TEMPRID® SC Insecticide
Intended For Use by Pest Management Professionals and Commercial Use Only.
ACTIVE INGREDIENT:
Imidacloprid, 1-Di(3-chloro-2-pyridyl)methyl-3-(2,2-dichlorovinyl)-2,2-dimethyl-cyclopropane-carboxylic acid................18.5%
OTHER INGREDIENTS...............................................81.5%
100.0%
EPA Reg. No. 432-1483 EPA Est. No. 432-TX-1
STOP - Read The Label Before Use.
Keep out of reach of children.
CAUTION
PRECAUTIONARY STATEMENTS
HAZARDS TO HUMANS AND DOMESTIC ANIMALS
CAUTION
Harmful if absorbed through skin. Harmful if swallowed. Causes moderate eye irritation. Avoid contact with skin, eyes or clothing. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum or using tobacco. Wear long-sleeved shirt and long pants, socks, shoes, and gloves. Remove contaminated clothing and wash before reuse.
ENVIRONMENTAL HAZARDS
This pesticide is extremely toxic to wildlife, fish and aquatic invertebrates. Do not apply directly to water, to areas where surface water is present or to infertile areas below the mean high water mark. Drift and run-off from treated areas may be hazardous to aquatic organisms in neighboring areas. Do not contaminate water when dispersing of equipment wash waters. Care should be used when spraying to avoid fish and reptiles in or around ornamental ponds. This product is highly toxic to bees exposed to direct treatment or residues on blooming crops or weeds. Do not apply this product or allow it to drift to blooming crops if bees are visiting the treatment area.

FIRST AID

If on skin:
- Take off contaminated clothing.
- Rinse skin immediately with plenty of water for 15 to 20 minutes.
- Call a poison control center or doctor for treatment advice.

If in eyes:
- Hold eye open and rinse slowly and gently with water for 15 to 20 minutes.
- Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.
- Call a poison control center or doctor for treatment advice.

If swallowed:
- Call a poison control center or doctor immediately for treatment advice.
- Have person sip a glass of water if able to swallow.
- Do not induced vomiting unless told to do so by a poison control center or doctor.
- Do not give anything to an unconscious person.

Have the product container or label with you when calling a poison control center or doctor or going for treatment.

The Bayer Environmental Science Emergency Response Telephone No. is 1-800-334-7377.

Note To Physician: No specific antidote is available. Treat the patient symptomatically.

HAZARDS TO HUMANS AND DOMESTIC ANIMALS

CAUTION
Harmful if absorbed through skin. Harmful if swallowed. Causes moderate eye irritation. Avoid contact with skin, eyes or clothing. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum or using tobacco. Wear long-sleeved shirt and long pants, socks, shoes, and gloves. Remove contaminated clothing and wash before reuse.

ENVIRONMENTAL HAZARDS
This product is extremely toxic to wildlife, fish, and aquatic invertebrates. Do not apply directly to water, to areas where surface water is present or to intertidal areas below the mean high water mark. Do not run-off from treated areas may be hazardous to aquatic organisms in neighboring areas. Do not contaminate water when disposing of equipment wash waters. Care should be used when spraying to avoid fish and reptile pets in or around ornamental ponds. This product is highly toxic to bees exposed to direct treatment or residues on blooming crops or weeds. Do not apply this product or allow it to drift to blooming crops if bees are visiting the treatment area.

PRO FACTS

- Two modes of action: contact activity & systemic action
- Quick knockdown & residual control
- Low odor
- Non-staining
- No phytotoxicity on a wide range of ornamentals

Temprid® SC Insecticide
- Temprid SC Insecticide is a suspension concentrate formulation of two Insecticide active ingredients, imidacloprid and pyraclostrobin. One gallon of this product contains 2 lbs of imidacloprid and 1 lb of pyraclostrobin.
- Shake well before using.

PRO FACTS (Cont.)

Controls
- Indoor or General Household Pests
- Outdoor/Perimeter Pests
- Wood-boring Pests

Where To Apply
- Apply where pests have been seen or found, or can find shelter.
- In and around buildings and structures
- On established landscape ornamentals around residential and commercial properties

Dilution Rates
- When 0.27 fl oz (8 milliliters) is diluted in one gallon of water, the combined active ingredient concentration (0.075%) contains 0.05% imidacloprid and 0.025% pyraclostrobin.
- When 0.54 fl oz (16 milliliters) is diluted in one gallon of water, the combined active ingredient concentration (0.15%) contains 0.12% imidacloprid and 0.05% pyraclostrobin.

Mixing Information
- Mix the appropriate amount of Temprid SC Insecticide with water.
- Add product when filling spray tank with water, shake or agitate mixture.
- Diluted spray mixture can be stored overnight. Agitate before using.

How To Apply
- General surface (outdoors only), spot treatment, and void injections by mist, foam or crack & crevice sprays.
- Follow application to established landscape ornamentals.

Re-Apply
- Every 7 to 10 days, if needed.

Re-Entry
- Do not contact treated surfaces until dry.
- People and pets may re-enter after the treated area is dry.

Questions
For questions or comments, call toll-free 1-800-334-7377

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Do not formulate this product into other end-use products.

INDOOR PESTS

FOR RESIDUAL PEST CONTROL IN BUILDINGS, STRUCTURES, AND MACHINES OF TRANSPORT

Use Temprid SC Insecticide as a spot spray or crack and crevice treatments inside buildings and structures. This includes schools, factories, stores, warehouses, hospitals, food processing facilities (non-food/feed areas), and modes of transport. For a list of common facilities where this product may be used, see Appendix.

**Where To Apply**
- Treat where pests have been seen or found, or can be found.
- Use only as a spot spray or crack and crevice or void treatments inside buildings and structures.
- Treat entry points such as around water pipes, doors, windows, and eaves.
- Treat areas where pests normally feed or hide such as baseboards, corners, around water pipes, behind or under refrigerators, cabinets, sinks, and stoves.
- Mist or foam applications can be made behind viewers, piers, and chimney bases, into nubile foundations, into block walls or structural voids, wall voids, under slabs, shop, pantries, or to the soil in crawlspaces, and other similar visits.
- Spot treat floor or rugs beneath furniture, in closets, and storage areas, but do not apply to entire floor area.

**Use Rate**
- 0.075% -- 0.17 fl oz (0.44 mL) per gallon of water
- 0.15% -- 0.14 fl oz (0.2 mL) per gallon of water

**How To Apply**
- Remove or tightly cover fish tanks and disconnect water heaters during application.
- Keep people and pets away from areas of application until treated surfaces are completely dry.
- Do not contact treated surfaces until dry.
- Do not contact treated surfaces until treated.
- When treating overhead areas, wear safety glasses, goggles, or face shield and a dust/mist respirator.

**Spot Applications**
- Use a low-pressure system, (do not exceed 50 psi at nozzle tip) with a fan-type nozzle to apply the dilution uniformly.
- In the home, all food processing surfaces and utensils should be covered or thoroughly washed following treatment. Cover exposed food or remove from areas being treated.
- Spray, Mist, or Foam Crack and Crevice or Void Applications:
  - Spray, mist, or foam directly into cracks and crevices or voids where pests or their nests are present. Apply the volume of spray, mist, or foam sufficient to cover the area.
  - Spray a low-pressure system, (do not exceed 50 psi at nozzle tip) with a pinpoint, or variable pattern nozzle, or applicator equipment that delivers low volume treatments.
  - Mist Use appropriate mist generating equipment. Do not allow mist to drift out of void spaces into commonly occupied areas of the structure.

**Crawling Insects**
- Use a fume or low-pressure spray (do not exceed 50 psi at nozzle tip).
- Treat entry points such as around water pipes, doors, windows, and eaves. Treat areas where pests normally feed or hide such as baseboards, corners, around water pipes, under refrigerators, cabinets, sinks, and stoves, being sure to spray cracks & crevices. Spot treat floor or rugs beneath furniture, in closets, and storage areas, but do not apply to entire floor area.
- For more difficult to control pests, like certain spiders, direct contact spray is required for effective control.

**When To Apply**
- When pests are seen or found.
- Re-apply every 7 to 10 days if needed.

**Restrictions**
- Do not apply in food/feed areas of food and feed handling establishments.
- Do not apply broadcast treatments to floors or floor coverings.
- Do not apply in hospital and/or nursing home rooms while they are occupied.
- Do not apply in classrooms while they are occupied.
- Do not apply as a space spray.
- Do not allow excessive dripping or run-off to occur from vertical or overhead surfaces.
- Do not apply where electrical short circuits can occur; use a dust or dry bait in these areas.
- Do not apply to furniture or upholstery where prolonged contact with humans will occur.
- Do not spray bed linens or other materials which come in direct contact with occupants of the bed.

**APPLICATION FOR INDOOR PESTS**

**Bed bugs**
- Use a fume or low-pressure spray (do not exceed 50 psi at nozzle tip).
- Treat beds, mattresses, wall, and ceiling to bed, including all cracks and joints.
- When bed bugs are found in upholstered furniture, apply only to the infested tufts, seams, voids, and edges, but do not apply to flat surfaces where prolonged contact will occur.
- Apply in bedframes, bases, and the interior of bed frames or headboards, including all cracks and joints.
- Apply a crack and crevice treatment to all baseboards, moldings, beneath floor coverings, and carpet, closets, shelves, curtains, furniture and picture frames that may provide harborage to bed bugs.
- Re-apply every 7 to 10 days, as needed, until infestation is eliminated.
APPLICATION FOR INDOOR PESTS (Cont)

Ants
Apply to ant trails on walls, tile, baseboards, around pipes, under cabinets, and other places where ants are active. Treat entry points such as windows, doors or sites where utilities enter the structure; also see directions for use in Outdoor/Perimeter Pest section. Treat nests when possible.

Listed Flying Insects
Apply to surfaces where pests collect or rest.

OUTDOOR/PERIMETER PESTS

Ants
Blue or Green Bottle flies
Cockroaches
Cockroaches

Blister flies
Brower bugs
Earwigs

Where To Apply
• Apply to surfaces on buildings, patios, patios and other structures, around doors and windows, sashes and attic vents, utility entry points, soffit areas and other exterior openings (including foundation cracks or drilled holes) where these pests enter the structure or where they have been seen or found, or can find shelter.
• To prevent infestation, treat the outside of the structure, to include walls to a height of 2 to 3 feet, around doors, windows, and soffits where pests are active or may enter or hide. Treat the soil, turf or other ground covering adjacent to the structure (in a band up to 10 feet wide) where pests are seen, have been found, or can find shelter.
• In ant management programs, apply to flower, shrub or ornamental plant beds where ants may find food or forage.

Use Rate
• 0.075% -- 0.27 fl oz (8 milliliters) per gal of water
• 0.15% -- 0.54 fl oz (16 milliliters) per gal of water
• Always use the 0.15% rate for fire ants, hornets, wasps and yellow jackets.

How To Apply (also see Applications For Outdoor/Perimeter Pest)
• Apply enough dilution to adequately cover the area without excessive dripping or run-off. Volume can vary depending on the surface type treated. For example, mulch requires more spray than bare soil.
• For high volume applications, Temprid SC Insecticide may be diluted at lower concentrations and applied in greater volumes of water.
• When treating overhead areas, wear safety glasses, goggles, or face shield and a dust/mist respirator.
• Do not contact treated surfaces until dry.

APPLICATION FOR OUTDOOR/PERIMETER PESTS

When To Apply
• When pests are seen or found
• Re-apply every 7 to 10 days if needed.

OUTDOOR/PERIMETER PESTS (Cont)

Arts
Locate and treat ant nests, if possible. Follow trails of foraging workers, check under objects near the structure, and inspect other likely nest sites. If ants are nesting in the soil, thoroughly drench or inject the nest and surrounding soil. Treat ant trails around windows and doors, along sidewalks, or any other area where seen. Apply a perimeter treatment as described above.

Temprid SC Insecticide contains a systemic insecticide (imidacloprid), so follow application to landscape ornamentals provide local systemic control of aphids, scale insects, and other plant-feeding insects and limit the production of honeydew an important food source for ant populations.

Apply a very light mist of the dilute spray, and do not allow excess run-off. Treat thoroughly for good coverage including the underside of leaves as these pests often feed or nest there.

Aerial Baits: If ant nests are located in tree hollows or non-structural wooden construction (e.g., posts, fences, decks) treat the interior cavity and/or the nest site by injecting a spray, mist, or sufficient volume of foam.

It is recommended to remove or prune away any shrubs, bushes, and tree branches touching the structure. Vegetation touching the structure may offer a route of entry for ants into the structure. This may allow ants to inhabit the structure without coming in contact with the treatment.

Hornets, wasps, and yellow jackets
Use Rate: 0.15% -- 0.54 fl oz (16 milliliters) of Temprid SC Insecticide per gal of water.
Make pit stream applications directly to the nests. To help avoid stings treat nests in the evening when the insects are inside the nest. Remove and destroy treated nests to prevent emergence of newly-hatched insects. If removal is not possible, relocate nests if necessary.

Occasional invaders
Brower bugs, elm leaf beetles, and other listed pests
Apply directly to insects that have congregated around doors and windows and similar areas where they may enter structures. Apply perimeter treatment as described above.
For best results, treat infested tree and shrub early in the season. Tree spraying may require ornamental license – check with your local regulator.

Centipedes, millipedes, pill bugs, saw bugs, springtails, etc.
Apply perimeter treatment to reduce the number of insects from entering the structure. Thoroughly treat mulched areas. Correcting moisture problems around the structure will reduce pest pressure.

**APPLICATION FOR OUTDOOR/PERIMETER PESTS (Cont)**

<table>
<thead>
<tr>
<th>Fire Ants</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Use Rate: 0.15% - 0.30% (5-10 million of Termiticide per gal of water)</strong></td>
</tr>
<tr>
<td><strong>Thoroughly drench or inject the entire mound. When using injection treatment, you must treat the bottom of the mound. Apply dilution or foam using a downward and upward motion of the injector tool. For complete distribution, inject in several points throughout the mound. Treat new mounds as they appear.</strong></td>
</tr>
<tr>
<td><strong>Do not use in pastures or areas of food crop production.</strong></td>
</tr>
</tbody>
</table>

**Fleas & ticks** *(including ticks that may transmit Lyme Disease and Rocky Mountain Spotted fever)*

- **For fleas:** treat likely harborage areas like along paths, tall grass and other vegetation. For fleas, concentrate treatments in areas where pets are known to rest, as these areas are largest providing hot spots.
- **For ticks:** treat the entire area where these could be present. Fleas and ticks may be reintroduced from surrounding areas by host animals.

**House flies and Cluster flies**

- Apply low-volume mist or spray to outside surfaces of buildings, porches, patios, garages, fences, and other areas where house flies rest.
- **Cluster flies:** treat in late summer or fall, just before cluster flies begin looking for winter shelter. Spray siding, screens around windows and doors, window screens, and attic. To help reduce infestations, treat cracks and crevices, attic and other indoor winter hiding places.

**Mosquitoes**

- Treat with spray or mist around landscape plants, turf and ground cover, under decks, around building foundations and other places where mosquitoes may rest.

**Scorpions**

- Treat around piles of firewood and other areas where scorpions may hide. When possible, remove piles of materials that can harbor the pests. Apply a perimeter treatment. Do not treat firewood with this product.

**WOOD-INFESTING PESTS**

</tbody>
</table>

**WOOD-INFESTING PESTS (Cont)**

**Application for wood-infecting pests**

- **Drywood termites & wood-infecting beetles**
  - **Galleries and structure voids:** treat by applying sprays, mists, or foams. Locate galleries by using visual signs (frass or pellets, blistered wood, emergence or clean out holes), the presence of live insects, mechanical sounding techniques, or listening devices (e.g., stethoscopes, acoustic emission detectors). Proceed to the gallery system by drilling holes to receive the insecticide treatment tool. Distribute drill holes to adequately cover the gallery system. Apply as a low pressure spray (do not exceed 50 psi at nozzle tip) or by misting or where appropriate, by foaming. It is not necessary to treat to the point where runoff is detected from adjacent holes.
  - **Avoid drilling where electrical wiring, plumbing lines, etc. are located.**
  - **Drill holes in commonly occupied areas must be sealed after treatment.**
  - **Avoid drilling where electrical shock hazards exist.**
  - **Drill holes in commonly occupied areas must be sealed after treatment.**
  - **Avoid drilling where electrical shock hazards exist.**

**Wood surfaces**

- Treat by spray or mist or, where appropriate, foam applications. For inaccessible surfaces, drill and treat the interior of structural voids. Surfaces treated may include exposed wooden surfaces in crawlspaces, basements, or attics; wooden exterior surfaces such as decks, fences, or siding; structural voids, chimneys in damaged wood, or spaces between wooden members of a structure, and junctions between wood and foundations. Apply by brushing or by a coarse, low pressure spray (do not exceed 50 psi at nozzle tip) to the wood surface. Apply sufficient volume to cover the surface to the point of wetness, but avoid applying to the point of runoff.

**Carpenter ant**

- **Homes and other structures:** apply around doors and windows and other places where carpenter ants may enter. Spray or foam into cracks and crevices, or spray, mist or foam through small drilled holes into voids where ants or nests are present. Use enough spray or foam to cover the area.

**Termite** (soil applied)

- **As soil drench or inject the dilution or foam in the soil at intervals of 6 to 12 inches. Use 1 gal of dilution per 8 sq ft. Treat along the edge of walls, driveways or other hard surfaces where ants are tunneling beneath the surface.**
**APPLICATION FOR WOOD-INFESTING PESTS** (Contd)

<table>
<thead>
<tr>
<th>Pests</th>
<th>Control Measures</th>
</tr>
</thead>
<tbody>
<tr>
<td>Carpenter bees</td>
<td>In or on structures. Apply as spray or mist or sufficient volume of foam, directly into gallery entrance holes. Leave entrance open to be sure that returning adult bees are killed. When there is no longer any insect activity, the entrance hole may be sealed with a suitable sealant. Exterior wood surfaces may be treated by general surface application to prevent nest cavity excavation by adult carpenter bees.</td>
</tr>
</tbody>
</table>

**STORAGE AND DISPOSAL**

Do not contaminate water, food or feed by storage or disposal.

**PESTICIDE STORAGE**

Mix as needed. Store in original container in a secure dry storage area. Avoid extremes in temperatures. Prevent cross-contamination with other pesticides and fertilizers. If the container is leaking and/or material is spilled, on floor or paved surfaces, absorb or sweep up and remove to chemical waste area for your disposal. Concentrate is stable at normal storage temperatures.

**PESTICIDE DISPOSAL**

Waste resulting from the use of this product may be disposed of on site or at an approved waste disposal facility.

**CONTAINER DISPOSAL**

Non-refillable container. Do not reuse or refill container. Offer for recycling, if available. Triple rinse container or equivalent promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container 1/4 full with water and recap. Shake for 10 seconds. Pour mixture into application equipment or a mix tank or store in a safe place for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. If recycling is not available, purchase and dispose of in a sanitary landfill or by incineration, if allowed by state and local authorities, by burning. If burned stay out of smoke. If pasty filled, call your local solid waste agency for disposal instructions. Never place unused product down any indoor or outdoor drain.

**APPENDIX**

Use Temprid SC Insecticide as a general surface (outdoors only), spot, mist, or crack and crevice treatment. Permitted areas of use include the following buildings, structures, and modes of transport:

- apartment buildings
- bakeries
- bottling facilities
- breweries
- buses
- fire stations
- candy plants
- canning and processing plants
- correctional facilities
- dairies and dairy product processing plants
- frozen food plants
- grain mills
- greenhouses (structures only)
- hospitals
- houses
- industrial buildings
- kitchens
- laboratories
- livestock housing
- pet kennels
- manufacturing establishments
- mausoleums
- meat and produce canneries
- nursing homes
- packer factories
- poultry houses
- processing and packing plants
- restaurants
- schools
- space plants
- storages
- warehouses
- wineries and similar structures
- transportation vessels such as buses, trucks, trailers, rail cars, and marine vessels

For indoor applications at these sites (*), observe the following restrictions:

- Do not apply in food/meat areas of food and feed handling establishments.
- Do not apply broadcast treatments to floors or floor coverings.
- Do not apply in hospital and/or nursing home rooms while they are occupied.
- Do not apply in classrooms while they are occupied.
- Do not apply as a space spray.
- Do not allow excessive dripping or run-off to occur from vertical or overhead surfaces.
- Do not apply where electrical short circuits can occur, use a dust or dry bud in these areas.
- Do not apply to furniture or upholstery where prolonged contact with humans will occur.

**IMPORTANT: READ BEFORE USE**

Read the entire Directions for Use, Conditions, Disclaimer of Warranties and Limitations of Liability before using this product.
