TEMPRID™ SC

Insecticide

Intended For Use by Pest Management Professionals and Commercial Use Only.
In the state of New York this product may only be applied for indoor uses.

ACTIVE INGREDIENT:
Imidacloprid, 1-[(6-Chloro-3-pyridinyl)methyl]-N-nitro-2-imidazolidinimine ................. 21.0%
β- Cyfluthrin, Cyano(4-fluoro-3-phenoxyphenyl)methyl 3-(2,2-dichloroethenyl)-2,2-dimethylcyclopropanecarboxylate ... 10.5%

OTHER INGREDIENTS: ............. 68.5%

100.0%

EPA Reg. No. 432-1483
EPA Est. No. 432-TX-1

STOP - Read The Label Before Use.
Keep out of reach of children.

FIRST AID

If on skin:
• Take off contaminated clothing.
• Rinse skin immediately with plenty of water for 15 to 20 minutes.
• Call a poison control center or doctor for treatment advice.

If in eyes:
• Hold eye open and rinse slowly and gently with water for 15 to 20 minutes.
• Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.
• Call a poison control center or doctor for treatment advice.

If swallowed:
• Call a poison control center or doctor immediately for treatment advice.
• Have person sip a glass of water if able to swallow.
• Do not induce vomiting unless told to do so by a poison control center or doctor.
• Do not give anything to an unconscious person.

Have the product container or label with you when calling a poison control center or doctor or going for treatment. The Bayer Environmental Science Emergency Response Telephone No. is 1-800-334-7577.

Note to Physician: No specific antidote is available. Treat the patient symptomatically.

HAZARDS TO HUMANS AND DOMESTIC ANIMALS

CAUTION
Harmful if absorbed through skin. Harmful if swallowed. Causes moderate eye irritation. Avoid contact with skin, eyes or clothing. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum or using tobacco. Wear long-sleeved shirt and long pants, socks, shoes, and gloves. Remove contaminated clothing and wash before reuse.

ENVIRONMENTAL HAZARDS
This pesticide is extremely toxic to wildlife, fish and aquatic invertebrates. Do not apply directly to water, to areas where surface water is present or to intertidal areas below the mean high water mark. Drift and run-off from treated areas may be hazardous to aquatic organisms in neighboring areas. Do not contaminate water when disposing of equipment wash waters. Care should be used when spraying to avoid fish and reptile pets in/around ornamental ponds. This product is highly toxic to bees exposed to direct treatment or residues on blooming crops or weeds. Do not apply this product or allow it to drift to blooming crops if bees are visiting the treatment area.

PRO FACTS

• Two modes of action
• Contact activity & systemic action
• Quick knockdown & residual control
• Low odor
• Non-staining
• No phytotoxicity on a wide range of ornamentals

Tempria SC Insecticide
• Tempria SC Insecticide is a suspension concentrate formulation of two insecticide active ingredients, imidacloprid and β-cyfluthrin. One gallon of this product contains 2 lbs of imidacloprid and 1 lb of β-cyfluthrin.
• Shake well before using.

CONTROLS
• Indoor or General Household Pests
• Outdoor/Perimeter Pests
• Wood-Infesting Pests
For list of specific insects, see inside.

Where
• Apply where pests have been seen or found, or can find shelter.

To Apply
• In and around buildings and structures
• On established landscape ornamentals around residential and commercial properties

Dilution Rates
• When 0.27 fl oz (8 milliliters) is diluted in one gal of water, the combined active ingredient concentration is 0.075% imidacloprid and 0.025% β-cyfluthrin.
• When 0.54 fl oz (16 milliliters) is diluted in one gal of water, the combined active ingredient concentration is 0.15% imidacloprid and 0.05% β-cyfluthrin.

Mixing Information
• Mix the appropriate amount of Tempria SC Insecticide with water.
• Add product when filling spray tank with water; shake or agitate mixture.
• Diluted spray mixture can be stored overnight. Agitate before using.

How to Apply
• General surface (outdoors only), spot treatment, and void injections by mist, foam or crack & crevice sprays.
• Foliar application to established landscape ornamentals.

Re-Apply
• Every 7 to 16 days, if needed.

Re-Entry
• Do not contact treated surfaces until dry.
• People and pets may re-enter after the treated area is dry.

Questions
For questions or comments, call toll-free 1-800-331-2887

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Do not formulate this product into other end-use products.

INDOOR PESTS

FOR RESIDUAL PEST CONTROL IN BUILDINGS, STRUCTURES, AND MODES OF TRANSPORT
Use Tempria SC Insecticide as a spot spray or crack and crevice treatments inside buildings and structures. This includes schools, factories, stores, warehouses, hospitals, food processing facilities (non food/feed areas), and modes of transport. For a list of common facilities where this product may be used, see Appendix.

### How To Apply (Cont)

- **Foam**: Use appropriate foam generating equipment to supply a sufficient volume of foam. Mix the dilution with manufacturer’s specified volume of foaming agent.

### When To Apply

- When pests are seen or found
- **Re-apply every 7 to 10 days if needed**.

### Restrictions

- Do not apply in food/feed areas of food and feed handling establishments.
- Do not apply broadcast treatments to floors or floor coverings.
- Do not apply in hospital and/or nursing home rooms while they are occupied.
- Do not apply in classrooms while they are occupied.
- Do not apply as a space spray.
- Do not apply where electrical short circuits can occur.
- Do not apply to furniture or upholstery where prolonged contact with humans will occur.
- Do not spray bed linens or other materials which come in direct contact with occupants of the bed.
- Do not apply more than 5 gallons of diluted product indoors per individual applicator per day.

### APPLICATION FOR INDOOR PESTS

**Crawling insects**

- **Cockroaches**: Use a coarse, low-pressure spray (do not exceed 50 psi at nozzle tip). Treat entry points such as around water pipes, doors, windows, and eaves. Treat areas where pests normally feed or hide such as baseboards, corners, around water pipes, behind or under refrigerators, cabinets, sinks, and stoves.

- **Chickens**: Use a coarse, low-pressure spray (do not exceed 50 psi at nozzle tip). Treat entry points such as around water pipes, doors, windows, and eaves. Treat areas where pests normally feed or hide such as baseboards, corners, around water pipes, behind or under refrigerators, cabinets, sinks, and stoves.

- **Silverfish**: Use a coarse, low-pressure spray (do not exceed 50 psi at nozzle tip). Treat entry points such as around water pipes, doors, windows, and eaves. Treat areas where pests normally feed or hide such as baseboards, corners, around water pipes, behind or under refrigerators, cabinets, sinks, and stoves.

- **Spiders**: Use a coarse, low-pressure spray (do not exceed 50 psi at nozzle tip). Treat entry points such as around water pipes, doors, windows, and eaves. Treat areas where pests normally feed or hide such as baseboards, corners, around water pipes, behind or under refrigerators, cabinets, sinks, and stoves.

- **Other listed pests**: Use a coarse, low-pressure spray (do not exceed 50 psi at nozzle tip). Treat entry points such as around water pipes, doors, windows, and eaves. Treat areas where pests normally feed or hide such as baseboards, corners, around water pipes, behind or under refrigerators, cabinets, sinks, and stoves.

### Bed bugs

- **Use Rate**: 0.075% - 0.27 fl oz (8 milliliters) of Temprid SC per gal of water. Controls bed bug populations that are resistant to pyrethroid insecticides. Spray bugs and eggs directly wherever possible following site directions below.

- **Application**
  - For infested mattresses, remove linens and wash before reuse. Apply to tufts, seams, folds, and edges until moist. Allow to dry before remaking bed.
  - Apply to bed springs, box springs, and the interior of bed frames or headboards, including all cracks and joints.
  - When bed bugs are found in upholstered furniture, apply only to the infested tufts, seams, folds, and edges, but do not apply to flat surfaces where prolonged human contact will occur. If bugs heavily infest furniture (inside cushions and/or batting) apply a labeled insecticide dust or consider fumigation.
  - Apply as a crack and crevice treatment to all baseboards, moldings, beneath floor coverings and carpets, closets, shelves, curtains, furniture and picture frames that may provide harborage to bed bugs.
  - Re-apply every 7 to 10 days, as needed, until infestation is eliminated.
APPLICATION FOR INDOOR PESTS (Cont)

Ants
Apply to ant trails on walls, tile, baseboards, around pipes, under cabinets, and other places where ants are active. Treat entry points such as windows, doors or sites where utilities enter the structure; also see directions for use in Outdoor/Perimeter Pests section. Treat nests when possible.

Listed Flying Insects
Apply to surfaces where pests collect or rest.

OUTDOOR/PERIMETER PESTS

<table>
<thead>
<tr>

<tr>
<td>• Always use the 0.15% rate for fire ants, hornets, wasps and yellow jackets.</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

How To Apply (also see Applications For Outdoor/Perimeter Pests)
• Apply enough dilution to adequately cover the area without excessive dripping or run-off. Volume can vary depending on the surface type treated. For example, much requires more spray than bare soil. |
• For high volume applications, Temprid SC insecticide may be diluted at lower concentrations and applied in greater volumes of water. |
• When treating overhead areas, wear safety glasses, goggles, or face shield and a dust/mist respirator. |
• Do not contact treated surfaces until dry.

OUTDOOR/PERIMETER PESTS (Cont)

When To Apply
• When pests are seen or found |
• Re-apply every 7 to 10 days if needed.

APPLICATION FOR OUTDOOR/PERIMETER PESTS

Ants
Locate and treat ant nests, if possible. Follow trails of foraging workers, check under objects near the structure, and inspect other likely nest sites. If ants are nesting in the soil, thoroughly drench or inject the nest and surrounding soil. Treat ant trails around windows and doors, along sidewalks, or other areas where seen. Apply a perimeter treatment as described above. Temprid SC insecticide contains a systemic insecticide (imidacloprid), so foliar application to landscape ornamentals provides local systemic control of aphids, scale insects, and other plant-sucking insects and limits the production of honeydew (an important food source for ant populations).

Apply a very light mist of the diluted spray, and do not allow excess run-off. Treat thoroughly for good coverage including the underside of leaves as these pests often feed or rest there. Aerial Nests: If ant nests are located in tree hollows or non-structural wooden construction (e.g., posts, fences, decks) treat the interior cavity and/or the nest site by injecting a spray, mist, or sufficient volume of foam.

It is recommended to remove or prune away any shrubbery, bushes, and tree branches touching the structure. Vegetation touching the structure may offer a route of entry for ants into the structure. This may allow ants to inhabit the structure without coming in contact with the treatment.

Hornets, wasps, and yellow jackets
Use Rate: 0.15% - 0.54 fl oz (16 milliliters) of Temprid SC Insecticide per gal of water.
Make pin stream applications directly to the nests. To help avoid stings, treat nests in the evening when the insects are inside the nest. Remove and destroy treated nests to prevent emergence of newly hatched insects. If removal is not possible, retreat nests if necessary.

Occasional invaders
Boxelder bugs, elm leaf beetle, and other listed pests
Apply directly to insects that have congregated around doors and windows and similar areas where they may enter structures. Apply perimeter treatment as described above. For best results, treat Infested trees and shrubs early in the season. Tree spraying may require ornamental license – check with your local regulator.

Centipedes, millipedes, pill bugs, sow bugs, springtails, etc.
Apply perimeter treatment to reduce the number of insects entering the structure. Thoroughly treat mulched areas. Correcting moisture problems around the structure will reduce pest pressure.

### APPLICATION FOR OUTDOOR/PERIMETER PESTS (Cont)

<table>
<thead>
<tr>
<th>Pest</th>
<th>Use Rate:</th>
<th>Application Details</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fire Ants</td>
<td>0.15% - 0.54 fl oz (16 milliliters) of Temprid SC Insecticide per gal of water.</td>
<td>Thoroughly drench or inject the entire mound. When using injection treatment, you must treat the bottom of the mound. Apply dilution or foam using a downward and upward motion of the injector tool. For complete distribution, inject in several points throughout the mound. Treat new mounds as they appear. <em>Do not use in pastures or areas of food crop production.</em></td>
</tr>
<tr>
<td>Fleas &amp;ticks (including ticks that may transmit Lyme Disease and Rocky Mountain Spotted fever)</td>
<td>For ticks, treat likely harborage areas like along paths, tall grass and other vegetation. For fleas, concentrate treatments in areas where pets are known to rest, as these areas are larval breeding hot spots. Treat the entire area where these pests could be present. Fleas and ticks may be reintroduced from surrounding areas by host animals.</td>
<td></td>
</tr>
<tr>
<td>House flies and Cluster flies</td>
<td>Apply low-volume mist or spray to outside surfaces of buildings, porches, patios, garages, fences, and other areas where house flies rest. Cluster flies: Treat in late summer or fall, just before cluster flies begin looking for winter shelter. Spray siding, eaves, around windows and doors, window screens, and attics. To help reduce infestations, treat cracks and crevices, attics and other indoor winter hiding places.</td>
<td></td>
</tr>
<tr>
<td>Mosquitoes</td>
<td>Treat with spray or mist around landscape plants, turf and ground cover, under decks, around building foundations and other places where mosquitoes may rest.</td>
<td></td>
</tr>
<tr>
<td>Scorpions</td>
<td>Treat around piles of firewood and other areas where scorpions may hide. When possible, remove piles of materials that can harbor the pests. Apply a perimeter treatment. Do not treat firewood with this product.</td>
<td></td>
</tr>
</tbody>
</table>

### WOOD-INFEATING PESTS (Cont)

<table>
<thead>
<tr>
<th>Pest Type</th>
<th>Application Details</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Drywood termites &amp; wood-infesting beetles</strong></td>
<td><em>Galleries and structure voids</em>: Treat by applying sprays, mists, or foams. Locate galleries by using visual signs (frass or pellets, blistered wood, emergence or clean out holes, the presence of live insects, mechanical sounding techniques, or listening devices (e.g., stethoscopes, acoustic emission detectors). Penetrate the gallery system by drilling holes to receive the injector tip or treatment tool. Distribute drill holes to adequately cover the gallery system. Apply as a low pressure spray (do not exceed 50 psi at nozzle tip) or by misting or where appropriate, by foaming. It is not necessary to treat to the point where runoff is detected from adjacent holes.</td>
</tr>
<tr>
<td>Carpenter ants</td>
<td><em>Homes and other structures</em>: Apply around doors and windows and other places where carpenter ants may enter. Spray or foam into cracks &amp; crevices, or spray, mist or foam through small drilled holes into voids where ants are nesting. Use enough spray or foam to cover the area. Inside trees, utility poles, fencing and decking materials and similar structural members, drill to find the interior infested cavity and inject spray, mist or foam using a treatment tool with a splashback guard. Tunneling in soil: Apply as a soil drench or inject the dilution or foam in the soil at intervals of 8 to 12 inches. Use 1 gal of dilution per 8 sq ft. Treat the edges of walls, driveways or other hard surfaces where ants are tunneling beneath the surface.</td>
</tr>
</tbody>
</table>

(continued)
APPLICATION FOR WOOD-INFESTING PESTS (Cont)

- Protect firewood from carpenter ants. Treat soil beneath firewood before stacking at 1 gal of dilution per 8 sq ft.
- Do not treat firewood with this product.
- It is recommended to remove or prune away any shrubbery, bushes, and tree branches touching the structure. Vegetation touching the structure may offer a route of entry for ants into the structure. This may allow ants to inhabit the structure without coming in contact with the treatment.

Carpenter bees
- In or on structures: Apply as a spray or mist, or sufficient volume of foam, directly into gallery entrance holes. Leave entrance open to be sure that returning adult bees are killed. When there is no longer any insect activity, the entrance hole may be sealed with a suitable sealant.
- Exterior wood surfaces may be treated by general surface application to prevent nest cavity excavation by adult carpenter bees.

STORAGE AND DISPOSAL

- Do not contaminate water, food, or feed by storage or disposal.

PESTICIDE STORAGE
- Mix as needed. Store in original container in a secured dry storage area. Avoid extremes in temperatures. Prevent cross-contamination with other pesticides and fertilizers. If the container is leaking and/or material is spilled, on floor or paved surfaces, absorb on sawdust or other commercially available absorbing material, sweep up and remove to chemical waste area for your disposal. Concentrate is stable at normal storage temperatures.

PESTICIDE DISPOSAL
- Wastes resulting from the use of this product may be disposed of on site or at an approved waste disposal facility.

CONTAINER DISPOSAL
- Non-refillable container. Do not reuse or refill this container. Offer for recycling, if available. Triple rinse container (or equivalent) promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container 1/4 full with water and recap. Shake for 10 seconds. Four rinses into application equipment or a mix tank or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. If recycling is not available, puncture and dispose of in a sanitary landfill or by incineration, or if allowed by state and local authorities, by burning. Do not mix or store in a nursery or feed storage building.

APPENDIX

Use Temprid SC insecticide as a general surface (outdoors only), spot, mist, or crack and crevice treatment. Permitted areas of use include the following buildings, structures, and modes of transport:
- apartment buildings
- bakeries
- bottling facilities
- breweries
- butchers
- canteens
- candy plants
- cereal processing and manufacturing plants
- correctional facilities
- dairy and dairy product processing plants
- frozen food plants
- grain mills
- granaries
- greenhouses (structures only)
- hospitals
- hotels
- houses
- industrial buildings
- kitchens
- laboratories
- necropolis housing
- pet kennels
- manufacturing establishments
- mausoleums
- meat and produce canneries
- pickle factories
- poultry houses
- processing and packing plants
- restaurants
- schools
- stores
- warehouses
- wineries and similar structures
- transportation vessels such as buses, trucks, trailers, rail cars, and marine vessels

IMPORTANT: READ BEFORE USE

Read the entire Directions for Use, Conditions, Disclaimer of Warranties and Limitations of Liability before using this product. If terms are not acceptable, return the unopened product container at once.

By using this product, user or buyer accepts the following Conditions, Disclaimer of Warranties and Limitations of Liability.

CONDITIONS: The directions for use of this product are believed to be adequate and must be followed carefully. However, it is impossible to eliminate all risks associated with the use of this product.
