For growth management, quality improvement, and edging and banding applications to reduce trimming requirements of perennial turfgrasses on golf courses.

Active Ingredients
- flurprimidol: $\alpha$-(1-methylethyl)$\alpha$-[4-(trifluoromethoxy)phenyl]-5-pyrimidinemethanol ................. 13.26%
- trinexapac-ethyl: 4-(cyclopropyl-alpha-hydroxymethylene)-3,5-dioxo-cyclohexanecarboxylic acid ethyl ester.......................................................... 5.00%

Other Ingredients ............................................................................................................................ 81.74%
TOTAL ............................................................................................................................................ 100.00%

Contains 1.10 pounds of flurprimidol per gallon of product.
Contains 0.41 pound of trinexapac-ethyl per gallon of product.

KEEP OUT OF REACH OF CHILDREN
WARNING/AVISO

Si usted no entiende la etiqueta, busque a alguien para que se la explique a usted en detalle.
(If you do not understand the label, find someone to explain it to you in detail.)

SPECIALTY CHEMICAL: Do not ship or store with food, feeds, drugs or clothing.

Refer to label booklet for additional Precautionary Statements and Directions for Use, including First Aid and Storage and Disposal.

Notice: Read the entire label before using. Use only according to label directions. Before buying or using this product, read Warranty Disclaimer and Misuse statements in label booklet. If terms are unacceptable, return at once unopened.

### FIRST AID

| If in eyes | • Hold eye open and rinse slowly and gently with water for 15 - 20 minutes.  
|            | • Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.  
|            | • Call a poison control center or doctor for treatment advice. |
| If swallowed | • Call a poison control center or doctor immediately for treatment advice.  
|            | • Have person sip a glass of water if able to swallow.  
|            | • Do not induce vomiting unless told to do so by a poison control center or doctor.  
|            | • Do not give anything by mouth to an unconscious person. |
| If on skin or clothing | • Take off contaminated clothing.  
|            | • Rinse skin immediately with plenty of water for 15 - 20 minutes.  
|            | • Call a poison control center or doctor for treatment advice. |
| If inhaled | • Move person to fresh air.  
|            | • If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably mouth-to-mouth if possible.  
|            | • Call a poison control center or doctor for further treatment advice. |

### HOTLINE NUMBER

Have the product container or label with you when calling a poison control center or doctor, or going for treatment. In case of emergency endangering health or the environment involving this product, call INFOTRAC at 1-800-535-5053.

### PRECAUTIONARY STATEMENTS

#### HAZARDS TO HUMANS AND DOMESTIC ANIMALS

Warning. Causes substantial but temporary eye injury. Harmful if swallowed. Do not get in eyes or on skin or clothing. Harmful if inhaled. Avoid breathing spray mist. Wear protective eyewear and chemical-resistant gloves. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco, or using the toilet. Remove and wash contaminated clothing before reuse.
PERSONAL PROTECTIVE EQUIPMENT (PPE)
Applicators and other handlers must wear:
• Long-sleeved shirt and long pants
• Shoes plus socks
• Chemical-resistant gloves (including nitrile, butyl rubber, neoprene, or barrier laminate)
• Protective eyewear

User Safety Requirements
Follow manufacturer’s instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry. Discard clothing and other absorbent materials that have been drenched or heavily contaminated with this product’s concentrate. Do not reuse them.

USER SAFETY RECOMMENDATIONS
Users should:
• Remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
• Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

ENVIRONMENTAL HAZARDS
Do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. Do not contaminate water when cleaning equipment or disposing of equipment washwater or rinsate.

Ground Water Advisory
This pesticide has properties and characteristics associated with chemicals detected in ground water. This chemical may leach into ground water if used in areas where soils are permeable, particularly where the water table is shallow.

Surface Water Advisory
This product is classified as having potential for reaching surface water via runoff for several months or more after application. A level, well-maintained vegetative buffer strip between areas to which this product is applied and surface water features including ponds, streams, and springs, will reduce the potential loading of flurprimidol from runoff and sediment.

DIRECTIONS FOR USE
It is a violation of Federal Law to use this product in a manner inconsistent with its labeling. Read all directions for use carefully before applying. Use only according to label directions.
NON-AGRICULTURAL USE REQUIREMENTS
The requirements in this box apply to uses of this product that are not within the scope of the worker protection standard for agricultural pesticides (40 CFR part 170).

The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries, or greenhouses.

Do not enter treated area without footwear until sprays have dried.

AVOIDING INJURIOUS SPRAY DRIFT
Apply only when there is little or no hazard for spray drift. Very small quantities of spray, which may not be visible, may seriously injure susceptible plants. Do not spray when wind is blowing toward desirable susceptible crops or ornamental plants near enough to be injured. Avoiding spray drift at the application site is the responsibility of the applicator. The interaction of many equipment and weather related factors determine the potential for spray drift. The applicator is responsible for considering all these factors when making decisions.

PRODUCT INFORMATION FOR GROWTH REGULATION OF PERENNIAL TURFGRASSES
Legacy integrates patented† synergy of turf growth regulator technology for use on both warm and cool-season perennial turfgrasses on golf courses. It reduces stem elongation and leaf blade length in perennial turfgrasses resulting in a more compact and dense growth form. Growth regulation results from suppression of the plant hormone, gibberellic acid (GA), responsible for cell elongation in most plants.

Legacy’s patented site of action plant growth regulator (PGR) synergy results in growth suppression, improved turfgrass color and quality, extended spray intervals, and suppression of Poa annua. Plant physiological advantages to applications of this product include:

1. Multiple plant sites of uptake: Legacy is absorbed by plants via roots, stems, and leaves; and
2. Multi-site activity within gibberellic acid (GA) biosynthesis pathway: Legacy inhibits GA production at both early and late stages in the pathway.

Turf growth regulator absorption via the roots and foliage allows for more efficient uptake by the plant ensuring an optimal amount of active ingredient is available for GA inhibition. Additionally, blocking GA biosynthesis early and late in the biological pathway regulates GA more efficiently than at a single site within this cycle.

†The synergy derived from the combination of Type II Class A and Type II Class B PGRs is protected by United States Patent No. 7,135,435 and 9,198,417.

Make broadcast treatments on medium to high quality turfgrass areas. Follow an appropriate fertility program for the desired turf species in conjunction with Legacy applications to provide the best turfgrass enhancement and reduce potential for discoloration.

Benefits of Legacy Applications to Turfgrass
• Shoot growth suppression of warm and cool season turfgrasses resulting in decreased mowing frequency and turfgrass clippings.
• Increased turfgrass density, wear resistance, and improved color on warm and cool season turfgrass species resulting in improved turf quality.
• Suppression of *Poa annua* (annual bluegrass) in cool-season turfgrasses.
• Improved water use efficiency of warm and cool season turfgrass resulting in pre-drought stress conditioning.

**NOTICE TO USER:** Turfgrass responses to Legacy may vary within turfgrass species due to the large number of cultivars and varieties available. Neither the manufacturer nor seller has determined if this product can be used safely or effectively on turfgrass species not mentioned on this label. For turfgrass species not listed on this label the SePRO recommends applying this product to a small test area to determine growth response and desired level of growth regulation prior to large scale applications.

### Use Restrictions for Perennial Turfgrasses
- **DO NOT** use on turf being grown for sale or other commercial use as sod, or for commercial seed production or for research purposes.
- **DO NOT** apply to bermudagrass putting greens or overseeded bermudagrass putting greens.
- **DO NOT** apply to shrubs, bedding plants, and/or food plants.
- **DO NOT** use on turfgrasses under stress due to temperature and moisture extremes and disease, and/or insect pressures.
- Delay applications to newly seeded turfgrasses until turf is well established and actively growing.
- **DO NOT** apply until 6 to 8 weeks after turfgrass sprigging or laying sod. Turfgrass must be well established and actively growing prior to application.
- **DO NOT** apply to a bentgrass or annual bluegrass putting green within 8 weeks of conversion to bermudagrass, zoysiagrass, or seashore paspalum turf.
- **DO NOT** apply to saturated soils or when a significant moisture event is anticipated.
- **DO NOT** apply to turf used for livestock production.
- Multiple applications of Legacy can be made yearly, but do not apply more than 350 fl oz/A (3 lbs flurprimidol per acre) of Legacy per year.
- **Chemigation:** **DO NOT** apply Legacy through any type of irrigation system.

**Note:** Additional turfgrass growth regulation may occur when Legacy is tank mixed or used in conjunction with demethylation inhibitor (DMI) or sterol inhibiting fungicides.

### Application Timing
For best results, apply to actively growing turfgrass. Make Spring applications after resumption of active seasonal growth of turfgrass. Schedule the final application of the season a minimum of 4 weeks before the onset of inactive grass growth or winter dormancy. Apply to overseeded turfgrasses in dormant bermudagrass stands 4 weeks prior to expected bermudagrass green-up.

### Irrigation
Best results are obtained if rainfall or irrigation occurs no sooner than 2 hours after application or until product has dried on the leaf surface but within 24 hours after application. Avoid mowing turfgrass areas treated with Legacy until after rainfall or irrigation occurs.

### Turf Color and Post Treatment Turf Management
Treated turfgrass may appear darker green in color. This color change, which appears 1 to 2 weeks after treatment, may persist an additional 3 to 6 weeks. Manage treated areas to encourage the growth of a healthy vigorous turf.
APPLICATION DIRECTIONS

Mixing Directions
Add Legacy to a spray tank half filled with clean water while agitating. Allow sufficient mixing time to ensure consistent mixing of this product. Finish filling the spray tank. Continue agitation throughout the spraying operation to ensure uniform application.

Legacy + Tank Mixtures
Legacy can be tank mixed and is compatible with most commonly-used pesticides and foliar nutrient products. However, test compatibility of this product with tank mix partners before use.

Mixing Notes
SePRO suggest using a coloring agent or foam to mark areas already sprayed for uniform application without skips and overlaps. Performance may be improved with the addition of a readily available nitrogen (N) source at 0.125 to 0.5 lbs N/1,000 ft² or iron (Fe) at suggested label rates to the spray mix.

Before use, test the compatibility of this product in any tank-mix combination. To determine the physical compatibility with other products, use a jar test as described below:

Using a quart jar, add the proportionate amounts of the products to 1 quart of water. Add wettable powders and water-dispersible granular products first, then liquid flowables, and emulsifiable concentrates last. After thoroughly mixing, let stand for at least 5 minutes. If the combination remains mixed or can be remixed readily, it is physically compatible. Once compatibility has been proven, use the same procedure sequence for adding required ingredients to the spray tank.

It is the pesticide user’s responsibility to ensure that all products are registered for the intended use. Read and follow the applicable restrictions and limitations and directions for use on all product labels involved in tank mixing. Users must follow the most restrictive directions for use and precautionary statements of each product in the tank mixture.

Application Notes
While this product may be applied with other application equipment, SePRO recommends applying this product using a boom-type sprayer with bypass and/or mechanical agitation calibrated to deliver 20 to 100 gallons/acre of spray solution (0.5 to 2.5 gallons/1,000 ft²). In-line strainers and nozzle screens must be 50 mesh or larger.

REDUCING GROWTH OF PERENNIAL TURFGRASS SPECIES
A multiple application program using Legacy provides growth reduction of perennial turfgrass species resulting in decreased mowing frequency and turfgrass clippings. For cool-season grasses, begin initial applications in early spring following resumption of active growth. For warm-season grasses, begin initial applications when the grass has completely recovered from winter dormancy and is growing vigorously. For both warm and cool-season grasses, discontinue applications a minimum of 4 weeks before the onset of inactive grass growth or winter dormancy. Use lower rate range in early spring and late fall applications to avoid excessive growth regulation. Refer to Table 1 for rates for growth regulation of perennial turfgrass species.

† For perennial ryegrass overseeded fairways, delay applications until perennial ryegrass is well established (3 to 4 weeks after germination). Make final spring application a minimum of 4 weeks prior to expected bermudagrass green-up.

†† Use higher rate ranges for perennial turfgrass species maintained at higher mowing heights.

††† Use lower rate ranges during early spring or late fall when turfgrass growth and vigor are reduced.

**CONVERTING POA ANNUA (ANNUAL BLUEGRASS) TO PERENNIAL TURFGRASSES**

A growth regulation program using Legacy suppresses *Poa annua* in cool season turfgrasses. Research has demonstrated that programmed applications of this product are effective at suppressing *Poa annua* populations in cool-season turfgrasses when compared to formulations of trinexapac-ethyl which have shown to have minimal impact on reducing *Poa annua* populations. This program provides a gradual increase in cool-season turfgrass populations while reducing *Poa annua* populations over one to several growing seasons. Temporary initial discoloration of *Poa annua* is possible with aggressive rates of Legacy, especially during temperature extremes. To maximize seedling establishment during interseeding or overseeding practices, delay applications of this product 10 to 14 days prior to and/or after date of seeding. For more aggressive *Poa annua* conversion, consider programmed applications of Cutless 50W,Cutless MEC, or Musketeer at labeled rates and timings for the desired turfgrass species. Refer to Table 2 for rates for *Poa annua* suppression in cool-season turfgrasses using this product.
• Bentgrass (golf course fairway)

Apply Legacy for *Poa annua* suppression in fairway height bentgrass at a rate of 8 to 15 fl. oz./A in early spring following resumption of active growth of the grass. Repeat applications of 8 to 20 fl. oz. product/A at 2 to 6 week intervals until late summer or early fall. Consider using reduced rates of this product in bentgrass fairways with high populations of *Poa annua* or when temporary *Poa annua* discoloration cannot be tolerated. Normal management practices including fertilization, aeration and interseeding/overseeding will encourage growth of bentgrass.

• Bentgrass Putting Greens

Annual turfgrass species, including *Poa annua* are more strongly regulated by applications of Legacy often resulting in transitory yellowing or temporary discoloration. Therefore, use reduced rates of Legacy on bentgrass putting greens with high populations of *Poa annua* (>50%) or when temporary *Poa annua* discoloration cannot be tolerated. Over time, programmed applications of Legacy throughout the growing season will suppress *Poa annua* populations, resulting in increased populations of bentgrass. Follow normal management practices including fertilization, aeration and interseeding/overseeding that encourage growth of bentgrass. Use of Legacy on bentgrass greens may increase putting speed without reducing the height of cut.

  o **Bentgrass Greens with less than 50% *Poa annua* (Annual Bluegrass):** Apply Legacy to bentgrass as part of an overall greens management program both for growth regulation and *Poa annua* suppression. Make an initial application of 5 to 10 fl. oz. product/A in the spring months after bentgrass greens are growing vigorously and have been mowed 3 or 4 times. Repeat applications of 5 to 10 fl. oz. product/A at 2 to 4 week intervals through early fall.

  o **Bentgrass Greens with more than 50% *Poa annua* (Annual Bluegrass):** Apply Legacy to bentgrass as part of an overall greens management program both for growth regulation and *Poa annua* suppression. Make an initial application of 5 fl. oz. product/A in the spring months after bentgrass greens are growing vigorously and have been mowed 3 or 4 times. Repeat applications of 5 to 10 fl. oz. product/A at 2 to 4 week intervals through early fall.

• Kentucky bluegrass, Perennial ryegrass Mixtures

Apply Legacy for *Poa annua* suppression in fairway height Kentucky bluegrass and perennial ryegrass mixtures at a rate of 15 to 22 fl. oz. product/A in early spring following resumption of active growth of the grass. Repeat applications of 15 to 30 fl. oz. product/A at 2 to 6 week intervals until late summer or early fall. Consider reduced rates in Kentucky bluegrass, perennial ryegrass mixtures with high populations of *Poa annua* or when temporary *Poa annua* discoloration cannot be tolerated. Normal management practices including fertilization, aeration and interseeding/overseeding will encourage growth of bluegrass and/or ryegrass.

• Perennial ryegrass

Apply Legacy for *Poa annua* suppression in fairway height perennial ryegrass at a rate of 15 to 22 fl. oz. product/A in early spring following resumption of active growth of the grass. Repeat applications of 15 to 30 fl. oz. product/A at 2 to 6 week intervals until late summer or early fall. Consider reduced rates in perennial ryegrass with high populations of *Poa annua* or when temporary *Poa annua* discoloration cannot be tolerated. For bermudagrass fairways overseeded with perennial ryegrass, delay applications of Legacy until perennial
ryegrass is well established (3 to 4 weeks after germination). Final spring application must be made a minimum of 4 weeks prior to expected bermudagrass green-up. Normal management practices including fertilization, aeration and interseeding/overseeding will encourage growth of perennial ryegrass.

† Apply in early spring following resumption of active growth of the grass. Discontinue Fall applications 4 weeks before the onset of inactive grass growth or winter dormancy.

†† For perennial ryegrass overseeded fairways, delay applications until perennial ryegrass is well established (3 to 4 weeks after germination). Final spring application must be made a minimum of 4 weeks prior to expected bermudagrass green-up.

### SUPPRESSING DOLLAR SPOT (SCLEROTINIA HOMEOCARPA) IN CREEPING BENTGRASS

One of the active ingredients in Legacy is from the pyrimidine class of chemistry which is structurally similar to pyrimidine fungicides that provide Dollar Spot control. Programmed applications of Legacy for turf growth suppression or for slowing the encroachment of Poa annua have also been shown to suppress Dollar Spot incidence in creeping bentgrass fairways, greens and tees. Research results have shown that Legacy applications at labeled rates and application intervals can significantly reduce Dollar Spot incidence and populations when compared to untreated control plots. Do not use this product to replace labeled fungicides for the control of Dollar Spot; rather, programmed use of Legacy may result in longer or improved control of Dollar Spot in conjunction with conventional fungicides, or delays in the appearance of Dollar Spot disease, thus leading to the potential for an overall reduction in annual fungicide use.

### EDGING AND BANDING APPLICATIONS FOR GROWTH REGULATION OF PERENNIAL TURFGRASS SPECIES

Legacy can be applied to turfgrass in edging and banding applications along the perimeter of lawns, landscape beds, sidewalks, curbs, parking lots, driveways, posts, mailboxes, building structures, gravestones, fences and other similar areas. Apply Legacy in a 6 inch band width with a single nozzle sprayer. Repeat at 8 to 12 week intervals or as needed for turf growth regulation.

In order to deliver the correct rate of Legacy to the desired turf species, properly calibrate sprayers to determine spray volume in gallons per acre. Following proper calibration, use Table 4 to determine fluid ounces of Legacy per 1 gallon of water required to apply the targeted rate found in Table 3 at various spray volumes.

STORAGE AND DISPOSAL

DO NOT contaminate water, food or feed by storage or disposal.

Storage
Store in original container only. In case of leak or spill, contain material and dispose as waste.

Pesticide Disposal
Wastes resulting from the use of this product may be disposed of on-site or at an approved waste disposal facility.

Container Handling
Nonrefillable Container. DO NOT reuse or refill this container. Triple rinse or pressure rinse container (or equivalent) promptly after emptying; then offer for recycling, if available, or reconditioning, if appropriate, or puncture and dispose of in a sanitary landfill, or by incineration, or by other procedures approved by state and local authorities.

Triple rinse containers small enough to shake (capacity ≤ 5 gallons) as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container ¼ full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank, or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times.

Triple rinse containers too large to shake (capacity >5 gallons) as follows: Empty the remaining contents into application equipment or a mix tank. Fill the container ¼ full with water. Replace and tighten closures. Tip container on its side and roll it back and forth, ensuring at least one complete revolution, for 30 seconds. Stand the container on its end and tip it back and forth several times. Turn the container over onto its other end and tip it back and forth several times. Empty the rinsate into application equipment or a mix tank, or store rinsate for later use or disposal. Repeat this procedure two more times.

Pressure rinse as follows: Empty the remaining contents into application equipment or mix tank and continue to drain for 10 seconds after the flow begins to drip. Hold container upside down over application equipment or mix tank, or collect rinsate for later use or disposal. Insert pressure rinsing nozzle in the side of the container and rinse at about 40 PSI for at least 30 seconds. Drain for 10 seconds after the flow begins to drip.

FIRST AID
If in eyes • Hold eye open and rinse slowly and gently with water for 15-20 minutes.
• Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.
• Call a poison control center or doctor for treatment advice.
If swallowed • Call a poison control center or doctor immediately for treatment advice.
• Have person sip a glass of water if able to swallow.
• Do not induce vomiting unless told to do so by a poison control center or doctor.
• Do not give anything by mouth to an unconscious person.

If on skin or clothing • Take off contaminated clothing.
• Rinse skin immediately with plenty of water for 15-20 minutes.
• Call a poison control center or doctor for treatment advice.
If inhaled • Move person to fresh air.
• If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably mouth-to-mouth if possible.
• Call a poison control center or doctor for further treatment advice.

STORAGE AND DISPOSAL
DO NOT contaminate water, food or feed by storage or disposal.

Storage
Store in original container only. In case of leak or spill, contain material and dispose as waste.
Pesticide Disposal
Wastes resulting from the use of this product may be disposed of on-site or at an approved waste disposal facility.

Container Handling
Nonrefillable Container. DO NOT reuse or refill this container. Triple rinse or pressure rinse container (or equivalent) promptly after emptying; then offer for recycling, if available, or reconditioning, if appropriate, or puncture and dispose of in a sanitary landfill, or by incineration, or by other procedures approved by state and local authorities.
See attached booklet for complete container disposal directions including triple rinsing and pressure rinsing instructions.

HOTLINE NUMBER
Have the product container or label with you when calling a poison control center or doctor, or going for treatment. In case of emergency endangering health or the environment involving this product, call INFOTRAC at 1-800-535-5053.

Net Contents 1 gallon (Non-refillable)
