 DG) for control of cocklebur. Apply 1/3 to 1/2 pint of Scepter (0.7 to 1.4 ounces of Scepter 70 DG) in a minimum of 20 gallons of water per acre. Use 1/3 pint of Scepter (0.7 ounce of Scepter 70 DG) if cocklebur is less than 2 inches tall or if there are less than 3 leaves and is actively growing. For cockleburs less than 6 inches tall and actively growing use 1/3 pint of Scepter (1.4 ounces of Scepter 70 DG per acre. Do not use Scepter when soybeans or cockleburs have been subjected to stress conditions such as temperature or moisture extremes. Do not exceed a total of 2/3 pint of Scepter (2.8 ounces of Scepter 70 DG) per acre in one season. Wait at least 10 days after application of Scepter before cultivating.

When preparing the spray mixture with Scepter, add 2 pounds of nonionic surfactant approved for use on growing crops and containing at least 90% active ingredient per 100 gallons of mixture. Apply crop oil concentrate (COC) at the rate specified on the COC label.

Use Scepter only in the states where it is registered as listed on the product label.

Apply Scepter at least 90 days before harvest of soybeans. Do not graze or feed soybean forage, hay, or straw to livestock.

Refer to the Scepter label for additional precautions and directions, limitations, and information on environmental hazards and planting of rotational crops.

SPLIT-SHOT APPLICATION

A preplant incorporated application of Metribuzin 4L tank mixed with either TriTrent, Lasso, Dual, Prowl, or Sonoran and followed by a preemergence surface application of Metribuzin 4L alone after planting but prior to soybean emergence, will control more broadleaf and grass weeds in soybeans than when either herbicide is used alone.

Refer to the TriTrent, Lasso, Dual, Prowl or Sonoran labels, and to appropriate sections of this label for directions on soil preparation, herbicide application, incorporation techniques, herbicide rates, weed species controlled, and restrictions for using tank mix combinations of Metribuzin 4L. Carefully observe the Special Precautions section concerning the use of Metribuzin 4L in tank mix combinations on soybeans.

When a Split-Shot application of Metribuzin 4L with Prowl, TriTrent, or Sonoran is used, the preplant incorporated tank mix may be applied up to 21 days prior to planting soybeans; with Dual or Lasso, the preplant incorporated tank mix may be applied up to 14 days prior to planting.

On medium and fine textured soils with greater than 2% organic matter, a rate range is specified for the Metribuzin 4L preemergence overapplication application. The higher rate should be used (a) in fields with a history of severe broadleaf weed pressure, (b) the time between preplant incorporated tank mix and preemergence overapplication applications approaches the maximum stated above, and/or (c) when the organic matter content of the soil is at the upper end of the indicated range.

For black nightshade control, refer to the appropriate sections of the Lasso, Dual, or Sonoran labels for specific instructions.

1 Silty clay loam soils are transitional soils and may be classified as medium textured soils in some regions of the U.S.

2 On coarse textured soils, do not use on sand soils with less than 1% organic matter, or on loamy sand or sandy loam soils with less than 0.5% organic matter. However, on coarse textured soils with a calcareous surface area or a pH of 7.5 or higher, do not use on sand soils with less than 2% organic matter, or on loamy sand or sandy loam soils with less than 1% organic matter.

3 Use this lower rate of Metribuzin 4L in the preplant incorporated tank mix on soils having a calcareous surface area or a pH of 7.5 or higher, and in those situations where soils within a field vary extremely in texture or organic matter content.

4 Reduce this preemergence overlayer rate of Metribuzin 4L by 1/4 pt/acre when using SPLIT-SHOT application on soils with over 4% organic matter and which have a calcareous surface area or a pH of 7.5 or higher.

EXTENDED SPLIT-SHOT APPLICATION
(Includes No-Till, Reduc-Till, Ridge-Till, Strip-Till, Mulch-Till)

An early preplant (surface-applied or shallow incorporated) application of Metribuzin 4L tank mixed with either Dual or Lasso, followed by a preemergence surface application of Metribuzin 4L tank mixed with Dual or Lasso after planting but prior to soybean emergence, will control more broadleaf and grass weeds in soybeans than either herbicide used alone.

An Extended Split-Shot application will decrease the need for tillage and/or contact herbicides for the control of existing vegetation prior to planting, while providing residual control of weeds after planting.

When an Extended Split-Shot application of Metribuzin 4L with Dual or Lasso is used, the preplant tank mix combination may be applied 15 to 30 days prior to planting soybeans. Follow directions on the label accompanying the product for Split-Shot applications from 0 to 14 days before planting.

Where a rate range is specified, the higher rates should be used (a) in fields with a history of severe weed pressure, (b) when the time between early preplant tank mix and preemergence overapplication applications approaches the maximum 30 days, (c) when the organic matter content of the soil is at the upper end of the indicated range, (d) when heavy crop residues are present on the soil surface, and/or (e) when the early preplant tank mix application is shallow incorporated (e.g., use 2 to 2 1/2 qt Lasso in the early preplant tank mix when surface applied and use 2 1/2 to 3 qt Lasso when the tank mix is to be lightly incorporated).

When weeds exceed 1 1/2 to 1-1/2 inches in height or diameter at application, use a contact herbicide, such as Round-Up® or Gramoxone.

Refer to the Dual or Lasso label, and to appropriate sections of this label for additional information on soil preparation, herbicide application, weeds controlled, precautions, restrictions, limitations and sprayer clean up.
## METRIBUZIN 4L PLUS SONALAN

**METRIBUZIN 4L PLUS SONALAN**

Metrribuzin 4L plus Sonalan Overlay Application: Metribuzin 4L may be applied as a preemergence overlay application following a preplant incorporated application of Sonalan 3 EC. Consult the Sonalan label for specific directions on use, instructions, restrictions, and any additional weeds not specified on this label.

Metrribuzin 4L plus Sonalan Tank Mix Application: Incorporate the tank mixture into the top 1 to 2 inches of soil within 2 days after application. For preemergence application, refer to the General Information section in the front of the label.

Application: Sonalan should be uniformly applied and thoroughly mixed into the soil within 2 days after application. For specific application information, refer to the General Information section in the front of this label.

* Silty clay loam soils are transitional soils and may be classified as medium textured soils in some regions of the U.S.

1. On coarse textured soils, do not use on sand soil with less than 1% organic matter. However, on coarse textured soils with a calcareous surface area or a pH of 7.5 or higher, do not use on sand soils with less than 2% organic matter, or on loamy sand or sandy loam soils with less than 1% organic matter.

2. Use the lower rate of Metribuzin 4L in the early preplant tank mix on soils having a calcareous surface area or a pH of 7.5 or higher, and in those rare situations where soils within a field vary extremely in texture or organic matter content.

3. Prepare the soil surface by deep plowing, offset diskinig or tandem diskinig prior to the application of the herbicide combination. The soil surface should be well prepared and free of clods and trash.

4. This Metribuzin 4L plus TriTrellan tank mix combination may be applied and incorporated into the soil up to 10 days before planting.

5. Mixing: Refer to the General Information section in the front of this label.

1. Do not use on coarse soils with less than 1% organic matter.

2. Silty clay loam soils are transitional soils and may be classified as medium textured soils in some regions of the U.S.

3. For control of lambquarters, redroot pigweed, wild mustard, and green and yellow foxtails on alkaline (calcareaous) soils in Minnesota, Nebraska, South Dakota, and North Dakota only, apply Metribuzin 4L at rates of 1/2 pt/acre on medium soils and 1/2 to 3/4 pt/acre on fine soils regardless of soil organic matter percentage (use 3/4 pt only where soil pH is less than 7.5 and weed pressure is heavy). The 1/2 pt rate of Metribuzin 4L in tank mix combination with Sonalan can be applied regardless of soil pH. For control of other weeds not listed on the label, use Metribuzin 4L at full rates specified in the table above, but note that crop injury may occur on soils having a calcareous surface area or a pH of 7.5 or higher.

### SPECIAL PRECAUTIONS (Metrribuzin 4L plus Sonalan):

- For additional precautions, restrictions, limitations, incorporation, and sprayer clean-up information, refer to the appropriate sections of this label and the Sonalan label.

- For black nightshade control, refer to the Sonalan label for specific rates and application instructions.

---

## METRIBUZIN 4L PLUS TRELTRAN

### METRIBUZIN 4L PLUS TRELTRAN

Metrribuzin 4L and TriTrellan Overlay Application: Metribuzin 4L may be applied as a preemergence broadcast or band overlay application following a preplant incorporated treatment of Treltran. Consult the Treltran label for specific directions on use, instructions, restrictions, and any additional weeds not specified on this label.

Metrribuzin 4L plus TriTrellan Tank Mix Application: A single application of a tank mix combination of Metribuzin 4L and Treltran EC will control more broadleaf and grass weeds in soybeans when later herbicide is used alone.

<td>1</td>
<td>2</td>
</tr>
</tbody>
</table>

1. Do not use on coarse soils with less than 1% organic matter.

2. Silty clay loam soils are transitional soils and may be classified as medium textured soils in some regions of the U.S.

3. For control of lambquarters, redroot pigweed, wild mustard, and green and yellow foxtails on alkaline (calcareaous) soils in Minnesota, Nebraska, South Dakota, and North Dakota only, apply Metribuzin 4L at rates of 1/2 pt/acre on medium soils and 1/2 to 3/4 pt/acre on fine soils regardless of soil organic matter percentage (use 3/4 pt only where soil pH is less than 7.5 and weed pressure is heavy). The 1/2 pt rate of Metribuzin 4L in tank mix combination with Treltran can be applied regardless of soil pH. For control of other weeds not listed on the label use Metribuzin 4L at full rates specified in the table above, but note that crop injury may occur on soils having a calcareous surface area or a pH of 7.5 or higher.

### INCORPORATION EQUIPMENT

- Set PTO driven equipment (tillers, cultivators, hoes) to cut 2 to 3 inches deep and space rotors to provide a clean sweep of the soil. PTO equipment should not be operated at a speed greater than 4 miles per hour.

- Set disc to cut 2 to 6 inches deep and operate twice in different directions at 4 to 6 miles per hour.

- Set tine harrow and other similar disk-type implements to cut 3 to 4 inches deep and operate twice in different directions at 6 to 8 miles per hour.

For Coarse and Medium Textured Soils Only:

- Set rolling cultivator to cut 2 to 4 inches deep and operate twice at 9 to 8 miles per hour. Set bed conditioner (Do-All) to cut 2 to 4 inches deep and operate at 4 to 6 miles per hour.
METRIBUZIN 4L
EPA REG. NO. 34704-990

SPECIAL PRECAUTIONS (Metribuzin 4L plus Treflan):
• Seeding disease, cold weather, excessive moisture, high salt concentration or
drought may weaken soybean seedlings and increase possibility of damage
from the tank mix. Do not plant soybeans deeper than 2 inches.
• Do not treat any crop not listed on this label for 18 months after the tank-mix
application.
• For additional precautions, restrictions, limitations, and sprayer clean-up
information refer to the appropriate section of this label. Do not use this tank
mix combination on soils containing charcoal in Arkansas, Louisiana and
Mississippi.

METRIBUZIN 4L PLUS DUAL
Metribuzin 4L plus Dual Overlay Application: Apply a preplant incorporated
application of Dual 8E as directed on that product label for use on soybeans. Follow
with a preemergence treatment of Metribuzin 4L as directed on this label for use on
soybeans.

METRIBUZIN 4L PLUS DUAL TANK MIX APPLICATIONS
Preplant Incorporated Application: Incorporate the tank mixture into the top 2
inches of soil within 14 days before planting or using a disk, harrow, rolling cultivator,
or similar implement.

Apply Metribuzin 4L and Dual preplant incorporated if furrow irrigation is used or
when a period of dry weather after application is expected. If soybeans are plant-
ed on beds, apply and incorporate the tank mixture after bed formation.

Preemergence Application: Dry weather following preemergence application of
Metribuzin 4L plus DUAL tank mixture may reduce effectiveness. If weeds develop,
cultivate uniformly with shallow tillage equipment such as a rotary hoe that will
not damage soybeans.

Mixing Instructions: Refer to the General Information section in the front of this
label.

For information on applying Metribuzin 4L in fluid or dry fertilizer refer to the
Application of Metribuzin 4L in Fluid Fertilizers or Commercial Irrigation and
Application of Metribuzin 4L in Dry Bulk Fertilizer under the General Information
section in the front of this label.

1 Do not use on sand soils. Do not apply Metribuzin 4L and Dual tank mix pro-
plant incorporated on sand or loamy sand less than 2% organic matter or crop
injury may occur.
2 Silty clay loam soils are transitional soils and may be classified as medium
textured soils in some areas of the U.S.

SPECIAL PRECAUTIONS (Metribuzin 4L and Dual):
• For additional precautions, restrictions, limitations, and sprayer clean-up
information refer to the appropriate sections of this label and the Dual label.

METRIBUZIN 4L PLUS PROWl
Metribuzin 4L plus Prowl Overlay Application: Apply a preplant incorporated
application of Prowl as directed on that product label for use on soybeans. Follow
with a preemergence treatment of Metribuzin 4L as directed on this label for use on
soybeans.

Metribuzin 4L plus Prowl Tank Mix Application
Preplant Incorporated Application: Prepare the soil by plowing or disk ing to mix
prevailing weed residues into the soil to a depth of 4 to 6 inches.

For specific application information refer to the General Information section in
the front of this label.

Incorporate the tank mixture into the top 1 or 2 inches of soil within 7 days after
application according to label directions for Prowl. Mechanical incorporation is not
required if a rain of one-quarter inch or more occurs within 7 days after application.
Soybeans must be planted no later than 7 days after application of the tank mixture.

Preemergence Application: Except for minimum and no-tille systems, the
seed bed should be firm and free of trash and clods.

For specific application information refer to the General Information section in
the front of this label. Do not apply Prowl preemergence north of Interstate 80.

This application must be made after planting and before crop emergence. Do not
incorporate.

If cultivation is necessary because of soil crusting, soil compaction or weed germi-
nation before rain or irrigation, use shallow tilling equipment such as a rotary hoe
that does not damage soybeans.

Mixing Instructions: Refer to the General Information section in the front of this
label.

For information on applying Metribuzin 4L in fluid or dry fertilizer refer to the
Application Of Metribuzin 4L in Fluid Fertilizers or Commercial Irrigation And
Application Of Metribuzin 4L On Dry Bulk Fertilizer under the General Information
section in the front of this label.

**SPECIAL PRECAUTIONS (Metribuzin 4L plus Lasso)**

- Soil incorporation deeper than recommended will reduce weed control and can result in crop injury.
- For additional precautions, restrictions, limitations, and sprayer clean-up information, refer to the appropriate sections of this label and the Lasso label.
- Do not use on muck or peat soils.

### APPLICATION INSTRUCTIONS

**METRIBUZIN 4L Plus Lasso Tank Mix Preemergence Application**

**PREEMERGENCE**

Metribuzin 4L may be used in a tank mix combination with Lasso as a preemergence band or broadcast application to soybeans in accordance with the specified soil types and dosages.

For specific information regarding spray equipment, dilution rates, mixing, directions for use, methods of application, limitations and restrictions refer to the appropriate section of this label.

Refer to the Lasso label for pertinent instructions, directions for use, restrictions and any additional weeds not specified on this label.
METRIBUZIN 4L
EPA REG. NO. 34704-990

Application: Metribuzin 4L plus Command may only be applied with ground equipment as a preplant or shallow incorporation application. Metribuzin 4L plus Command should be immediately incorporated into the top 1 to 3 inches after application unless surface is dry. On dry soils, incorporate into the top 1 to 3 inches within 3 hours of tank mix application.

Do not apply this tank mix within 1000 feet of towns and subdivisions, commercial vegetable, fruit, nursery or greenhouse operations.

A minimum of 15 gallons spray volume per acre is recommended with the appropriate nozzle types and sizes to produce a coarse spray droplet. The use of an approved agricultural drift reducing additive is recommended for application volumes of 15 to 40 gallons per acre. The use of an approved agricultural drift reducing additive is required at spray volumes of 10 to 15 gallons per acre.

NOTE: Off-site movement of Command spray drift or vapors can cause foliage whitening or yellowing of some vegetation. Prior to application of Command, read and strictly follow all precautions and application instructions as set forth in that label. For additional information on application, refer to the “General Information” section in the front of this label and the Command label.

Weeds Controlled: Brisly Starbur, Carpetweed, Copperleaf, Florida Beggarteweed, Florida Pusley, Gallinsoga, Jimsonweed, Knotweeds, Lambsquarters, Pigweeds, Prickly Sida/Tarweed, Purslane, Common Ragweed, Redweed, Sessabina, Smartweeds, Spurred Anoda, Velvetleaf, Venicia Mallow, Wild Mustards, Barnyardgrass*, Bluegrass, Broadleaf Sida, Crotalaria, Ficopsis (Green Giant, Yellow), Goosegrass, Johnsongrass (seedling*), Fall Purslane*, Texas Purslane, and chicory.

* Use 2 pt/A Command 4EC on coarse and medium textured soils with high populations of these weeds.

1 Crop injury may occur on soils having a calcareous surface area or a pH of 7.1 or higher.
2 Do not applyCommand on coarse soils with less than 1% organic matter.
3 Silty clay loam soils are transitional soils and may be classified as medium textured soils in some regions of the U.S.

SPECIAL PRECAUTIONS (Metribuzin 4L plus Command):
• Do not rotate to wheat, barley, alfalfa or seed corn in the fall of the year of application or in the spring of the following year as crop injury may occur. Do not rotate any crop not listed on this label for 18 months following application of Metribuzin 4L.
• Do not apply when weather conditions favor drift. Do not use treated vines for food or forage.
• Do not apply aerially or through irrigation equipment.

MIXING: Refer to the “General Information” section on this label.

1 Do not use on soils with a pH greater than 7.0.
2 Refer to "Soil Texture" paragraph on this label for specific soil classification.
3 Use the lower rate of Metribuzin 4L in preplant incorporated tank mix as in those situations where soils within a field vary extremely in texture or organic matter content.

Refer to the General Information section of this label for mixing and application directions.

IMPORTANT: If weeds escape in fields treated with these tank mix combinations, postemergence application of a registered and recommended herbicide will be needed for control.

SPECIAL PRECAUTIONS:
- For additional precautions, restrictions, and sprayer clean-up information, refer to the appropriate sections of the labels for Metribuzin 4L and Canopy 75 DF.
- Do not use treated vine or feed or forage.

METRIBUZIN 4L PLUS COMMAND PLUS A GRASS HERBICIDE

Metribuzin 4L may be applied with Command 4EC and a grass herbicide (Trelon, Lasso, Dual, Prowl or Sonatan) for the control of certain broadleaf weeds and grasses in soybeans. This combination will control, or improve control, of: purpleleaf, velvetleaf, velvettop, common ragweed, and wild mustard. Metribuzin 4L and Command 4EC plus a grass herbicide may be applied preplant incorporated broadcast. Consult the Command, Trelon, Lasso, Dual Prowl or Sonatan labels for specific directions for use, instructions, restrictions and additional weed controlled not specified on this label.

Mixing: Refer to the General Information section in the front of this label.

Application: For specific application information, refer to the General Information section in the front of this label.

1 Refer to "Soil Texture" paragraph on this label for specific soil classification. On coarse textured soils with a calcareous surface area or a pH of 7.5 or higher, do not use on loamy sand or sandy loam soils with less than 1% organic matter.
2 The higher rate of Metribuzin 4L is recommended for the control of sicklepod and velvettop. Use the lower rate of Metribuzin 4L in the preplant incorporated tank mix on soils having a calcareous surface area or a pH of 7.5 or higher, and in those situations where soils within a field vary extremely in texture or organic matter content.
3 Higher rate is recommended under moderate to heavy weed infestations.
METRIBUZIN 4L
EPA REG. NO. 34704-990

METRIBUZIN 4L PLUS SCEPTER PLUS A GRASS HERBICIDE

Metrizubin 4L may be applied with Scepter herbicide and a grass herbicide (Trelfan, Lasso, Dual, Protil or Sonalan) for the control of certain broadleaf weeds and grasses in soybeans. Metrizubin 4L and Scepter plus Trelfan or Sonalan may be applied preplant incorporated broadcast or in a band application with Metrziubin 4L and Scepter plus Lasso, Dual or Protil may be applied preplant incorporated, preemergence broadcast or in a band application.

Consult the Scepter, Trelfan, Lasso, Dual, Protil or Sonalan label for specific directions for use, instructions, restrictions and additional weeds controlled not specified on this label.

MIXING: Refer to the General Information section in the front of this label.

Application: For specific application information, refer to the General Information section in the front of this label.

WEEDS CONTROLLED: Metrizubin 4L plus Scepter plus Trelfan, Lasso, Dual, Protil or Sonalan will control the following broadleaf weeds and grasses:

### WEEDS CONTROLLED

#### Annual Grasses
- Barnyardgrass
- Crabgrass
- Johnsongrass (seedling)
- Bluegrass
- Crowfootgrass
- Pucciniagrass
- Broadleaf signal grass
- Foxtails
- Weeds
- Bromegrass
- Goosegrass

#### Annual Broadleafs
- Brilish oat
- Knobweed
- Russian Thistle
- Buffalograss
- Kochia
- Salsola
- Carpetweed
- Lambquarters
- Shepherdspurse
- Cocklebur
- Morningglory, pitted
- Sticky Smartweed
- Canada thistle
- Green foxtail
- Spotted spurge
- Common sunflower
- Cheesehead
- Pigweeds
- Prickly Sunflower
- Red Bidens
- Florida Beggarweed
- Sida/Tessendere
- Velvetleaf
- Florida Peanut
- Purshiana
- Venecia mallow
- Galinsoga
- Rwweed, Common
- Wild mustards
- Jimsonweed
- Redweed

Metrizubin 4L and Scepter plus Trelfan, Lasso, Dual, Protil or Sonalan will suppress (reduce the competition of) ivyleaf and tall morningglory, and red rice.

### APPLICATION INSTRUCTIONS

Metrizubin 4L plus Pursuit Plus Herbicide (Broadcast Rates)

- Soil Texture: Metrizzly 4L (PA/Acre) Pursuit Plus (PA/Acre)
- COARSE: 1/2 2/1-2
- MEDIUM: 1/2 to 3/4 2/1-2
- FINE: 3/4 to 1 2/1-2

Restrictions and Limitations:
- Do not apply this tank mix with aerial or irrigation equipment.
- Do not apply when weather conditions favor drift, or allow sprays to drift on to adjacent desirable plants.
- Do not use treated vines for feed or forage.
- Refer to appropriate sections of the Pursuit herbicide label for restrictions on use area and rotational crops.

### METRIBUZIN 4L PLUS PURSUIT PLUS HERBICIDE

Metrizubin 4L may be tank mixed with Pursuit Plus herbicide for broadcast preemergence or preplant incorporated application to soybeans for control of certain broadleaf and grass weeds. Refer to the Pursuit Plus herbicide label for specific directions for use, instructions, restrictions and any additional weeds not specified on this label.

MIXING AND APPLICATION: Refer to the "General Information" section in the front of this label for directions on mixing and application of Metrizzly 4L

1 Do not use Metrizzly 4L plus Linuron plus (Lasso or Dual) on sand soils with less than 1% organic matter.
2 Silty clay loam soils are transitional soils and may be classified as medium textured soils in some regions of the U.S.

### SPECIAL PRECAUTIONS (Metrizzly 4L plus Linuron plus (Lasso or Dual))

For additional precautions, restrictions, instructions, and sprayer clean-up information, refer to the appropriate sections of this label and the Linuron label and the Lasso or Dual labels.

### FOR USE IN COARSE (LIGHT) SOILS IN Alabama, Arkansas, Florida, Georgia, Louisiana, Mississippi, Missouri, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, and Virginia

Metrizzly 4L herbicide is recommended alone or in combination with Trelfan, Lasso or Dual for use in coarse-textured, low organic matter soils in the states listed above. Consult the Linuron label and the Lasso or Dual labels for specific directions for use, instructions, restrictions and any additional weeds not specified on this label.

MIXING: Refer to the "General Information" section in the front of this label.

Application: For specific application information, refer to the General Information section in the front of this label.

* For control of grass weeds, include Dual, Lasso, Protil, Sonalan or Trelfan at label rates in the tank mix with Metrizzly 4L and Pursuit herbicides.
METHIBUGUZIN 4L

</table>

1. Do not use on sand with less than 1% organic matter.
2. Use the higher rate under heavy weed pressures and/or on soils higher in organic matter.

Methibuzin 4L in Combination with Other Herbicides: Methibuzin 4L is recommended in a tank mix application with Treflan as a preplant incorporated application or as a preemergence overlay application following a preplant incorporated application of Treflan. Methibuzin 4L is also recommended for use as a preemergence application in combination with Lasso or Dual.

FOR USE IN COARSE (LIGHT) SOILS 0.5% or Above ORGANIC MATTER (Broadcast Rates)

1. Do not use on sand with less than 1% organic matter.
2. Use the higher rate under heavy weed pressures and/or on soils higher in organic matter.

SPECIAL PRECAUTIONS:

1. Do not use on sand with less than 1% organic matter, or on sandy loam or loamy sand soils with less than 0.5% organic matter.
2. For additional precautions, restrictions, limitations, and sprayer clean-up information, refer to the appropriate sections of this label and the Treflan, Lasso, or Dual labels.

BURNDOWN WEED CONTROL - FIELD CORN AND SOYBEANS

Methibuzin 4L can be used as part of a herbicide program for burndown of existing vegetation prior to crop emergence in conservation tillage systems. Methibuzin 4L may be tank mixed with 2,4-D, Roundup or Touchdown for control of emerged weeds prior to field corn or soybean emergence.

Methibuzin 4L tank mixes with 2,4-D, Fusion, Roundup or Touchdown may also be used in soybeans for control of emerged weeds prior to crop emergence. Methibuzin 4L, Roundup Ultra or Touchdown can be applied before planting or after emergence in the following areas:

**Field Corn:**
- Illinois, Indiana, Iowa, Kansas, Kentucky, Michigan, Minnesota, Missouri, Nebraska, Ohio, South Dakota, and Wisconsin
- Soybeans: All areas for all products except Fusion tank mixes - see Fusion section of this label for specified states.

Application: Methibuzin 4L may be applied up to 30 days prior to planting or pre-emergence. Apply only ground equipment when Methibuzin 4L is used for burn-down of existing vegetation in conservation tillage systems. Methibuzin 4L and tank mix partner burndown rates are listed in the following three tables.

**METHIBUGUZIN 4L BURNDOWN RATES - FIELD CORN AND SOYBEANS**

RESIDUAL WEED CONTROL

Metribuzin 4L burndown programs can be used as part of a full season weed control program in both field corn and soybeans when: 1) applied as a tank mixture with residual herbicides, or 2) followed with a postemergence weed control program, which is registered for use on that crop.

**Field Corn:**
- Do not apply on coarse textured soils with less than 1.5% organic matter.
- Do not apply more than 6 fl oz of Metribuzin 4L per acre on soils with less than 2% organic matter.
- Do not apply on soils having pH 7.0 or greater.
- Do not apply more than 6 fl oz of Metribuzin 4L (0.25 pound active ingredient) per acre per growing season.
- Corn seed should be planted a minimum of 1-1/2 inches deep.
- Metribuzin 4L may only be used in hybrid seed corn production fields if both inbred parents are known to be tolerant to Metribuzin 4L.

**Soybeans:**
- Apply only 2,4-D low-volatile ester formulations which are registered and recommended for preplant or burndown use in soybeans.
- Do not apply tank mixtures containing 2,4-D LVE if wind is blowing toward desired susceptible plants (i.e., cotton, tobacco, tomato, etc.) or when wind speeds exceed 6 miles per hour.

Feeding restrictions. Corn treated with Metribuzin 4L may be harvested for silage or grain 60 days after treatment. Soybean vines or hay treated with Metribuzin 4L may be grazed or fed to livestock 40 days after application. Do not feed hay, forage, fodder or grain 2,4-D, Select, or Fusion treated vegetation. Follow the most restrictive preharvest interval of all products used in a tank mixture.

Weeds controlled: Metribuzin 4L in tank mixtures with the above herbicides will provide burndown control of the weeds listed below.
METRIBUZIN 4L
EPA REG. NO. 34704-990

For residual control, Metribuzin 4L burndown programs may include tank mixes with the following herbicides or combination of herbicides:

**Field Corn**
- Alachlor: Dual
- Atrazine: Dual II
- Barvan: ExtraZine II
- Biso: Frontier
- Biso II: Guardsman
- Biso Lite: Harness
- Bladex: Harness Xtra
- Broadside + Dual: Linex
- Broadside Plus: Linex
- Bullet: Limuron
- Clarity: Lorox
- Cycle: Marksman

* Use only Pursuit resistant/tolerant corn hybrids.

**Soybeans**
- Alachlor: Frontier
- Broadside + Dual: Gemini
- Campy: Limuron
- Command: New Lorex Plus
- Detail: Pentoran
- Dual I: Preview
- Dual II: Proil

* Metribuzin 4L used (alone and in tank-mixes) on soybeans at higher labeled rates than those listed for burndown weed control will also provide residual control of some weeds listed in the Weeds Controlled by Metribuzin 4L and Metribuzin 4L Tank Mix Combinations section of the Metribuzin 4L label.

**POTATOES**
Metribuzin 4L herbicide is recommended for use in field, aerial, or specified, low-rate, ground spray equipment as a preemergence and/or postemergence application to potatoes. Early maturing sweet or white potatoes may be injured with postemergence applications. The varieties Atlantic, Bellsport, Centennials, Colorado, and Shepody are sensitive to Metribuzin 4L. Avoid postemergence applications on these varieties. Preemergence applications on these varieties may cause crop injury under adverse weather conditions, on coarse soils, or on high soil pH, with higher rates per acre and with mechanical incorporation.

**Aerial Application**
Metribuzin 4L may be applied in aerial spray equipment as a preemergence and/or postemergence application at 5 or more gallons per acre.

**Chemigation**
Metribuzin 4L may be applied preemergence and/or early postemergence to potatoes using water, pelleted, solid, or liquid, aerial, and ground equipment. Apply specified dosage in 1/4 to 3/4 inch of water per acre (1/4 to 1 inch on sandy soil) as a continuous injection in self-propelled systems or apply in the last 15 to 30 minutes of the set in other systems. Be sure the Metribuzin 4L has flushed the lines before shutting down the system.

**WEEDS CONTROLLED**
Metribuzin 4L applied to potatoes according to directions, will provide economic control of the following weeds. For optimum control, applications should be made before weeds are 1 inch tall. [See Note]

**GRASSES**
- Barnyardgrass
- Crabgrass, large
- Crabgrass, smooth
- Foxtail, giant

**BROADLEAVES**
- Kochia
- Purslane, common
- Nightshade, hairy
- Sunflower, common

**Note:** Where insensitive-resistant weeds are present, Metribuzin 4L alone may not provide adequate control.

**BROADCAST APPLICATION INSTRUCTIONS**

<table>
<thead>
<tr>
<th>CROP</th>
<th>Metribuzin 4L Pl/Acre</th>
</tr>
</thead>
<tbody>
<tr>
<td>Soybeans (Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Mississippi, Missouri, North Carolina, Oklahoma, South Carolina, Tennessee, and Texas)</td>
<td>1/2 to 1 (Broadcast Basis)</td>
</tr>
</tbody>
</table>

* Apply proper dosage using 10 to 100 gallons of water per acre as a directed spray in a 6 to 8 inch band on each side of the row after soybeans are 8 inches tall and before broadleaf weeds are 3 inches tall and before grasses and common ragweed are 1 inch tall. For best results the spray must cover weed foliage with minimum or no contact with soil surface. Add a needless surfactant such as Ortho to the spray mixture to better wetting of weed leaf surfaces. To determine the correct dosage of Metribuzin 4L for a band application see “Bandied Application” under the General Information section in the front of this label.

**POSTEMERGENCE APPLICATION**
Applying specified dosage as a broadcast spray over the top of potato plants. Use rates of 1/2 to 1 pint/100 acres for control of redroot pigweed and common lambsquarters only. Apply the 1 pint/100 acres rate for control of other weeds listed on this label.

If necessary, a second postemergence directed spray application can be made after 7 days.

Do not feed or graze green soybean vines. Do not harvest soybeans or use dry soybean vines for feed or forage within 70 days of last application.

**SPECIAL PRECAUTIONS (Directed Postemergence):** Do not apply directly to soybeans or other crops that may be subsequently harvested. Do not allow spray to contact more than the lower 1/4 to 1/2 of soybean plants. Soybean leaves contacted by the spray will be killed.

Do not apply Metribuzin 4L postemergence to sensitive soybean varieties. See "Special Precautions" in the front of this label.

To avoid injury to other crops or desirable plants from spray drift, spray pressure must not exceed 30 psi and the spray nozzle must be fitted with nozzles no smaller than 0.008 T-F (or equivalent). Do not apply under weather conditions which favor drift.
**METRIBUZIN 4L**
**EPA REG. NO. 34704-990**

**SPLIT APPLICATIONS:** This product may be applied once preemergence and once postemergence as directed above.* Do not exceed 2 pint total per acre per season.

**IDAHO, OREGON AND WASHINGTON ONLY:** Two postemergence applications can be made as broadcast spray treatments over the tops of potato plants if Metribuzin 4L is not applied preemergence. Use 1/2 to 1 pint/acre for control of redroot pigweed and lambquarters only. On coarse (sandy) soils with low organic matter do not exceed 1/2 pint/acre per application. On medium and heavy soils only use 1 pint/acre per application for control of other weeds listed on this label for suppression of hairy nightshade. Make the first application early in the season while weeds are still small. Allow at least 14 days before the second application. Do not apply after June 30, land to be planted to crops other than potatoes.*

*Refer to Special Precautions - Potatoes below.

**TANK MIXES:** Metribuzin 4L may be tankmixed with the following herbicides:
Dual/Dual II, Eptam, Provi 3.3 EC Matrix. In addition, three-way tankmix combinations may be used for Metribuzin 4L plus Dual/Dual II, Eptam or Provi 3.3 EC Plus Matrix when applied preemergence. Refer to each product's label for precautionary statements, restrictions, application information and weeds controlled.

**Dual/Dual II:** Metribuzin 4L may be applied in a tankmix combination with Dual/Dual II as a preemergence broadcast application. Apply Metribuzin 4L at 3/4 to 2 pints per acre and Dual/Dual II at 1.5 to 3 pints per acre according to the respective labels for use of each product alone on potatoes.

**Eptam:** Metribuzin 4L may be tankmixed with Eptam at rates and uses permitted on each product's label.

**Provi 3.3 EC:** Metribuzin 4L may be applied in tankmix combination with Provi as a preemergence or early postemergence broadcast application. As a preemergence mix, apply Metribuzin 4L at 1 to 2 pints per acre and Provi at 1 to 2.5 pints per acre. As an early postemergence spray, apply Metribuzin 4L at 1 to 2 pint per acre and Provi to 1.5 to 3.5 pints per acre before the crop is in the 6-inch growth stage.

**Matrix:** (except the following counties in Colorado: Alamosa, Conejos, Costilla, Rio Grande and Saguache) Metribuzin 4L may be applied in tankmix combination with Matrix as a preemergence and/or early postemergence application for improved control on weeds such as Russian thistle, kochia and common lambsquarters. As a preemergence mix, apply Metribuzin 4L at 2 to 4, 1,525 pints per acre and Matrix at 1 to 1-1/2 oz product per acre. As an early postemergence spray, apply Metribuzin 4L at 1 to 2.5 pint per acre and Matrix at 1 to 1-1/2 oz product per acre. Use a nonionic surfactant at a rate of 0.125% w/v (1 pt/100 gallon of water). Apply before the crop exceeds 14 inches in height. Postemergence applications of Matrix treatments should be made prior to June 30.

**SPECIAL PRECAUTIONS:**

- Do not use Metribuzin 4L on potatoes in Kern County, California.
- Do not apply more than a total of 2 pints Metribuzin 4L per acre in a single crop season regardless of the method of application. Do not make postemergence applications prior to rainfall or irrigation on recently cultivated potatoes, nor within 3 days after periods of cool, wet cloudy weather or injury may occur.
- Postemergence applications may cause some chlorosis or minor necrosis. These symptoms may be more severe if seed-piece decay is occurring or if growing conditions favor crop stress.
- Postemergence applications may be made only on russy or white skinned varieties that are not early maturing.
- Potato varieties may vary in their response to herbicide application. When using Metribuzin 4L for the first time on a particular variety, always determine crop tolerance before using on a field scale.
- Do not apply Metribuzin 4L within 60 days of harvest.
- Do not use air blast sprayers.
- Do not apply to sweet potatoes or yams.
- Do not rotate any crop not listed on this label for 18 months following application of Metribuzin 4L.

Certain varieties of wheat and barley are sensitive to Metribuzin 4L (see the wheat and barley section of this label for sensitive varieties) and should not be planted during the next growing season unless the following cultural practices occur:

1. Potato vines left in rows as a result of harvest must be uniformly distributed over the soil surface prior to plowing and;
2. Plow with a moldboard plow to a depth sufficient to mix the upper 8 inches of soil.

**ALFALFA AND SAINFOIN**

Metribuzin 4L herbicides is recommended for use in alfalfa and sainfoin in the following areas:

1. Alfalfa - Post Dormant Application of Metribuzin 4L Impregnated on Dry Fertilizer Only (Connecticut, Illinois, Indiana, Iowa, Kansas, Kentucky, Michigan, Minnesota, Nebraska, New Mexico, New York, Ohio, Oklahoma, Pennsylvania, South Dakota, Tennessee, Texas and Wisconsin).

Metribuzin 4L is recommended for use in aerial or ground spray equipment as a broadcast surface application to established crops of alfalfa and sainfoin for the control of certain grass and broadleaf weeds.

**APPLICATION:** Refer to General Information in the front of this label for detailed information on the application of Metribuzin 4L. For information on applying Metribuzin 4L in fluid or on dry fertilizer refer to the Application Of Metribuzin 4L In Fluid Fertilizers or Commercial Impregnation And Application Of Metribuzin 4L On Dry Bulk Fertilizer under the General Information section of this label.

**SPECIAL PRECAUTIONS:**

- Use Metribuzin 4L only on established alfalfa and sainfoin. Do not apply Metribuzin 4L after growth begins in the spring or before growth ceases in the fall. If specified on this label.
- Do not grazze or harvest within 28 days after application.
- For best weed control, apply Metribuzin 4L when weeds are less than 2 inches tall or before weed infestation is 2 inches in diameter.
- Reduced weed control may occur when extended dry conditions follow application of Metribuzin 4L.
- Crop injury may occur when:
  1. Crop is under stress conditions such as diseases, insect infestations, poorly drained soils, drought or winter injury at time of application;
  2. Crop is stressed within 12 months after seeding;
  3. There is excessive irrigation or rain immediately after application. Do not apply more than 1/2 inch of water in the first irrigation after Metribuzin 4L is applied.

**ALFALFA AND SAINFOIN**

(All Areas Except California)

**BROADCAST APPLICATION INSTRUCTIONS**

**CROP**

**METRIBUZIN 4L PB/Acre**

Alfalfa and Sainfoin (Except California) 1/2 to 2

Select the proper dosage according to weeds known to be present in field to be treated. On loamy sand soils in Oregon and Washington, do not apply more than 1 pt of Metribuzin 4L per acre.

**FOR USE ON MIXED STANDS OF ALFALFA AND GRASSES:**

Rates of 1 to 1-1/2 pt Metribuzin 4L per acre will provide partial reduction of forage grass stands. These rates may be used to reduce forage grass stands to prevent crowding out of alfalfa. Higher rates will severely reduce forage grass stands.

Metribuzin 4L should not be used on sand soils. In areas west of the Rocky Mountains, avoid using Metribuzin 4L on soils with calcareous surface areas, high levels of lime or sodium, or a pH greater than 8.2.

**ALFALFA AND SAINFOIN**

Weeds Controlled (Except California)

Chickweed, Common (Stellaria media) 3/4 to 1 PT METRIBUZIN 4L/acre

Cheat (Bromus secalinus) Penncress (Tritice armatae)

Deadnettle, Purple (Lamium purpureum) Rescuesgrass (Bromus cahiliacris)

Downy brome (Bromus tectorum) Shepherds purse (Capsella bursa pastoris)

Broadleaves
Chickweed, Mouseear
(Calendula officinalis)

Dandelion
(Taraxacum officinale)

Grasses
Barnyardgrass
(Echinochloa crus-galli)

Pea (Pisum annuum)

Weeds Partially Controlled: At the rate of 2 pt/acre Methriben 4L may be used to reduce the competition from curly dock (Flueggea virgata). At 1 to 2 pt/acre, Methriben 4L may be used to reduce the competition of German Moss or knawel (Scleranthus annuus).

ALFALFA AND SAINFONI (California Only)
(Coming Mixed Stands With Grasses)

APPLICATION: Methriben 4L is recommended for use in aerial or ground spray equipment as a broadcast surface application to dormant established crops of alfalfa and sainfoin. Do not apply Methriben 4L after growth begins in the spring or before growth ceases in the fall. Do not apply to either alfalfa or sainfoin during the first growing season after seeding.

For information on applying Methriben 4L in fluid fertilizer solutions to alfalfa, refer to the appropriate section of this label.

For information on commercial impregnation and application of Methriben 4L on dry bulk fertilizer, refer to the appropriate section of this label.

Methriben 4L
1/2 to 1Pt Methriben 4L/Acre

Grass APPLICATION INSTRUCTIONS
Methriben 4L
1/2 to 1Pt Methriben 4L/Acre

Do not apply with aerial spray equipment when wind speed is greater than 10 mph. Do not apply when weather conditions favor spray drift and/or where sensitive cold season crops, such as cole crops, onions, peas, or strawberries, are present in adjacent fields. Applications should not be made when weather conditions favor spray drift, especially in areas where wheat is grown on coarse textured soils in adjacent fields, or injury may occur.

ALFALFA
METHRUBENZ 4L PLUS GRAMOXONE EXTRA TANK MIX

APPLICATION: Methriben 4L plus Gramoxone Extra herbicide tank mix application is recommended for use, during the dormant season, in aerial or ground spray equipment as a broadcast surface application to established alfalfa for the control of certain grass and broadleaf weeds. Do not apply Methriben 4L/Gramoxone Extra tank mix to alfalfa that is more than 2 inches tall. Apply once per season. Do not apply following cutting during growing season. Use a minimum of 10 gallons of water per acre with aerial spray equipment and a minimum of 20 gallons of water per acre with ground spray equipment. Add a non-ionic spreader at label rates to the spray solution.

Weeds Controlled: Methriben 4L plus Gramoxone Extra (1/2 to 2/2 pint/acre) tank mix application will control established weeds. Gramoxone controls weeds by contact activity.

1/2 to 3/4 Pt of Methriben 4L/Acre

APPLICATION INSTRUCTIONS
DOSSAGE/ACRE
Apply specified dosages of Methriben 4L and Gramoxone Extra at least 10 gallons of water per acre with aerial equipment or at least 20 gallons of water per acre with ground equipment. Do not apply this tank mix to alfalfa within 1 ft of solid seed mix. For best weed control, apply when broadleaf weeds and grasses are 1.5 inches tall and are actively growing. Care should be taken to avoid overlaps. Do not apply more than 1 pt of Methriben 4L per acre on any crop, soil, or disease. Use weed control may occur when applied under dry conditions for low application of Methriben 4L. Use of Methriben 4L and Gramoxone Extra tank mix may occur if alfalfa is under stress conditions such as disease, insect infestations, drought, or winter injury or if Methriben 4L is applied to alfalfa for periods of 12 months after seeding.

FOR USE ON MIXED STANDS OF ALFALFA AND GRASSES: Rates of 1 to 1-1/2 pt Methriben 4L per acre will provide partial reduction of forage grass stands. These rates may be used to reduce forage grass stands to prevent crowding out of alfalfa.

Do not graze or harvest within 42 days after application.

In areas west of the Rockies, avoid the use of Methriben 4L on soils with calcarous surface, soils with high levels of lime or sand, and with a pH greater than 8.2. Do not apply Methriben 4L to alfalfa or sainfoin within 10 days of fruiting or seed production.

Do not apply when weather conditions favor spray drift. Aerial application should not be made when wind speed is greater than 10 mph. Do not use on sand soil.

Refer to the Gramoxone Extra label for additional directions, weed species controlled, and precautions.

POST DORMANT APPLICATION OF METHRUBENZ 4L IMpregnated on Dry Fertilizer Only Methriben 4L may be applied after dormancy has been broken, but prior to three inches of new alfalfa shoot growth. Only when applied on dry fertilizer in Connecticut, Illinois, Indiana, Iowa, Kansas, Kentucky, Michigan, Minnesota, Nebraska, New Mexico, New York, Ohio, Oklahoma, Pennsylvania, South Dakota, Tennessee, Texas, and Wisconsin.

Apply at rates of 1/2 to 2 pt per acre on this label for application during dormancy. Application only when alfalfa foliage is dry or crop injury may occur. When using this application method, do not harvest or graze treated alfalfa for 60 days after application.
METRIBUZIN 4L
EPA REG. NO. 34704-990

ASPARAGUS (Established)

Metrizun 4L is recommended for use in ground spray equipment or sprinker irrigation (center pivot, lateral move, or solid set) systems as a single preemergence broadcast application or as a split application consisting of a preemergence broadcast application followed by a post harvest broadcast application.

Refer to the General Information section of this label for directions.

Weeds Controlled: Metrithzun 4L, applied to established asparagus according to directions, will effectively control:

**Broadleafes**
- Chickweed, Common
- (Stellaria media)
- Ragweed, Common
- (Ambrosia artemisiifolia)
- Jimsonweed
- (Datura stramonium)
- Lambquarters
- (Chenopodium album)
- Pigweed, Redroot
- (Amaranthus retroflexus)
- Grasses
- Crabgrass
- (Digitaria sanguinalis)
- Foxtails
- (Setaria spp.)

**APPLICATION INSTRUCTIONS**

**CROP**

**METRIBUZIN 4L (P/Acre)**

**Asparagus**

1 to 2

PREEMERGENCE APPLICATION ONLY

Make a single surface application in early Spring before asparagus spears or farns emerg. If the field is to be disked, apply Metrithzun 4L after disking but before the crop emerges. Use the lower rate for control of the broadleaf weeds listed above. Use the higher rate in fields with a history of severe infestations of grasses and for maximum residual control. Do not apply within 14 days of harvest.

1 to 2 preemergence plus
2 to 3 post harvest

SPLIT APPLICATION PREEMERGENCE AND POST HARVEST

PREEMERGENCE APPLICATION: Apply before asparagus spears or farns emerg. If the field is to be disked, apply after disking but prior to crop emergence. Do not apply within 14 days of harvest.

Post Harvest Application: Apply after last harvest of the season but prior to emergence.

The lower combination rates may be used for control of common ragweed, lambquarters, redroot pigweed, and red sorrel. Use the higher combination rates for other weeds listed or in fields with severe grass infestations or for maximum post harvest control of emerged weeds.

**IMPORTANT:** The total amount of Metrithzun 4L applied in one crop season may not exceed 4 lbs per acre.

**SPECIAL PRECAUTIONS (Asparagus):**
- Do not use in newly seeded asparagus or on young plants during the first growing season after setting crowns.
- Do not apply post harvest applications until after the last harvest of spears.
- Aerial application is prohibited.

**CARROTS**

Special Conditions of Sale Provision for Use on Carrots: The following directions for use were developed under the direction of HR-4 (government minor crops use program). As such, the testing was done independently from the testing program of Loveland Products, Inc. Buyer is advised that Loveland Products, Inc. makes no guarantees regarding the product and to the extent allowable by applicable law, all risks of crop injury or product performance are assumed by the Buyer.

Apply Metrithzun 4L herbicide with ground equipment as specified below under Application instructions. For effective control of broadleaf weeds with postemergence applications, apply Metrithzun 4L before weeds are 1 inch in height or diameter. Thorough spray coverage is essential for effective weed control.

Do not use air blast or other high pressure spray equipment to make postemergence applications of Metrithzun 4L. Refer to the appropriate section of this label for additional information regarding spray equipment, dilution rates, mixing, sprayer cleanup, reassignment, container disposal and precautions.

Refer to Mixing under the General Information section of this label for specific application information see General Information and Application instructions at the front of this label.

**FIELD CORN**

POSTEMERGENCE APPLICATION

Metrithzun 4L is recommended for control of selected broadleaf weeds when applied as a tank mix combination with certain broadleaf herbicides currently registered and recommended for postemergence use in field corn. Herbicides which may be tank mixed with Metrithzun 4L include:

- 2,4-D
- Buctril + atrazine (Premix)
- Atrazine
- Basagran
- Buctril + Buctril Gel
- Laddock 6-12
- Marksmann
- *Use only on Pursuit resistant/desistant corn hybrids (IMC - Corn).

**APPLICATION:** Metrithzun 4L may be applied to field corn after crop emergence until just prior to tasseling. Broadcast applications may be made with ground or aerial equipment. For optimum weed control, apply treatments when weeds are small and actively growing, but before reaching the maximum heights listed in the Weeds Controlled table.

POSTEMERGENCE BROADCAST APPLICATION

Ground Application: Adjust nozzle height above crop and weed canopy to ensure uniform spray coverage. Gallons per acre should be increased with increasing weed size and population density.

For tank mixes of Metrithzun 4L plus atrazine, Basagran, Laddock 6-12, Buctril, Buctril + atrazine, Pursuit, Resource, Tough or 2,4-D amine formulations, use flat fan nozzle spaced a maximum of 20 inches apart. Best results are achieved using a minimum spray volume of 10 gallons per acre and spray pressure from 20 to 40 psi.

For Metrithzun 4L tank mixes with Banvel, Clarity, Marksmann, or 2,4-D low volatile ester formulations, use droplet reducing nozzles which are specifically designed to produce coarse sprays and reduce the amount of driftable fines. Additional measures which will help avoid potential drift to sensitive crops and plants include using a minimum spray volume of 20 gallons per acre and keeping spray pressures at or below 20 psi unless otherwise specified by the nozzle manufacturer.

For further precautions and additional instructions, consult the tank mix partner's label.

Aerial Application: Apply in a minimum spray volume of 3 gallons per acre. For optimum spray coverage and distribution, use a minimum of 5 gallons per acre and a maximum pressure of 40 psi. Use a boom and nozzle configuration which will provide a uniform deposition pattern and coverage with low drift potential. Avoid overlaps to prevent potential crop injury. Do not apply near sensitive crops or sensitive plants growing near the treated area. Do not apply when wind speed is greater than 10 mph or when winds are moving toward sensitive crops or plants. To avoid drift hazards, applicator must follow the most restrictive labeling of the products used in a tank mix. Refer to the appropriate tank mix partner's label for further precautions and instructions.
### METRIBIZIN 4L

**EPA REG. NO. 34704-990**

**POST DIRECTED APPLICATION**

Metribuzin 4L in tank mix combinations with Barvek, 2,4-D, Buctril, or Scorpion III may be applied post directed to field corn. Use drop nozzles and appropriate spacing to direct spray below the corn whorl and upper leaves. The top of the target weed canopy must be sufficiently below the whorl and upper leaves of the crop to permit this application and provide adequate spray coverage. The height differential required between the crop and weed canopy will depend on the specific equipment used. Apply before tassel emergence. For further precautions and additional instructions, refer to the appropriate tank mix partner's label.

**ADJUVANTS**

The adjuvants listed below may be utilized with certain Metribuzin 4L tank mix combinations. Consult the tank mix instructions section for the appropriate adjuvant and rate. Use of non-recommended adjuvants or rates may result in severe leaf burn, crop stunting, and/or stand reduction. Use only adjuvants which are exempt from tolerance requirements under 40 CFR 180.1001.

- **UAN** (urea ammonium nitrate) is commonly referred to as 28, 30, or 32% N.
- **Ammonium Sulfate** (spray grade) may be used as an alternative to UAN with certain tank mix combinations.
- **Non-ionic surfactants** should contain at least 80% active ingredient.
- **DO NOT USE** crop oil concentrate (COC) or any adjuvant containing vegetable or petroleum oils with any Metribuzin 4L tank mixtures as severe leaf burn, crop stunting, and/or stand reduction may occur.

**RAINFASTNESS**

Metribuzin 4L will not reduce rainfastness of the recommended tank mix partners. Refer to the individual product labels for rainfastness recommendations.

**SPRAYER CLEANUP**

Refer to each tank mix partner's label and the Sprayer Cleanup section of the Metribuzin 4L label for specific instructions on cleaning spray equipment. Special attention should be given to the required cleanup procedures for 2,4-D, Barvek, Clarity, and Markran.

**SPECIAL PRECAUTIONS**

- Do not use on corn grown for seed, sweet corn, popcorn, or white corn.
- Do not apply more than 0.25 pounds a.i. metribuzin (91 lb Metribuzin 4L) per acre per use season.
- Do not apply when field corn is under stress (see Stress statements below).
- Do not apply aerial applications if sensitive crops or plants are growing in the vicinity of the area to be treated.
- Do not allow spray drift onto sensitive crops or plants.
- Do not use on soil that is loamy sand or sandy loam soils that have less than 5% organic matter.
- Do not use on sandy or loamy sand soils in Washington, Oregon or Idaho or crop injury may occur.
- Observe all precautions and limitations on labeling of all products used in the tank mixtures.

**Stress is any condition or combination of conditions which impairs normal crop growth. Weather, disease, insect damage, fertility or other factors may cause stress. Applications made before or after the corn is under stress from these factors or from periods of prolonged wet, well, or cloudy weather or with respect to flowering, pollen, and/or silking of the crop. Recovery from damage is generally rapid with no lasting effects on new growth. Under extreme stress, stand reductions may occur.**

**Feeding Restrictions:** Field corn treated with Metribuzin 4L may be grazed or harvested for silage or grain 60 days after treatment. Follow the most restrictive preharvest interval on the labels of the products used in the tank mixtures.

**TANK MIX COMBINATIONS**

The Metribuzin 4L tank mixtures listed below can be utilized for control of certain annual broadleaf weeds.

* When weeds are approaching the maximum height listed or found in high densities, use the higher rate of Metribuzin 4L and the selected tank mix partners.

## PERENNIAL WEED SUPPRESSION

The following Metribuzin 4L tank mixtures will provide top growth burndown and in-season suppression of the following perennial weeds; however, regrowth may occur. For the best performance on these weeds, use the maximum rates of Metribuzin 4L, Banvel, Buctril, Buctril + atrazine, Clarity, Marksmen, 2,4-D LV/E or Pursuit specified for these tank mixtures.
METRIBUZIN 4L
EPA REG. NO. 34704-990

Metribuzin 4L + Banvel or Clariflex
Bindweed, field; Dandelion, common; Dock, curly; Smartweed, swamp; Thistle, Canada.
Metribuzin 4L + Buctril or Buctril + atrazine
Thistle, Canada.
Metribuzin 4L + 2,4-D LYE
Bindweed, field; Dandelion, common; Dock, curly; Smartweed, swamp; Thistle, Canada.
Metribuzin 4L + Marksmen
Bindweed, field; Dandelion, common; Dock, curly; Smartweed, Thistle, Canada.
Metribuzin 4L + Pursuit
Thistle, Canada.

PREPLANT AND PREEMERGENCE APPLICATIONS
(Illinois, Indiana, Iowa, Kansas, Kentucky, Michigan, Minnesota, Missouri, Nebraska, Ohio, South Dakota and Wisconsin)

Metribuzin 4L is recommended for additional residual control of certain broadleaf weed species in corn when applied as a tank mix combination with both grass and broadleaf herbicides registered and recommended for use in field corn. Metribuzin 4L can be tank mixed with specified rates of the following herbicides:

<table>
<thead>
<tr>
<th>Herbicide</th>
<th>Rate</th>

<td>2.5 lb a.e.</td>
</tr>
</tbody>
</table>

Application: Metribuzin 4L may be applied to field corn preplant without incorporation up to 30 days prior to planting or preemergence. Applications may be made by either ground or aerial equipment. For tank mixes, follow the most restrictive application methods of all products used.

SPECIAL PRECAUTIONS:
- Do not apply more than 6 fluid ounces Metribuzin 4L (0.25 pound active ingredient) per acre per growing season.
- Do not apply on soils having pH 7.0 or greater.
- Corn seed should be planted a minimum of 1-1/2 inches deep.
- Metribuzin 4L may only be used in hybrid seed corn production fields if both inbred parents are known to be tolerant to Metribuzin 4L.
- Do not use on muck soils as reduced weed control may result.
- Observe all precautions and limitations on labeling of all products used in tank mixes.

Feeding restrictions: Corn treated with Metribuzin 4L may be harvested for silage or grain 60 days after treatment. For tank mixes, follow the most restrictive preharvest interval of all products used.

Weeds Suppressed:
- Common Chickweed
- Common Lambsquarters
- Field Prenyexis
- Pigweed spp.
- Pigweed
- Pigweed
- Pigweed

* Use only on Pursuit resistant/tolerant corn hybrids (FM corn).

Consult the label of herbicide tank mix partners to determine proper use rates for the other product(s).

BURNDOWN WEED CONTROL - FIELD CORN See page 26

GARBANZO BEANS (Chickpeas)
California, Idaho, Oregon, and Washington

Special Conditions of Sale for Use on Garbanzo Beans (Chickpeas): The following directions for use were developed under the direction of IP-4 (government minor crop uses program). As such the testing was done independently from the testing program of Loveland Products, Inc. Buyer is advised that Levend Products, Inc. makes no assurances regarding satisfaction with the product and to the extent allowable by applicable law, all risks of crop injury or product performance are assumed by the Buyer.

Metribuzin 4L herbicide is recommended as a preemergence application for the suppression of certain broadleaf weeds in garbanzo beans.

Weeds Suppressed:
- Common Chickweed
-HENBIT
- Wild Mustard
- Dog Fennel
- Common Lambsquarters
- Pigweed
- Field Prenyexis
- Shepherdspurse

</tr>
</thead>
<tbody>
<tr>
<td>Garbanzo beans</td>
<td>0.5 to 0.75</td>
</tr>
</tbody>
</table>

Apply specified dosage in a single preemergence application using 10 to 40 gallons of water per acre with ground spray equipment. Apply before or after planting but before crop emergence. Thorough incorporation, either by rainfall or by mechanical means, is essential for weed suppression. Under dry conditions, incorporate Metribuzin 4L into the top 1 to 2 inches of soil with spike hoppers, or through incorporation equipment, or other similar shallow incorporation equipment, then cross-harrow to ensure uniform soil incorporation. Where soil surface is moist at the time of application and rain follows before weed emergence, a broadcast application should provide adequate weed suppression.

Uses on coarse-textured soils, sandy soils or any soil with less than 1.5% organic matter will likely cause crop injury. Use the higher rate on fine-textured soils (high in clay or organic matter) and in fields with a history of high weed populations.

SPECIAL PRECAUTIONS:
- Crop injury may result if crop is under stress conditions caused by cold weather, poor soil fertility, disease or insect damage.
- Crop injury may result if application is followed by heavy rain. Avoid application within 0.5 inches of irrigation within one month after application of Metribuzin 4L, or crop injury may occur.
- Do not use on clay soils or poorly drained soils.
- Do not apply preemergence on shallow seedings less than 2 inches deep.
- Do not graze or feed treated vine to livestock within 40 days after application.
- Maintain continuous spray tank agitation to keep material in suspension. Avoid overspraying of spray systems and shut off spray booms while turning, slowing, or stopping, or crop injury will occur.

NOTE: This treatment may cause some chlorosis or minor necrosis. Because garbanzo bean varieties may vary in their susceptibility to Metribuzin 4L, determine crop tolerance prior to adoption as a field scale practice to prevent possible injury.

LENTILS AND PEAS
(Iowa, Oregon, and Washington)

Metribuzin 4L herbicide is recommended as a preemergence and postemergence application for the suppression of certain broadleaf weeds in lentils and peas.

Weeds Suppressed:
- Common Chickweed
- Common Lambsquarters
- Redroot Pigweed
- Corn Spurry
- Pennsylvania Smartweed
- Shepherdspurse
- Field Prenyexis
- Henbit
- Prostrate Knotweed

* Suppression is a reduction in weed size and growth compared to a non-treated area in the same field.
** Preemergence application only.

PREEMERGENCE APPLICATION: Make a single preemergence application of Metribuzin 4L at 0.5 to 1.0 pint per acre per crop year. Apply 10 to 40 gallons of water per acre with ground spray equipment or 5 or more gallons of water per acre with aerial spray equipment. Apply Metribuzin 4L before or after planting. Thorough incorporation, either by rainfall or by mechanical means, is essential for weed suppression. Under dry conditions, incorporate Metribuzin 4L into the top 1 to 2 inches of soil with spike hoppers, or through incorporation equipment, then cross-harrow to ensure uniform soil incorporation. Where soil surface is moist at the time of application and rain follows before weed emergence, a broadcast application should provide adequate weed suppression.
METRIBUZIN 4L
EPA REG. NO. 34704-990

Use the higher rate on fine-textured soils (high in clay or organic matter) and in fields with a history of high weed populations.

Metrizobin 4L may be applied pre- or post plant incorporation as a tank mix combination with FARGO 4EC. Follow the Directions for Use statements on both product labels.

POSTEMERGENCE APPLICATION: One postemergence application may be made per season. Use 1/4 to 1/2 pint of Metribuzin 4L per acre on lentils and spring peas. On winter peas, use 3/8 to 1/2 pint of Metribuzin 4L per acre. For suppression of dog fennel, use 1/2 pint Metribuzin 4L per acre. Apply specified dosage in 20 or more gallons of water per acre with ground spray equipment or 5 or more gallons of water per acre with aerial spray equipment. Do not exceed 40 gal with ground spray equipment. Apply as a broadcast spray when weeds are small (less than 2 inches in height or diameter) and before crop is 6 inches tall.

Temporary chlorosis of the crop may occur. There is an added risk of crop injury if a postemergence application is made following a previous preemergence or preplant incorporated Metribuzin 4L application.

Do not apply over very moist soils or wet crop foliage. Do not apply postemergence within 3 days after periods of cool, wet, or cloudy weather or crop injury may occur.

Do not apply within 24 hours of treatment with other pesticides.

SPECIAL PRECAUTIONS (all applications): Do not apply more than 1 pint of Metribuzin 4L per acre per year. Crop injury may result if crop is under stress conditions caused by cold weather, low fertility, disease or insect damage. Crop injury may also result if application is followed by heavy rain.

Do not use on coarse-textured soils, sandy soils or with less than 1.5% organic matter.

Do not apply to "Estin" lentils.

Do not use on clay loams or poorly covered subsoils.

Do not apply on shallow seedlings less than 2 inches deep (preemergence only).

Do not apply within 50 days of harvest of peas, or within 75 days of harvest of lentils.

Do not graze or feed treated vines to livestock within 40 days after application.

Maintain continuous spray tank agitation to keep material in suspension. Avoid overlapping and shut off spray booms while turning, slowing or stopping, or crop injury will occur.

NOTE: This treatment may cause some chlorosis or minor necrosis. Because lentil and pea varieties may vary in their susceptibility to Metribuzin 4L, determining crop tolerance prior to adoption as a field scale practice is suggested to prevent possible injury.

For additional precautions, restrictions, limitations, and sprayer clean-up information refer to the appropriate sections of this label.

SUGARCANE

SUGARCANE (Hawaii Only)

Metrizobin 4L, a selective herbicide, is effective as a preemergence and an early postemergence broadcast application for control of certain grass and broadleaf weeds. When applied as a spot treatment, it also provides excellent control of perennial grasses and broadleaves.

Ground Application: Metribuzin 4L should be mixed by filling the spray tank half full of water. Then add the specified amount of Metribuzin 4L to suit the total tank capacity and the rate of application per acre (preferably 25 to 35 gallons per acre). Complete filling the tank and maintain sufficient agitation during mixing and spraying to insure a uniform spray mixture.

Aerial Application: Metribuzin 4L is recommended for use in aerial spray equipment as a preemergence or postemergence application to irrigated sugarcane. Aerial spray equipment should be calibrated to apply the proper amount of Metribuzin 4L in 7 to 10 gallons of spray mixture per acre.

Metrizobin 4L applied preemergence or postemergence to the sugarcane as a broadcast spray or spot treatment will effectively control the following when weeds are less than 3 inches in height.

SUGARCANE (Hawaii Only)
BROADCAST APPLICATION INSTRUCTIONS

**METRIBUZIN 4L**
**PL/Acre**
**Remarks**

| 4 to 8 | PREEMERGENCE (Irrigated and non-irrigated sugarcane): Apply specified dosage per acre as a broadcast spray to the soil surface. Applications should be made within two weeks after planting prior to corn emergence or shortly after emergence (spike stage). |
| 1/2 to 1 gal | OR EARLY POSTEMERGENCE (Irrigated and non-irrigated sugarcane): Apply specified dosage per acre as a broadcast spray over the cane. Application may be delayed as long as 4 to 8 weeks after planting provided weeds are less than 3 inches tall.
| 1/2 to 1 gal | OR POSTEMERGENCE: Apply specified dosage per acre as a broadcast spray to control weeds prior to "close in" time when cane shades out the weed growth.
| 1/2 to 1 gal | SPOT TREATMENT: Apply specified dosage in 3 to 5 gallons of finished spray per acre. Spot treatments may be used to control weeds in missed areas, corners of fields, or areas of hard to control weeds.

NOTE: Do not apply more than 18 lb (2 gal) of Metribuzin 4L (3 lb active ingredient)/acre per crop cycle regardless of the method of application. The last application may be made up to 17 months of harvest.

SPECIAL PRECAUTIONS:

- Do not use treated foliage for feed or forage.

SUGARCANE (Louisiana and Texas Only)

Preemergence and postemergence applications of Metribuzin 4L with aerial or ground spray equipment are recommended for control of the following weeds in sugarcane in Louisiana and Texas:

**Broadleaves**

Marigold
(Amaranthus spinosus)

Mustard, Wild
(Brassica kaber)

Figweeds, Garden
(Amaranthus spp.)

Purslane, Oregano
(Porriolo oleracea)

Dandelion, White
(Sowthistle)

Sunflower, Wild
(Chenopodium album)

London rocket
(Strobilanthes iricus)

**Grasses**

Knotgrass
(Bromus inermis)

Sorghum, Winter
(Sorghum halepense)

**For additional precautions, restrictions, limitations, and sprayer clean-up information refer to the appropriate sections of this label.**
METRIBUZIN 4L

<table>
<thead>
<tr>
<th>Metribuzin 4L</th>
<th>Remarks</th>
</tr>
</thead>
<tbody>
<tr>
<td>3 to 6</td>
<td>BROADCAST: Apply specified dosage per acre using 20 to 30 gallons of water with ground equipment or 5 gallons of water with aircraft spray equipment. Apply as a broadcast spray during the Fall after planting or to the stubble after harvest. Make a second application early in the Spring.</td>
</tr>
<tr>
<td>1 1/2 to 3</td>
<td>BAND: Apply specified dosage in 10 to 20 gallons of water per acre in a 30 to 36 inch band over the row during the Fall after planting or to the stubble after harvest. Make a second application early in the Spring.</td>
</tr>
</tbody>
</table>

SPECIAL PRECAUTIONS (Louisiana and Texas only):
- Do not use treated foliage for feed or forage.
- Use the higher rate on heavy clay soil and soil with a high percentage of organic matter. If necessary, a third application may be made in late Spring or early Summer.
- Do not apply within 60 days of harvest.
- For aerial and chisel-till application methods on sugarcane the maximum application rate is 4 lbs Metribuzin 4L/acre.
- To assure that spray will not adversely affect adjacent sensitive nontarget plants, apply this product by aircraft at a minimum upwind distance of 400 ft from sensitive plants.

SUGARCANE (Florida Only)
Postemergence over-the-top or directed spray applications of Metribuzin are recommended for the control of the following weeds in sugarcane in Florida.

Broadleaf
- Amaranth, Siam weed (Amaranthus spinosus)
- Amaranth, Redroot (Amaranthus retroflexus)
- Grasses
  - Barnyardgrass (Echinochloa crus-galli)
  - Foxtail, Smooth (Setaria neglecta)
  - Goosegrass (Eleusine indica)

Grasses
- Crabgrass, large (Digitaria sanguinalis)
- Foxtail, Bristlegrass (Setaria viridis)
- Goosegrass (Echinochloa crus-galli)
- Pigweed, Redroot (Amaranthus retroflexus)

For application to sugarcane, the maximum application rate is 4 lbs Metribuzin 4L/acre. To assure that spray will not adversely affect adjacent sensitive nontarget plants, apply this product by aircraft at a minimum upwind distance of 400 ft from sensitive plants.

SUGARCANE (Florida Only)
APPLICATION INSTRUCTIONS

<table>
<thead>
<tr>
<th>Metribuzin 4L</th>
<th>Remarks</th>
</tr>
</thead>
<tbody>
<tr>
<td>2 to 4</td>
<td>GROUND APPLICATION: Metribuzin 4L may be used in one or two applications with a minimum of 14 days between each application. Apply when weeds are less than 6 inches tall in 10 to 40 gallons of spray mixture per acre. POSTEMERGENCE BROADCAST OR BAND: Apply over the top of stubble or plant cane while sugarcane is less than 14 inches tall. POSTEMERGENCE DIRECTED SPRAY: Apply to sugarcane that is a minimum of 14 inches tall and before root closing.</td>
</tr>
<tr>
<td>2 to 3</td>
<td>AERIAL APPLICATION: Apply when weeds are less than 4 inches tall in 5 to 10 gallons of spray mixture per acre. Apply to stubble or plant cane while sugarcane is less than 14 inches tall.</td>
</tr>
</tbody>
</table>

METRIBUZIN 4L PLUS ATRAZINE TANK MIX: Metribuzin 4L may be used with atrazine as a preemergence or postemergence (before root closing) application to sugarcane. Rates for Metribuzin 4L are 1 1/2 to 2 lbs/acre and atrazine 80% WP (4L) are 2 1/2 to 5 lbs/acre (2 to 4 quarts/acre). For additional information on precautions, instructions, limitations, application, and weeds controlled, refer to this label and the atrazine label.

SPECIAL PRECAUTIONS (Florida only): Do not use more than 4 lb of atrazine per acre in a single growing season. Do not use on sand soils. Spray contact with sugarcane foliage may result in minor leaf margin chlorosis and/or necrosis. Do not apply within 60 days of harvest. Do not use treated crop for feed or forage. Avoid spray overlap or variation in application speed that may result in insufficient or excessive rates of application.

To assure that spray will not adversely affect adjacent sensitive nontarget plants, apply this product by aircraft at a minimum upwind distance of 400 ft from sensitive plants.

TO TOMATOES
Apply Metribuzin 4L herbicide with ground equipment to seeded or transplanted tomatoes as specified below under Application Instructions.

For effective control of grasses and broadleaf weeds with postemergence applications, apply Metribuzin 4L before weeds are 1-inch tall. Thorough spray coverage on weed foliage is essential for adequate control with postemergence applications. Do not use air blast or other high pressure spray equipment to make postemergence applications of Metribuzin 4L. Refer to the appropriate section of this label for additional information regarding spray equipment, dilution rates, mixing, sprayer cleanup, restrictions, container disposal and cautions.

For specific application information see the General Information section in the front of this label.

<td></td>
<td></td>
</tr>
</tbody>
</table>

**SPECIAL PRECAUTIONS (Tomatoes):** Do not apply more than a total of 2 pts Metribuzin 4L per crop season.

Do not apply the same area of directed sprays.

Allow at least 14 days between applications, regardless of dosage or method of application. Crop injury may occur during this interval. Do not apply within 3 days of harvest. Do not apply to tomatoes within 7 days after application of Metribuzin 4L. Do not treat seedling tomatoes until plants have reached the 5 to 6 leaf stage or severe crop injury may occur.

Crop injury or delayed maturity may result from broadcast or directed spray applications if tomatoes are growing under stress conditions such as periods of drought or cool, wet and cloudy weather preceding application.

For newly introduced tomato varieties with unknown tolerance to Metribuzin 4L, treat a small area to determine if Metribuzin 4L can be used without injury to the crop.

Aerial application is prohibited.

**DO NOT USE METRIBUZIN 4L ON TOMATOES IN KERN COUNTY, CALIFORNIA.**

**SPRING AND WINTER BARLEY AND WINTER WHEAT**

Metribuzin 4L herbicide is recommended for control of volunteer grasses and broadleaf weeds when applied postemergence to spring and winter barley or winter wheat. Metribuzin 4L alone and several tank mixture treatments are recommended for use in the following states: AL, AR, CA, ID, IL, IN, KS, KY, LA, MS, MO, MT, NV, OH, OK, OR, TN, TX, UT, WA.

**Mixing:** See the “General Information” section of this label for specific mixing procedures. When tank mixing, carefully follow the instructions on this label. Refer to the other product labels registered for use on barley and winter wheat for additional use directions, rates, weed controls, and restrictions.

**Application:** Metribuzin 4L may be applied by aerial or ground application equipment. Use a minimum spray volume of 2 gpa by air and 10 gpa by ground. Uniform spray coverage is necessary to obtain optimum weed control and to minimize potential for crop injury. Do not exceed rates specified on this label. Do not apply Metribuzin 4L through any type of irrigation equipment. Apply Metribuzin 4L when the crop is healthy and actively growing. Metribuzin 4L may be applied more than once per crop season.

Allow a minimum of 21 days between applications if wheat is actively growing or allow 45 days between applications if wheat is growing in adverse conditions, has entered dormancy or is stressed due to frost damage, disease, drought or excessive moisture. Do not use on soils containing less than 0.75% organic matter. Do not apply more than a total of 10 fluid ounces Metribuzin 4L (8 ounces active ingredient) per acre per year. On irrigated barley and barley, do not apply more than 0.5 inch of water for the first irrigation, the maximum amount for each additional irrigation should not exceed 1 inch. Allow a minimum of 14 days between the first irrigation and subsequent irrigations.

**Performance Factors:** Weed control may not be observed for 2 to 4 weeks under normal growth conditions and for 4 to 6 weeks under very dry conditions. Moisture (at least 1 inch) is required within 2 to 3 weeks after application to move Metribuzin 4L into the weed root zone. Lack of adequate moisture after application may result in poor or erratic weed control. Northern red and the black shank and other attacking weeds may depend on weed size at time of application. Control or suppression may be reduced if broadcast weeds are taller than 1 inch or grasses have more than 2 leaves.

**Tank Mixtures:** Metribuzin 4L may be tank mixed with Ally, Amber, Finesse, Glean FC, Harmony Extra, 2,4-D, MCPA, Icrap, BanvelBarvel SGR, Brait or Brait herbicides. A nonionic surfactant containing at least 20% active ingredient may be used in Metribuzin 4L tank mixes with sulfonylurea herbicides (Ally, Amber, Finesse, Glean FC and Harmony Extra). Do not use a crop oil concentrate or any other adjuvant containing vegetable or petroleum oils with any Metribuzin 4L mix as crop injury may occur. Additional pesticides may also be tank mixed with Metribuzin 4L unless specifically prohibited on the mix product's label. In some instances, combinations with organophosphate insecticides may cause temporary leaf yellowing and/or crop injury, especially when widely fluctuating day/night temperatures occur near application. Always refer to the other product labels registered for use on wheat and barley for additional instructions, rates and weed species controlled. Observe all precautions and labelings of all products used in mixture.

**Feeding Restrictions:** Do not graze wheat within 14 days of Metribuzin 4L application of oat or rye grain within 21 days of last application. Do not graze or harvest barley by crop maturity. For tank mix combinations, follow the most restrictive label.

**SPECIAL PRECAUTIONS:**

**Wheat and Barley Injury - Crop injury may occur if Metribuzin 4L is applied:**

- When the crop is under stress such as winter kill, frost damage, disease, drought or excessive moisture, severe grazing, or when these conditions follow the application.
- In combination with fluid fertilizers especially in the addition of surfactant.
- Prior to the growth stage specified on this label.
- To soils high in lime or sodium, a pH greater than 7.7, calcareous, grayly, sandy or exposed subsoil areas.
- To fields where wheat or barley weeds have been planted less than 1 inch deep.
- To a non-winter hardy barley or winter barley.
- To a sensitive wheat or barley variety as listed below.
- To frozen soil or crop still in winter dormant.

**Wheat and Barley Rotations Following Potatoes Treated with Metribuzin 4L:** If planting a sensitive wheat and barley variety (listed under the wheat and barley variety tolerance portion of this label), follow the potato section of the Metribuzin 4L label for specific cultural practices to follow.

**APPLICATION INSTRUCTIONS**

Metribuzin 4L alone or in a tank mix with labeled broadleaf herbicides may be applied by aerial or ground spray equipment as a broadcast postemergence spray.

**POSTEMERGENCE BROADCAST APPLICATION INSTRUCTIONS FOR METRIBUZIN 4L**

<table>
<thead>
<tr>
<th>CROP GROWTH STAGE</th>
<th>SOIL TEXTURE</th>
<th>METRIBUZIN 4L RATE (II cuA)</th>
<th>% ORGANIC MATTER</th>
</tr>
</thead>
<tbody>
<tr>
<td>Leaf</td>
<td>Coarse</td>
<td>0.75 to 2.0</td>
<td>OVER 5.0</td>
</tr>
<tr>
<td>To</td>
<td>Medium</td>
<td>1.5 to 4.5</td>
<td>5 to 4.5</td>
</tr>
<tr>
<td>Tiller</td>
<td>Fine</td>
<td>3.0 to 4.5</td>
<td>3 to 4.0</td>
</tr>
</tbody>
</table>

Use these rates on crops with secondary roots smaller than 1 inch. For dryland winter wheat (nonirrigated), apply the highest specified rate to achieve maximum weed suppression control.

- 3 Tiller
  - Coarse: 4.5 to 9
  - Medium: 6 to 7.5
  - Fine: 7.5 to 9

- 4 Tiller
  - Coarse: 6 to 9
  - Medium: 7.5 to 12
  - Fine: 10 to 16

Do not apply within 2 weeks after grazing of breaking of winter dormancy. Apply after the crop is at or beyond the 3 tiller growth stage but before jointing. Secondary roots should be developed and larger than 1 inch long. Do not apply before 75 days after planting.

For dryland winter wheat (nonirrigated), apply the highest specified rate to achieve maximum weed suppression control.

**GEORGIA ONLY:** Wheat must be planted before November 15 in the Piedmont area and Northern part of the state, and before December 1 in the Coastal Plain area.

**WHEAT AND BARLEY VARIETAL TOLERANCE**

- Wheat and barley varieties vary in their tolerance to Metribuzin 4L. Varieties below are listed and are recommended for use with Metribuzin 4L.

- **Wheat Varieties:** Abc, Adonis, Barley, Clark, Commanche, Hanner, Hector, Hick, Hudson, Lud, Ludder, Kaniak, Klages, Olympic, Picket, Staple and Triumph.

- **Barley Varieties:** Advance, Avery, Clark, Commanche, Hanner, Hector, Hick, Hudson, Lud, Ludder, Kaniak, Klages, Olympic, Picket, Staple and Triumph.
METRIBUZIN 4L
EPA REG. NO. 34704-990

Do not use the following wheat and barley varieties which are sensitive to Metribuzin 4L:

Spring/Durum Wheat: Avoid use on Spring wheat and Durum wheat varieties.

Barley: Glenn, Morex, Moravlan 3, Larker, Summit, Brock, Anheuser Bush B2601 and varieties with Morex parentage.

Varieties Not Listed: To avoid possible crop injury on any variety not mentioned in this label, contact a Local Products representative or herbicide expert for a variety recommendation prior to treatment or treat a small strip of the unlisted variety with the specified Metribuzin 4L rate to ascertain crop injury before treating an entire field.

* Abbreviated names of varieties: AS (Agresco), AT (Agritex), DB (Dienkro Bros), FS (Growmark FS), PI (Pioneer), PER (Hytteltech), SC (J.M. Schultz), TE (Terra), and TR (Terra).

Woods Controlled

Used at specified rates, Metribuzin 4L will control many annual broadleaf weeds. Control is best when applied to young, actively growing weeds. Weeds controlled by Metribuzin 4L include:

- Birthroot
- Catch-corn (can be)
- Catchweed (madwort)
- Chickweed, common
- Chickweed, mouse ear
- Corncockle
- Dogfennel (mayweed)
- Evening primrose (cutleaf)
- Fat leaf, small headed
- Field dock, tar weed
- Filaree, red stem
- Geranium, Carolina
- Good man, spp.
- Herbit

Woods Suppressed

Metribuzin 4L control of the following weeds varies from poor to excellent depending on time of application, stage of growth at application, temperatures and soil moisture conditions following treatment. For maximum effect on these weeds, apply the highest specified rate at the earliest growth stage timing for each particular soil type and organic matter. Suppression is a reduction in weed size and growth as compared to a non-treated area in the same field.

BROADLEAVES

- Buckwheat, wild
- Buttercup, spp.
- Cucurbitaceae Kochia
- Lettuce, prickly

GRAASSES

- Barley, hare (wild)
- Barley, little
- Black grass
- Blue grass, annual
- Blue grass, bulbous
- Brome, downy
- Brome, Japanese

* Use the highest specified Metribuzin 4L rate for maximum weed suppression.

FOR WEED CONTROL IN A WHEAT/FALLOW WHEAT ROTATION

Metribuzin 4L may be applied to provide weed control during the fallow period after wheat harvest or in the Spring before wheat is planted. Winter wheat can be seeded 4 months (120 days) after Spring application. Mechanical tillage or the application of a contact herbicide may be required to control weeds germinating prior to seeding of winter wheat. Best results will be obtained when straw and chaff are evenly distributed across the field.

For specific application information see the General Information section in the front of this label.

Where weed growth is present at application time, Metribuzin 4L should be applied with Gramoxone, Roundup, or other contact herbicide. Refer to the other product label registered for additional directions, rates, and weed species controlled. Do not plant crops in treated areas earlier than 10 months following Fall applications. Do not rotate any crop not listed on this label for 18 months following application of Metribuzin 4L.

Weeds Controlled

**BROADLEAVES**

- Chickweed, common
- Chickweed, common
- Chickweed, mouse ear
- Corncockle
- Kochia
- Lambquarter
- Mustard, blue or purple
- Mustard, Jim hill
- Pigweed
- Russian thistle
- Sunflower

**GRAASSES**

- Cattail grass
- Downy Brome
- Dendro (Bromus tectorum)
- Foxtail, Green
- Juncus viridis

* Note: Since control of these weeds may vary depending on moisture following application, use the higher rate specified below.

After Harvest Application (Fall Fallow): Metribuzin 4L may be applied to wheat stubble after harvest in the Fall. Apply 1 to 1 1/4 pt per acre broadcast before weeds emerge. Use higher rate for longer weed control or for weeds designated as requiring higher rate for control. Rainfall (1/2 inch or more) is necessary for herbicide activation.

Do not plant crops in treated areas for at least 10 months following Fall applications. Do not rotate any crop not listed on this label for 18 months following application of Metribuzin 4L.

Metribuzin 4L may be applied at 1 to 1 1/4 pt per acre as directed above for a Fall application. If other vegetation is present at the time of application use a contact herbicide.

Spring Application (Summer Fallow): Metribuzin 4L may be applied to wheat stubble in the Spring. Apply 3/4 to 1 pt per acre broadcast before weeds emerge in the Spring. Use higher rate for longer weed control or weeds designated as requiring higher rate for control. Rainfall (1/2 inch or more) is necessary for herbicide activation.

Precautions and Restrictions: Do not graze treated fields. Do not plant Spring seeded barley following Fall fallow applications of Metribuzin 4L. Where Metribuzin 4L was applied in the Fall, do not apply Metribuzin 4L in the Spring.

FOR WEED CONTROL IN A FALLOW ROTATION WITH BARLEY AND WHEAT

Metribuzin 4L may be applied to provide weed control during the fallow period after wheat or barley harvest or in the Spring before planting of Winter wheat or barley. Mechanical tillage or the application of a contact herbicide may be required to control weeds germinating prior to seeding of Winter wheat or barley.

For specific application information see the General Information section in the front of this label.

Where weed growth is present at application time, Metribuzin 4L should be applied with Gramoxone, Roundup, or other contact herbicide. Refer to the other product label registered for additional directions, rates, and weed species controlled. Do not plant crops in treated areas earlier than 10 months following Fall applications. Do not rotate any crop not listed on this label for 18 months following application of Metribuzin 4L.

METRIBUZIN 4L
EPA REG. NO. 34704-990

AFTER HARVEST APPLICATION (Fall Fallow): Metribuzin 4L may be applied to the stubble after harvest in the Fall. Apply 1-1/4 to 1-1/2 pt per acre broadcast before weeds emerge. Use the higher rate for longer weed control or for weeds designated as requiring the higher rate for control. Rainfall (1/2 inch or more) is necessary for herbicide activation.

SPRING APPLICATION (Summer Fallow): Metribuzin 4L may be applied to the stubble in the Spring. Apply 3/4 to 1 pt per acre broadcast before weeds emerge in the Spring. Use the higher rate for longer weed control or for weeds designated as requiring the higher rate for control. Rainfall (1/2 inch or more) is necessary for herbicide activation. Wheat or barley can be seeded 120 days after Spring application.

Precautions and Restrictions: Do not graze treated fields. Do not plant Spring seeded barley following fall applications for fallow. Where Metribuzin 4L was applied in the Fall, do not apply Metribuzin 4L in the Spring.

8 Months
Barley | Peas | Lentils | Wheat |

12 Months | Potatoes | Rice |

18 Months | Sugar Beets, Onions and other root crops not listed on this label, and all other crops not listed on this label.

1 Cover crops for soil building or erosion control may be planted anytime, but do not graze or harvest for food or feed. Stand reductions may occur in some areas.
2 Following peas, lentils or soybeans.

Do not rotate rice after any application to a primary crop greater than 1.0 lb/a of Metribuzin 4L per season.

Do not rotate any crop not listed on this label after application of Metribuzin 4L to sugarcane.

CONDITIONS OF SALE AND LIMITATION OF WARRANTY AND LIABILITY
BEFORE BUYING OR USING THIS PRODUCT, read the entire Directions for Use and the following Conditions of Sale and Limitation of Warranty and Liability. By buying or using this product, the buyer or user accepts the following Conditions of Sale and Limitation of Warranty and Liability, which no employee or agent of LOVELAND PRODUCTS, INC. or the seller is authorized to vary in any way.

Follow the Directions for Use of this product carefully. It is impossible to eliminate all risks inherently associated with the use of this product. Crop or other plant injury, ineffectiveness, or other unintended consequences may result from such risks as weather or crop conditions, mixture with other chemicals not specifically identified in this product's label, or use of this product contrary to the label instructions, all of which are beyond the control of LOVELAND PRODUCTS, INC. and the seller. The buyer or user of this product assumes all such inherent risks.

Subject to the foregoing inherent risks, LOVELAND PRODUCTS, INC. warrants that this product conforms to the chemical description on the label and is reasonably fit for the purposes stated in the Directions for Use when the product is used in strict accordance with such Directions for Use under normal conditions of use. EXCEPT AS WARRANTED IN THIS LABEL, THIS PRODUCT IS SOLD AS IS TO THE EXTENT ALLOWED BY APPLICABLE LAW. LOVELAND PRODUCTS, INC. MAKES NO OTHER WARRANTY, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, OR ELIGIBILITY OF THIS PRODUCT FOR ANY PARTICULAR TRADE USAGE.

IN THE UNLIKELY EVENT THAT BUYER OR USER BELIEVES THAT LOVELAND PRODUCTS, INC. HAS BREACHED A WARRANTY CONTAINED IN THIS LABEL, BUYER OR USER MUST SEND, TO THE EXTENT REQUIRED BY APPLICABLE LAW, WRITTEN NOTICE OF SUCH CLAIM TO THE FOLLOWING ADDRESS: LOVELAND PRODUCTS, INC., ATTENTION: LAW DEPARTMENT, 7251 WEST 4TH STREET, GREELEY, CO 80634.

TO THE EXTENT ALLOWED BY APPLICABLE LAW, THE BUYER’S OR USER’S EXCLUSIVE REMEDY FOR ANY INJURY, LOSS, OR DAMAGE RESULTING FROM THE HANDLING OR USE OF THIS PRODUCT, INCLUDING BUT NOT LIMITED TO CLAIMS OF BREACH OF WARRANTY OR CONTRACT, NEGLIGENCE, STRICT LIABILITY, OR OTHER TORTS, SHALL BE LIMITED TO ONE OF THE FOLLOWING, AT THE ELECTION OF LOVELAND PRODUCTS, INC. OR THE SELLER: DIRECT DAMAGES NOT EXCEEDING THE PURCHASE PRICE OF THE PRODUCT OR REPLACEMENT OF THE PRODUCT, TO THE EXTENT ALLOWED BY APPLICABLE LAW. LOVELAND PRODUCTS, INC. AND THE SELLER SHALL NOT BE LIABLE TO THE BUYER OR USER OF THIS PRODUCT FOR ANY CONSEQUENTIAL, SPECIAL, OR INDIRECT DAMAGES, OR DAMAGES IN THE NATURE OF A PENALTY.
