Axss Glyphosate Plus

Herbicide

AVOID CONTACT OF HERBICIDE WITH FOLIAGE, GREEN STEMS, EXPOSED NON-WOODY ROOTS OR FRUIT OF CROPS (EXCEPT AS SPECIFIED FOR INDIVIDUAL ROUNDUP READY® CROPS), DESIRABLE PLANTS AND TREES, BECAUSE SEVERE INJURY OR DESTRUCTION MAY RESULT.

ACTIVE INGREDIENT:
*Glyphosate, N-(phosphonomethyl)glycine, in the form of its isopropylamine salt

OTHER INGREDIENTS: ........................................................................................................... 49.0%

TOTAL ................................................. 100.0%

*Contains 480 grams per liter or 4 pounds per U.S. gallon of the active ingredient glyphosate, in the form of its isopropylamine salt. Equivalent to 356 grams per liter or 3 pounds per U.S. gallon of the acid, glyphosate.

KEEP OUT OF REACH OF CHILDREN
CAUTION

Si usted no entiende la etiqueta, busque a alguien para que se la explique a usted en detalle. (If you do not understand the label, find someone to explain it to you in detail).

Read the entire label before using this product. Use only according to label instructions.

Not all products specified on this label are registered for use in California. Check the registration status of each product in California before using.

Read the "LIMIT OF WARRANTY AND LIABILITY" statement at the end of the label before buying or using. If terms are not acceptable, return at once unopened.

See label booklet for Additional Precautionary Statements and Directions for Use.

Manufactured For:
AXSS USA, LLC

PRECAUTIONARY STATEMENTS
Hazard to Humans and Domestic Animals

Harmful if inhaled. Causes moderate eye irritation. Avoid breathing spray mist. Avoid contact with eyes or clothing.

FIRST AID

IF IN EYES
• Hold eye open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses if present after the first 5 minutes then continue rinsing eye.
• Call a Poison Control Center or doctor for treatment advice.

IF INHALED
• Move person to fresh air.
• If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably mouth-to-mouth if possible.
• Call a Poison Control Center or doctor for further treatment advice.

IF SWALLOWED
• Call a Poison Control Center or doctor immediately for treatment advice.
• Give several glasses of water or other oral fluids.
• Do not induce vomiting unless told to by a Poison Control Center or doctor.
• Do not give anything to an unconscious person.

Have the product container or label with you when calling a poison control center or doctor, or going for treatment. This product is identified as Axss Glyphosate Plus, EPA Registration No. 83520-7. You may also contact 1-800-922-1222 day or night, for emergency medical treatment information.

Personal Protective Equipment (PPE)
Applicators and other handlers must wear: long-sleeved shirt and long pants, long-sleeved shirt and long pants, protective eyewear, and protective overgarments. Follow manufacturer’s instructions for cleaning/maintaining PPE. If no such instructions are available, wash PPE thoroughly and put on clean clothing.

When handlers use closed systems, enclose out of reach from children.

Use Safety Recommendations:
Users should:
• Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet.
• Remove clothing immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.

Domestic Animals: This product is considered to be relatively non-toxic to dogs and other domestic animals; however, ingestion of this product or large amounts of freshly sprayed vegetation may result in temporary gastrointestinal irritation (vomiting, diarrhea, colic, etc.). If such symptoms are observed, provide the animal with plenty of fluids to prevent dehydration. Call a veterinarian if symptoms persist for more than 24 hours.

Environmental Hazards
Do not apply directly to water, to areas where surface water is present or to intermittent areas below the mean high water mark. Do not contaminate water when cleaning equipment or disposing of equipment washwaters.

Physical or Chemical Hazards
Spray solutions of this product should be mixed, stored and applied using only stainless steel, aluminum, fiberglass, plastic or plastic-lined steel containers. Do not mix, store or apply this product or spray solutions of this product in galvanized steel or unlined steel (except stainless steel) containers or spray tanks. This product or spray solutions of this product react with such containers and tanks to produce hydrogen gas which may form a highly combustible gas mixture. This gas mixture could flash or explode, causing serious personal injury. If ignited by open flame, spark, welder’s torch, lighted cigarette or other ignition source.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in any manner inconsistent with its labeling. This product can only be used in accordance with the Directions for Use on this label or in separately published Supplemental Labeling. Supplemental labeling may be found on the cdms.net or greenbook.net websites or obtained by contacting your local distributor.

ENDANGERED SPECIES PROTECTION REQUIREMENTS: This product may have effects on federally listed threatened or endangered species or their critical habitat in some locations. When using this product, you must follow the measures contained in the Endangered Species Protection Bulletin for the county or parish in which you are applying the pesticide. To determine whether your county or parish has a Bulletin, and to obtain that Bulletin, consult http://www.epa.gov/ssp or call 1-800-447-3813 no more than 6 months before using this product. Applicators must use Bullets that are in effect in the month in which the pesticide will be applied. New Bullets will generally be available from the above sources 6 months prior to their effective dates. Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only those areas that are to be treated shall be treated.

For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulations.

Agricultural Use Requirements
Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted entry interval. The requirements in this box only apply to areas of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 4 hours.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water, to: coveralls, chemical-resistant gloves greater than 14 millies in thickness composed of materials such as butyl rubber, natural rubber, neoprene rubber, or nitrile rubber, shoes plus socks and protective eyewear.
Non-Agricultural Use Requirements

The requirements in this box apply to use of this product that are NOT within the scope of the Worker Protection Standard for agricultural pesticides (40 CFR Part 170). The WPS applies when this product is used to preclude agricultural plants on farms, forests, nurseries or greenhouses. Keep pets and people off treated areas until spray solution has dried.

STORAGE AND DISPOSAL

Do not contaminate water, foodstuffs, feed or seed by storage or disposal. PESTICIDE STORAGE: Keep container closed to prevent spillage and contamination. PESTICIDE DISPOSAL: Wastes resulting from the use of this product that cannot be burned or otherwise disposed of shall be disposed of in a landfill approved for pesticide disposal or in accordance with applicable Federal, state, or local procedures. Emptied container retains vapor and product residue. Observe all labeled safeguards until container is cleaned, conditioned, or destroyed. CONTAINER DISPOSAL: Non-refillable containers. Do not reuse or refill this container. Offer for recycling, if available. Triple rinse or pressure rinse container (or equivalent) promptly after emptying. Non-refillable container less than or equal to 5 gallons: Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container 1/4 full with water and recap. Shake for 10 seconds. Pour rinse into application equipment or a known safe storage container or safe storage container or safe storage container for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Non-refillable container greater than 5 gallons: Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container 1/4 full with water. Recap and tighten closures. Tip container on its side and roll it back and forth, ensuring at least one complete revolution, for 30 seconds. Stand the container on its end and tip back and forth six or seven times. Empty the rinse into application equipment or a mix tank or store rinse for later use or disposal. Repeat this procedure two more times. Pressure rinse as follows (all sizes): Empty the remaining contents into application equipment or mix tank and drain for 10 seconds after the flow begins to drip. Hold container upside down over application equipment or mix tank or collect rinse to use for later use or disposal. Insert pressure rinsing nozzle in the side of the container and rinse at about 40 PSI for at least 30 seconds. Drain rinse for 10 seconds after the flow begins to drip. Refillable container (250 gallon & bulk): Refill this container with pesticide only. Do not reuse this container for any other purpose. Cleaning the container before final disposal is the responsibility of the person disposing of the container. Cleaning before refilling is the responsibility of the refill. To clean the container before final disposal, empty the remaining contents from the container into application equipment or mix tank. Fill the container about 10 percent full with water. Agitate vigorously or recirculate water with pump for 2 minutes. Pour or pump rinse into application equipment or rinse line collection system. Repeat this rinsing process two more times.

GENERAL INFORMATION

This product is a postemergence, systemic herbicide with no soil residual activity. It is generally non-selective and gives broad-spectrum control of many annual weeds, perennial weeds, woody brush and trees, it is formulated as a water-soluble liquid. It may be applied through most standard industrial or field sprayers after dilution and thorough mixing with water or other carriers according to label instructions.

Time to Symptoms

This product moves through the plant from the point of foliage contact to and into the root system. Visible effects are a gradual wilting and yellowing of the plant, which advances to complete browning of above ground growth and deterioration of underground plant parts. Effects are visible on most annual weeds within 2 to 4 days, but on most perennial weeds effects may not be visible for 7 days or more. Extremely cool or cloudy weather following treatment may slow activity of this product and delay development of visual symptoms.

Stage of Weeds

Annual weeds are easiest to control when they are small. Best control of most perennial weeds is obtained when treatment is made at late growth stages approaching maturity. Refer to the "ANNUAL WEEDS", "PERENNIAL WEEDS" and "WOODY BRUSH AND TREE RATE SECTION" for specific weed recommendations.

Always use the higher product application rate within the specified range when weed growth is heavy or dense or when weeds are growing in an undisturbed (non-cultivated) area. Reduced weed control may result from treating weeds with disease or insect damage, weeds heavily covered with dust, or weeds under poor growing conditions.

Cultural Considerations

Reduced control may result when applications are made to annual or perennial weeds that have been mowed, grazed, or cut and have not been allowed to regrow to the specified stage for treatment.

Rainfastness

Heavy rainfall soon after application may wash this product off of the foliage and a repeat application may be required for adequate control.

Spray Coverage

For best results, spray coverage should be uniform and complete. Do not spray foliage to the point of runoff.

Mode of Action

The active ingredient in this product inhibits an enzyme found only in plants and microorganisms that is essential to the formation of specific amino acids.

No Soil Activity

Weeds must be emerged at the time of application to be controlled by this product. Weeds germinating from seed after application will not be controlled. Un-emerged plants arising from unachieved underground rhizomes or root stocks of perennial will not be affected by this herbicide and will continue to grow.

Biological Degradation

Degradation of this product is primarily a biological process carried out by soil microbes.

Annual Maximum Application Rates

The maximum application or use rates stated throughout this product's labeling are given in units of volume (fluid ounces, pints, or quarts) of this product per 3
zero. However, the maximum allowed application rates apply to this product combined with the use of any and all other herbicides containing the active ingredient glyphosate, whether applied separately or as tank mixtures, on a basis of total pounds of glyphosate (acid equivalents) per acre. If more than one glyphosate-containing product is applied to the same site within the same year, you must ensure that the total use of glyphosate does not exceed the maximum allowed. See the ‘INGREDIENTS’ section of this label for necessary product information.

Except as otherwise specified in a crop section of this label, the combined total of all treatments must not exceed 8 quarters of this product (8 pounds of glyphosate acid) per acre per year. For applications in non-crop sites or in tree, vine, or shrub crops, the combined total of all treatments must not exceed 10.8 quarters of this product (8 pounds of glyphosate acid) per acre per year.

**ATTENTION**

AVOID CONTACT OF HERBICIDE WITH FOLIAGE, GREEN STEMS, EXPOSED NON-WOODY ROOTS OR FRUIT OF CROPS, DESIRABLE PLANTS AND TREES, BECAUSE SEVERE INJURY OR DESTRUCTION MAY RESULT.

AVOID DRIFT. EXTREME CARE MUST BE USED WHEN APPLYING THIS PRODUCT TO PREVENT INJURY TO DESIRABLE PLANTS AND CROPS.

Do not allow the herbicide solution to leak, drip, drift or splash onto desirable vegetation since minute quantities of this product can cause severe damage or destruction to the crop, plants or other areas on which treatment was not intended. The likelihood of injury occurring from the use of this product increases when winds are gusty, as wind velocity increases, when wind direction is constantly changing or when there are other meteorological conditions that favor spray drift. When spraying, avoid combinations of pressure and nozzle types that will result in spotter or fine particles (mist) that are likely to drift. AVOID APPLYING AT EXCESSIVE SPEED OR PRESSURE.

**NOTE:** Use of this product in any manner not consistent with this label may result in injury to persons, animals or crops, or have unintended consequences.

**WEED RESISTANCE MANAGEMENT**

Glyphosate, the active ingredient in this product, is a Group 9 herbicide based on the mode of action classification system of the Weed Science Society of America. Any weed population may contain plants naturally resistant to Group 9 herbicides. Weed species resistant to Group 9 herbicides may be effectively managed utilizing another herbicide from a different group or by using other cultural or mechanical practices.

**General Weed Management Recommendations**

To minimize the occurrence of glyphosate-resistant biotypes observe the following general weed management recommendations:

1. Scout your fields before and after herbicide applications.
2. Start with a clean field, using either a barndown herbicide application or tillage.
3. Control weeds early when they are relatively small.
4. Add other herbicides (e.g., a selective and/or a residual herbicide) and cultural practices (i.e., tillage or crop rotation) where appropriate.
5. One method for adding other herbicides into a continuous Roundup Ready system is to rotate to other Roundup Ready crops.
6. Utilize the specified label rate for the most difficult to control weed in your field. Avoid tank-mixtures with other herbicides that reduce this product’s efficacy (through antagonism), or tank mixture recommendations that encourage application rates of this product below the label recommendations.
7. Control weed escapes and prevent weeds from setting seeds.
8. Clean equipment before moving from field to field to minimize the spread of weed seed or plant parts.
9. Use new commercial seed that is free of weed seed as possible.
10. Report any incidence of repeated non-performance of this product on a particular weed to your county extension agent.

**Management Recommendations**

**For Glyphosate Resistant Biotypes**

Note: Appropriate testing is critical in order to determine if a weed is resistant to glyphosate. Contact your local county extension agent or visit the following websites: www.weedsresistantmanagement.com or www.weedscontrol.org. For more information use the “ANNUAL WEEDS” and “POTENTIAL WEEDS RATE SECTION” of this label.

Since the occurrence of new glyphosate-resistant weeds cannot be determined until after product use and scientific confirmation, Axxis USA, LLC is not responsible for any losses that may result from the failure of this product to control glyphosate-resistant weeds biotypes. The following good agronomic practices are suggested to reduce the spread of confirmed glyphosate-resistant biotypes:

1. If a naturally occurring resistant biotype is present in your field, this product should be tank-mixed or applied sequentially with an appropriately labeled herbicide with a different mode of action to achieve control.
2. Cultural and mechanical control practices (e.g., crop rotation or tillage) may also be used as appropriate.
3. One method for adding other herbicides into a continuous Roundup Ready system is to rotate to other Roundup Ready crops.
4. Scout treated fields after herbicide applications and control escaping weeds including resistant biotypes before they set seed.
5. Thoroughly clean equipment before leaving fields known to contain resistant biotypes.

**MIXING**

Spray solutions of this product should be mixed, stored and applied using only clean stainless steel, aluminum, fiberglass, plastic or plastic-lined steel containers.

DO NOT MIX, STORE OR APPLY THIS PRODUCT OR SPRAY SOLUTIONS OF THIS PRODUCT IN STAINLESS STEEL, ALUMINUM, OR PLASTIC CONTAINERS OR SPRAY TANKS.

Eliminate any risk of splashing the contents of the tank back into the carrier source while mixing. Use approved anti-back-siphoning devices where required by State or local regulations. Clean sprayer parts immediately after using this product by thoroughly flushing with water.

**NOTE:** PRODUCT PERFORMANCE MAY BE SIGNIFICANTLY REDUCED IF WATER CONTAINING SOIL SEWAGE IS USED AS CARRIER. DO NOT MIX THIS PRODUCT WITH WATER FROM PONDS AND DITCHES THAT IS VISIBLY Muddy OR MARKE

**Mixing with Water**

This product mixes readily with water. Mix spray solutions of this product as follows: Begin filling the mixing tank or spray tank with clean water. Add the
specified amount of this product near the end of the filling process and mix gently. Use caution to avoid spilling and then the carrier source. During mixing, mixing or foaming of the spray solution may occur. To prevent or minimize foaming, mix gently, terminate by-pass and return lines at the bottom of the tank and, if necessary, use an anti-foam or defoaming agent.

**Tank Mixtures**

This product does not provide residual weed control. This product may be tank-mixed with other herbicides to provide residual weed control, a broader weed control spectrum or an alternate mode of action. Read and follow all label directions of all products in the tank mixture.

Buyer and all users are responsible for all loss or damage in connection with the use or handling of mixtures of this product with herbicides or other materials that are not expressly specified in this labeling, or in separate supplemental labeling for this product.

Tank mixtures with other herbicides, mectocloids, fungicides, microorganisms or fertilizer fertilizers may result in reduced weed control or crop injury and are NOT specified for applications of this product unless otherwise noted in this product label, or in separate supplemental labeling.

When a tank mixture with a generic active ingredient, such as clethodim, atrazine, 2,4-D or dicamba, is specified in this label, the user is responsible for ensuring that the specific application being made is included on the label of the specific product being used in the tank mixture. Refer to all individual product labels, supplemental labeling and fact sheets for all products in the tank mixture, and observe all precautions and limitations on the label, including application timing restrictions, soil restrictions, minimum re-cropping interval and rotational guidelines. Use according to the most restrictive label requirements.

Always predetermine the compatibility of all tank-mix products together in the carrier by mixing small proportional quantities in advance. For best results, it is specified that tank mixtures with this product be applied at a minimum spray volume rate of 10 gallons per acre.

**Tank Mixing Procedure**

Prepare tank mixtures of this product as follows:

1. Place a 20- to 35-mesh screen or wetting basket over the filling port of the tank.
2. Through the screen, fill the tank one-half full with water and start gentle agitation.
3. If ammonium sulfate is to be used, add it slowly through the screen into the tank, and continue adding water into the tank through the screen. If dry ammonium sulfate is being used, ensure that it is completely dissolved in the tank before adding other products.
4. If a wettable powder is used, make a slurry with the water, and add it SLOWLY through the screen into the tank while continuing gentle agitation.
5. If a flowable formulation is used, premix one part flowable with one part water, and add the slushed mixture SLOWLY through the screen into the tank while continuing gentle agitation.
6. If an emulifiable concentrate formulation is used, premix one part emulifiable concentrate with two parts water, and add the slushed mixture slowly through the screen into the tank while continuing gentle agitation.
7. Continue filling the tank with water through the screen and add the required amount of this product near the end of the filling process.
8. If a nonionic surfactant is used, add it to the tank before completing the filling process.

9. Add additional formulations to the spray tank as follows: water based powder, flowable, emulifiable concentrate, drift control additive, water-soluble liquid (this product) followed by surfactant.

Maintain gentle agitation at all times until the contents of the tank are sprayed out. If the spray mixture is allowed to settle, thorough agitation is required to resuspend the mixture before spraying.

Keep by-pass and return lines on or near the bottom of the tank to minimize foaming. Screen size in nozzle or line strainers should be no finer than 50 mesh.

**Mixing for Hand-Held Sprayers**

Prepare the desired spray volume by mixing the amount of this product as indicated in the following table in water:

<table>
<thead>
<tr>
<th>Desired Volume</th>
<th>Amount of Ass Glyphosate Plus</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>0.5%</td>
</tr>
<tr>
<td>1 gal</td>
<td>0.7 oz</td>
</tr>
<tr>
<td>25 gal</td>
<td>1 gal</td>
</tr>
<tr>
<td>100 gal</td>
<td>2 gal</td>
</tr>
</tbody>
</table>

2 tablespoons = 1 fluid ounce

For use in backpack sprayers, it is specified that the appropriate amount of this product be mixed with water in a larger container and then fill the sprayer with the mixed solution.

**Surfactants**

Nonionic surfactants (NIS) or wetting agents that have at least 70 percent active ingredient and are labeled for use with herbicides may be added to the spray solution, unless otherwise directed. Do not reduce rates of this herbicide when adding surfactants. Read and carefully observe cautionary statements and other information appearing on the additives label.

**Ammonium Sulfate**

The addition of 1 to 2 percent dry ammonium sulfate by weight or 8.5 to 17 pounds per 100 gallons of water may increase the performance of this product on annual and perennial weeds, particularly under hard water conditions, drought conditions or when tank mixed with certain residual herbicides. The equivalent rate of ammonium sulfate in a liquid formulation may also be used. Ensure that dry ammonium sulfate is completely dissolved in the spray tank before adding herbicides. Thoroughly rinse the spray system with clean water after use to reduce corrosion.

**Colorants or Dyes**

Colorants or marking dyes may be added to spray solutions of this product; however, they can reduce performance. Use colorants or dyes according to the manufacturer’s recommendations.

**Drift Reduction Additives**

Drift reduction additives may be used with all equipment types, except wiper applicators, sprayer bars, and Controlled Growth Applicator (CGA) equipment. When a drift reduction additive is used, read and carefully observe the precautions, limitations, and all other information appearing on the additive label. Use of drift reduction additives can affect spray coverage, which can reduce product performance.
APPLICATION EQUIPMENT AND TECHNIQUES

Do not apply this product through any type of irrigation system. This product may be applied with the following application equipment:

Aerial—Fixed wing and helicopters.

Ground Broadcast Spray—Boom or boomless systems, pull-type sprayers, flappers, pick-up sprayers, spray coops and other ground broadcast equipment.

Hand-Held or Backpack Spray Equipment—Backpack sprayers, pump-up pressure sprayers, handguns, handwands, mistblowers*, lances and other hand-held and motorized spray equipment used to direct the spray onto weed foliage.

*This product is not registered in California or Arizona for use in mistblowers.

Selective Equipment—Shielded and hooded sprayers, wiper applicators and sponge bars.

Injection Systems—Aerial or ground injection sprayers.

Controlled Droplet Applicator (CDA)—Hand-held or boom-mounted applicators that produce a spray consisting of a narrow range of droplet sizes.

APPLY THESE SPRAY SOLUTIONS IN PROPERLY MAINTAINED AND CALIBRATED EQUIPMENT CAPABLE OF DELIVERING THE DESIRED VOLUMES.

Aerial Equipment

DO NOT APPLY THIS PRODUCT USING AERIAL SPRAY EQUIPMENT EXCEPT UNDER CONDITIONS SPECIFIED IN THIS LABEL.

All labeled treatments may be made by aerial equipment where appropriate, provided that the applicator complies with the precautions and restrictions specified on this product’s labeling. Use the specified rates of this herbicide in 3 to 15 gallons of water per acre unless otherwise specified on this label. Unless otherwise specified, do not exceed 2 quarts per acre. Refer to the individual use area sections of this label for further instructions.

This product, when tank mixed with dicamba, may not be applied by air in California. When tank mixing this product with 2,4-D, only 2,4-D amine formulations may be used for aerial application in California. Tank mixes with 2,4-D amine formulations may be applied by air in California for follow and reduced tillage systems, and for alfalfa and pasture renovation applications only. Ensure uniform application - to avoid streaked, uneven or overlapped application, use appropriate marking devices.

Aircraft Maintenance

Thoroughly wash aircraft, especially landing gear, after each day of spraying to remove residues of this product accumulated during spraying or from spills. PROLONGED EXPOSURE OF THIS PRODUCT TO UNEOATED STEEL SURFACES MAY RESULT IN CORROSION AND POSSIBLE FAILURE OF THE PART. LANDINGS GEAR IS MOST SUSCEPTIBLE. Maintaining an organic coating (paint) that meets aerospace specification MIL-C-38143 may help prevent corrosion.

AERIAL SPRAY DRIFT MANAGEMENT

The following drift management requirements must be followed to avoid off-target movement during aerial applications to agricultural field crops.

1. The distance of the outermost nozzles on the boom must not exceed 3/4 the length of the wingspan or rotor.

2. Nozzles must always point backward, parallel with the air stream and never be pointed downwards more than 45 degrees. Comply with all State regulations where applicable.

Importance of Droplet Size

The most effective way to reduce drift-potential is to apply large droplets. The best drift management strategy is to apply the largest droplets that provide sufficient coverage and control. Applying larger droplets reduces drift potential, but will not prevent drift if applications are made improperly, or under unfavorable environmental conditions (read the following sections on "Wind", "Temperature and Humidity", and "Temperature Inversions").

Controlling Droplet Size

• Volume: Use high flow rate nozzles to apply the highest practical spray volume. Nozzles with the higher rated flows produce larger droplets.

• Pressure: Use the lower spray pressures specified for the nozzle. Higher pressure reduces droplet size and does not improve canopy penetration. When higher flow rates are needed, use higher flow rate nozzles instead of increasing spray pressure.

• Number of nozzles: Use the minimum number of nozzles that will provide uniform coverage.

• Nuzzle orientation: Orienting nozzles so that the spray is ejected backwards, parallel to the airstream, will produce larger droplets than other orientations. Significant deflection from the horizontal will reduce droplet size and increase drift potential.

• Nuzzle type: Use a nozzle type that is designed for the intended application. With most nozzle types, narrower spray angles produce larger droplets. Consider using low-drift nozzles. Solid stream nozzles oriented straight back produce larger droplets than other nozzle types.

• Boom length: For some use patterns, reducing the effective boom length to less than 3/4 of the wingspan or rotor length may further reduce drift without reducing swath width.

• Application height: Applications must not be made at a height greater than 10 feet above the top of the largest plants unless a greater height is required for aircraft safety. Making applications at the lowest height that is safe reduces the exposure of the droplets to evaporation and wind.

Swath Adjustment

When applications are made with a crosswiped, the swath will be displaced downward. Therefore, on the up and downwind edges of the field, the applicator must compensate for this displacement by adjusting the path of the aircraft upwind. Swath adjustment distance should increase, with increasing drift potential (higher wind speed, smaller droplets, etc.).

Wind

Drift potential is lowest between wind speeds of 2 to 10 mph. However, many factors, including droplet size and equipment type, determine drift potential at any given wind speed. Application should be avoided when wind speeds are below 2 mph due to variable wind directions and high inversion potential. NOTE: Local terrain can influence wind patterns. Every applicator must be familiar with local wind patterns and how they affect drift.

Temperature and Humidity

When making applications in low relative humidity, set up equipment to produce larger droplets to compensate for evaporation. Droplet evaporation is most severe when conditions are both hot and dry.

Temperature Inversions

Applications must not occur during a temperature inversion because drift potential is minimal. Temperature inversions restrict vertical air mixing, which causes small suspended droplets to remain in a concentrated cloud. This cloud can
move in unpredictable directions due to the light variable winds common during inversions. Temperature inversions are characterized by increasing temperatures with altitude and are common on nights with limited cloud cover and light to no wind. They often begin to form as the sun sets and often continue into the morning. Their presence can be indicated by ground fog; however, if fog is not present, the movement of smoke produced by a ground source or an aircraft smoke generator can also identify temperature inversions. Smoke that layers and moves literally in a concentrated cloud (under low wind conditions) indicates an inversion, while smoke that moves upward and rapidly dissipates indicates good vertical air mixing.

Sensitive Areas
Apply this product only when the potential for drift to adjacent sensitive areas (e.g. residential areas, bodies of water, or areas threatened or endangered species, non-target crops) is minimal (e.g. when wind is blowing away from the sensitive areas).

Avoid direct application to any body of water.

FOR AERIAL APPLICATION IN CALIFORNIA ONLY
Extreme care must be exercised to avoid contact of spray with foliage, green stems, or fruit of desirable crops, plants, trees, or other desirable vegetation since severe damage or destruction may result.

Noncrop sites When applied as directed and under the conditions described in the "Weeds Controlled" section of this label booklet for this product, this herbicide will control or partially control the labeled weeds growing in the following industrial, recreational and public areas, such as airports, ditch banks, dry ditches, dry canals, fences, fences, gullies, highways, industrial plant sites, lumber yards, manufacturing sites, office complexes, parking areas, parks, petroleum tank farms and pumping installations, pipelines, power and telephones rights-of-way, railroads, roadsides (guardrails, shoulders), schools, storage areas, utility substations, warehouse areas and other public sites.

AVOID DRIFT - DO NOT APPLY WHEN WINDS ARE GUSTY OR UNDER ANY OTHER CONDITION THAT WILL ALLOW DRIFT. DRIFT MAY CAUSE DAMAGE TO ANY VEGETATION CONTACTED TO WHICH TREATMENT IS NOT INTENDED.

To prevent injury to adjacent desirable vegetation, appropriate BUFFER ZONES MUST BE MAINTAINED.

Use the following guidelines when aerial applications are made near crops or desirable perennial vegetation after bud break and before total leaf drop, and/or near other desirable vegetation or noncrop areas.

1. Do not apply within 100 feet of all desirable vegetation or crop(s).
2. If wind up to 5 miles per hour is blowing toward desirable vegetation or crop(s), do not apply within 500 feet of the desirable vegetation or crop(s).
3. Winds blowing from 5 to 10 miles per hour toward desirable vegetation or crop(s) may require buffer zones in excess of 500 feet.
4. Do not apply when winds are in excess of 10 miles per hour or when inversion conditions exist.

Ground Broadcast Equipment
Apply the product rates specified in this label in 3 to 40 gallons of water per acre as a broadcast spray unless otherwise specified. As density of winds increases, spray volume should be increased within the specified range to ensure complete coverage. Carefully select proper nozzles to avoid generating a fine mist. For best results with ground application equipment, use flat spray nozzles. Check spray pattern for uniform distribution.

Thoroughly wash aircraft, especially landing gear, after each day of spraying to remove residue of this product accumulated during spraying or from spills. PROLONGED EXPOSURE OF THIS PRODUCT TO UNCOATED STEEL SURFACES MAY RESULT IN CORROSION AND POSSIBLE FAILURE OF THE PART. LANDING GEAR IS MOST SUSCEPTIBLE. Maintaining an organic coating (paint) that meets aerospace specification MIL-D-30413 may prevent corrosion.

For Aerial Application in Fresno County, California Only
From February 15 through March 31 only. For aerial application outside of these dates, refer to the "FOR AERIAL APPLICATION IN CALIFORNIA ONLY" section printed above.

General Information
Always read and follow the label directions and precautionary statements for all products used in the aerial application. Observe the following directions to minimize off-site movement during aerial application of this herbicide. Minimization of off-site movement is the responsibility of the grower, Pest Control Advisor, and aerial applicator.

Written Recommendations
A written recommendation MUST be submitted by or on behalf of the applicator to the Fresno County Agricultural Commissioner 24 hours prior to the application. This written recommendation MUST state the proximity of surrounding crops, and that conditions of each manufacturer's applicable product label(s) and this label have been satisfied.

Aerial Applicator Training and Equipment
Aerial application of this herbicide is limited to pilots who have successfully completed a Fresno County Agricultural Commissioner and California Department of Pesticide Regulation approved training program for aerial application of herbicides. All aircraft must be inspected, calibrated in flight, and certified at a Fresno County Agricultural Commissioner approved fly-in. Test and calibrate spray equipment at intervals sufficient to ensure that proper rates of herbicides and adjuvants are being applied during commercial use. Applicator must document such calibrations and testing. Demonstration of performance at Fresno County Agricultural Commissioner approved fly-in constitutes such documentation, or other written records showing calculations and measurements of flight and spray parameters acceptable to the Fresno County Agricultural Commissioner.

Application at night - Do not apply this product by aerial method earlier than 30 minutes prior to sunrise and/or later than 30 minutes after sunset without prior permission from the Fresno County Agricultural Commissioner.

Read the "WARRANTY" section in the label booklet before using this product.
Hand-Held or Backpack Equipment
Apply to foliage of vegetation to be controlled on a spray-to-wet basis; do not spray to the point of run-off. Spray coverage shall be uniform and complete. Use coarse sprays only. For specific rates and timing, refer to the "ANNUAL WEEDS = HAND-HELD OR BACKPACK EQUIPMENT" section of this label.
For low-volume directed spray applications, spray coverage should be uniform with at least 50 percent of the foliage contacted. Coverage of the top one-half of the plant is important for best results. To ensure adequate spray coverage, spray both sides of large or tall weeds brush and trees, when foliage is thick and dense, or where there are multiple sprouts.
Selective Equipment
This product may be diluted in water and applied through shielded sprayers, header sprayers, wiper applicators or sponge bars to weeds growing in any non-crop site specified on this label.
In crop spraying, shielded sprayers, shielded sprayers, and wipers may be used in row middles (in between rows of crop plants), and wipers may be used over-the-top of crops only when specified in this product's labeling. Such equipment must be capable of preventing all crop contact with the herbicide solution and operated without leakage of spray mist or dripping onto crop.
Avoid Contact of Herbicide with Desirable Vegetation.
Contact of this product with desirable vegetation may result in unwanted plant damage or destruction. Crop injury may occur when the foliage of treated weeds comes into contact with leaves of the crop. Do not apply this product when crop leaves are growing in direct contact with weeds to be treated. Droplets, mist, foam or splatter of the herbicide solution settling onto desirable vegetation may result in discoloration, stunting or destruction.
Better results may be obtained when more of the weed is exposed to the herbicide solution. Weeds not contacted by the herbicide solution will not be affected. This may occur in dense clumps, severed infestations or when the height of the weeds varies so that not all weeds are contacted. In these instances, repeat treatment may be necessary.
Shielded or Hooded Sprayers
When applied as directed under conditions described for shielded applicators, this product will control weeds listed in the "ANNUAL WEEDS RATE SECTION" and "PERENNIAL WEEDS RATE SECTION" of this label. Use the following equation to convert from a broadcast rate per acre to a band rate per acre:

\[
\text{Band width in inches} \times \frac{\text{Herbicide Broadcast RATE}}{\text{Herbicide Band RATE}} = \text{Band width in inches}
\]

A hooded sprayer is a type of shielded applicator where the spray pattern is fully enclosed including top, sides, front and back, thereby shielding the crop from the spray solution. Adjust the shields on these sprayers to protect desirable vegetation. When applying to crops grown on raised beds, ensure that the hood is capable of completely enclosing the spray pattern. If necessary, extend the front and rear flaps of the hooded applicator downward to reach the ground in dense furrows. EXTREME CARE MUST BE TAKEN TO AVOID CONTACT OF HERBICIDE WITH DESIRABLE VEGETATION.

This equipment must be configured and operated in a manner that minimizes bouncing and avoids raising the hoods off the ground at any time. If the hood is raised, spray particles may escape and come into contact with the crop, causing damage or extraction of the crop. Avoid operating this equipment on rough or sloping terrain where the spray heads might be raised up off the ground surface.

Use hoods designed to minimize excessive damping or run-off down the insides of the hoods. A single, low pressure low-drift flat-fan nozzle with an 80 to 95 degree spray angle positioned at the top center of the hood is specified. Spray volume should be 40-50 gallons per acre.

These procedures will reduce the potential for crop injury:
- Spray hoods must be operated on the ground or skimming across the ground surface.
- Spray at least 18 inches to the side of the drop row. (For example, if the crop row width is 38 inches, the maximum width of the spray hood should be 50 inches.)
- Operate at ground speeds of no greater than 5 miles per hour to avoid bouncing of the spray hoods.
- Apply when wind speeds are 10 miles per hour or less.
- Use low-drift nozzles that provide uniform coverage within the treated area.

Crop injury may occur when foliage of treated weeds comes into direct contact with leaves of the crop. Do not apply this product when leaves of the crop are growing in direct contact with weeds to be treated. Droplets, mist, foam or splatter of the herbicide solution settling onto desirable vegetation may result in discoloration, stunting or destruction.

Wiper Applicators
Wiper applicators are devices that physically wipe appropriate amounts of this product directly onto the weed. Equipment must be designed, maintained and operated to prevent the herbicide solution from contacting desirable vegetation.

Application equipment used over the top of desirable vegetation should be adjusted so that the wiper contact point is at least 2 inches above the desirable vegetation. Better results may be obtained when more of the weed is exposed to the herbicide solution. Weeds should be a minimum of 6 inches above the desirable vegetation. Adjust height of applicator to ensure adequate contact with weeds. Weeds not contacted by the herbicide solution will not be affected. Poor contact may occur when weeds are growing in dense clumps, in severe weed infestations or when weed height varies dramatically. In these instances, repeat treatments may be necessary.

Operate this equipment at ground speeds no greater than 5 miles per hour. Performance may be improved by reducing speed in areas of heavy weed infestations to provide adequate wiper saturation with the herbicide solution. Better results may be obtained when two applications are made in opposite directions.

Droplets, mist, foam or splatter of the herbicide solution settling onto desirable vegetation may result in discoloration, stunting or destruction. Avoid leakage or dripping onto desirable vegetation. Keep wiper surfaces clean. Be aware that on sloping ground the herbicide solution may migrate, causing spraying on the lower end and drying of the wicks on the upper end of the wiper applicator. Do not use wiper equipment when weeds are wet.

Mix only the amount of this product to be used during a 1-day period, as reduced product performance may result from use of solutions held in storage.

Clean wiper parts immediately after using this product by thoroughly flushing with water.

Do not add surfactant to the herbicide solution.

For Rope or Sponge Wick Applicators: Use solutions ranging from 33 to 75 percent of this product in water.

For Foam Applicators: Use solutions ranging from 33 to 100 percent of this product in water.
Injection Systems

This product may be used in a series of general injection spray systems. It may also be used as a liquid concentrate or diluted prior to injecting into the spray stream. Do not mix this product with the concentrate of other products for use in injection systems.

CDA Equipment

The rate of this product applied per acre by vehicle-mounted controlled droplet applicator (CDA) equipment must not be less than the amount specified in this label when applied by conventional broadcast equipment. For vehicle-mounted CDA equipment, apply in 2 to 15 gallons of water per acre.

For control of annual weeds with hand-held CDA units, apply a 20 percent solution of this product at a flow rate of 2 fluid ounces per minute and a walking speed of 1.5 mph (1 quart per acre). For the control of perennial weeds, apply a 20 to 40 percent solution of this product at a flow rate of 2 fluid ounces per minute and a walking speed of 0.75 mph (2 to 4 quarts per acre).

Controlled droplet applicators produce a spray pattern that is not easily visible. Extreme care must be taken to avoid spray drift onto the foliage or any other green tissue of desirable vegetation, as damage or destruction of the plant may result.

ANNUAL AND PERENNIAL CROPS (Alphabetical)

NOTE: This section gives general directions that apply to all crops listed alphabetically in the sections that follow. See the individual crop sections for specific instructions, preharvest intervals, and additional precautions and restrictions.

See the "Roundup Ready Crops" section of this label or separately published Supplemental Labeling for this product for instructions on treating Roundup Ready crops.

TYPES OF APPLICATIONS:

Chemical Fallow, Preplant Fallow Beds, Preplant, At-Planting, Preemergence, Hooded Sprayers in Row-Middles, Shielded Sprayers in Row-Middles, Wiper Application in Row-Middles, Post-Harvest.

GENERAL USE INSTRUCTIONS:

Apply this product during fallow intervals preceding planting, prior to transplanting, or preemergence to annual and perennial crops listed in this label, except where specifically limited. For any crop not listed in this label, applications must be made at least 30 days prior to planting. Unless otherwise specified, weed control applications may be made according to the rates listed in the "ANNUAL WEEDS," "PERENNIAL WEEDS," and "WOODY IRISH AND TIRE'S RATE SECTIONS" in this label. Specific rates of this product that are emphasized in this product's labeling to control tough weeds take precedence over the general rates in the "ANNUAL WEEDS" and "PERENNIAL WEEDS" RATE SECTIONS. Repeat applications may be made up to a maximum of 8 quarts of this product per acre per year.

Post-directed hooded sprayers and wiper applications capable of preventing all crop contact with herbicide solutions may be used in multicropped or unsychronized row-middle after crop establishment. Where specifically noted in the individual crop sections that follow, wipers may also be used above certain crops to control tall weeds. Refer to the "SELECTIVE EQUIPMENT" section of this label for essential precautions regarding crop injury. Crop injury is possible with these applications and shall be the sole responsibility of the applicator.

All labeled treatments may be made by aerial equipment where appropriate, provided that the applicator complies with the precautions and restrictions specified in this product's labeling. Refer to the "AERIAL EQUIPMENT" section of this label for additional information.

GENERAL PRECAUTIONS, RESTRICTIONS:

Avoid contact of this herbicide with foliage, green shoots or stems, bark, exposed roots (including those emerging from plastic mulch), or fruit of crops as severe crop injury or destruction may result. When making at-planting and pre-emergence applications, applications must be made before crop emergence to avoid severe crop injury. Broadcast applications made at emergence will result in injury or death of emerged seedlings. Apply before seed germination in coarse sandy soils to further minimize the risk of injury. Unless otherwise specified in this product's labeling, treatments with selective equipment including wipers and hooded sprayers must be made at least 14 days prior to harvest. POST-HARVEST OR FALLOW applications must be made at least 30 days prior to planting any crops not listed on this label. See "APPLICATION EQUIPMENT AND TECHNIQUES" section of this label for additional information.

In crops where spot treatments are allowed, do not treat more than 10 percent of the total field to be harvested. Crop sprayed in treated area will be killed. Take care not to spray or allow spray to drift outside the target area in order to avoid unwanted crop destruction.

For broadcast and emergency treatments, do not harvest or feed treated vegetation for 8 weeks following application, unless otherwise specified.

Cereal and Graze Crops

LABELED CROPS: Barley, Buckwheat, Millet (pear, proso), Oats, Rice, Rye, Quinoa, Tiff, Toscana, Triticale, Wheat (all types), and Wild rye.

PRECAUTIONS, RESTRICTIONS: Do not treat rice fields or levees when flooded. TYPES OF APPLICATIONS: These listed in "ANNUAL AND PERENNIAL CROPS" section of this label plus the following: Red Rice Control Prior to Planting Rice, Spot Treatment (Except Rice), Over-The-Top Wiper Application (Feed Barley and Wheat only), Preharvest (Wheat) and Feed Barley Only.

Preplant, Preemergence, At-Planting

USE INSTRUCTIONS: This product may be applied before, during or after planting of cereal crops. Applications must be made prior to crop emergence.

TANK MIXTURES: Use a tank mix with Amin may be used.

Red Rice Control Prior to Planting Rice

USE INSTRUCTIONS: Apply 1.5 quarts of this product in 5 to 10 gallons of water per acre. Flash fields prior to application to obtain uniform germination and stand of red rice. Make application when the majority of the red rice plants are at the 2-leaf stage and no more than 4 inches tall. Red rice plants with less than 2 true leaves may be only partially controlled.

PRECAUTIONS, RESTRICTIONS: Avoid spraying during conditions of low humidity, as reduced control may result. Do not treat rice fields or levees when the fields contain floodwater. Do not flood treated fields for 8 days following application.

Spot Treatment (Except Rice)

USE INSTRUCTIONS: This product may be applied as a spot treatment in cereal crops. Apply this product before hoisting in small grains.

PRECAUTIONS, RESTRICTIONS: Do not treat more than 10 percent of the total field area to be harvested. Crop sprayed in treated area will be killed. Take care not to spray or allow spray to drift outside target area to avoid unwanted crop destruction.

Over-the-Top Wiper Application (Feed Barley and Wheat only)

USE INSTRUCTIONS: Wiper applications may be used in wheat and feed barley. To control common rye or cereal rye, apply after the weeds have headed and achieved maximum growth.
PRECAUTIONS, RESTRICTIONS: Allow at least 35 days between application and harvest. Do not use roller applicators. Dropkets, mist, foam or splatter of the herbicide solution settling onto desirable vegetation may result in discoloration, standing or destruction.

PREHARVEST (Treated Barley And Wheat Only)

USE INSTRUCTIONS: This product provides weed control when applied prior to harvest of treated barley or wheat. For wheat, apply after the hard-dough stage of grain (30 percent or less grain moisture). For feed barley, apply after the hard-dough stage and when the grain contains 20 percent moisture or less. Stubble may be grazed immediately after harvest.

For ground applications, apply this product in 10 to 20 gallons of water per acre. For aerial applications, apply this product in 3 to 10 gallons of water per acre.

PRECAUTIONS, RESTRICTIONS: Do not apply more than 1 quart of this product per acre. Allow 7 days between application and harvest or grazing. Preharvest application is not specified for barley or wheat grown for seed, as a reduction in germination or vigor may occur.

POST HARVEST

USE INSTRUCTIONS: This product may be applied after harvest of corn crops. Higher rates may be required for control of large weeds that were growing in the crop at the time of harvest. Tank mixtures with 2,4-D or dicamba may be used.

PRECAUTIONS, RESTRICTIONS: For any crop not listed on this label, applications must be made at least 30 days prior to planting the next crop. Allow a minimum of 7 days between treatment and harvest or feeding of treated vegetation.

CORN

TYPES OF CORN: Field corn. Seed corn, silage corn, sweet corn and popcorn.

TYPES OF APPLICATION: Those listed in "ANNUAL AND PERENNIAL CROPS" section of this label, plus the following: Postharvest, Preplanting, Preemergence.

USE INSTRUCTIONS: This product may be applied alone or in a tank mixture before, during or after planting corn. Applications must be made prior to crop emergence.

TANK MIXTURES: This product may be tank-mixed with the following products to provide residual weed control, a broader weed control spectrum or an alternate mode of action. Ensure that the specific product is registered for application prior to planting corn. For ground applications, apply these tank mixtures in 10 to 20 gallons of water or 10 to 60 gallons of nitrogen per acre.

For tough-to-control annual weeds such as tall panicum, barnyardgrass, crabgrass, shattercane and broadleaf signalgrass up to 2 inches tall, and Pennsylvaniasmartweed up to 6 inches tall, apply this product at 2 pints per acre in these tank mixtures. For other labeled annual weeds, apply 1.5 to 2 pints of this product per acre when weeds are less than 6 inches tall, and 2 to 3 pints per acre when weeds are over 6 inches tall. When using nitrogen solutions as the carrier, use rate may need to be increased for acceptable weed control.

PRECAUTIONS, RESTRICTIONS: Applications of 2,4-D or dicamba must be made at least 7 days prior to planting corn. For more information see the "TANK MIXTURES" and "TANK MIXING PROCEDURES" sections of this label.

For southern states, do not apply in nitrogen solutions to tough-to-control grasses such as barnyardgrass, tall panicum, broadleaf signalgrass, annual pennisetum and any perennial weeds. The area covered by this recommendation includes Illinois and Indiana south of Route 53, and the following states: Alabama, Arkansas, Delaware, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, New Jersey, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia and West Virginia.

HOEDED SPRAYERS

USE INSTRUCTIONS: This product may be applied with hooded sprayers for weed control between rows of corn. Only hooded sprayers that completely enclose the spray pattern may be used. See additional instructions for the use of hooded sprayers in the "APPLICATION EQUIPMENT AND TECHNIQUES" section of this label.

PRECAUTIONS, RESTRICTIONS: Corn must be at least 12 inches tall, measured without extending leaves. Contact of this product in any manner to any vegetation to which treatment is not intended may cause damage. Such damage shall be the sole responsibility of the applicator. Do not apply more than 1 quart of this product per acre for each application and no more than 3 quarts per acre per year for hooded sprayer applications.

SPOT TREATMENT

USE INSTRUCTIONS: This product may be applied as a spot treatment prior to wilting of corn.

PRECAUTIONS, RESTRICTIONS: Do not treat more than 10 percent of the total field area to be harvested. Crop sprayed in the treated area will be killed. Take care not to spray or to allow spray to drift outside target area to avoid unwanted crop destruction.

PREHARVEST

USE INSTRUCTIONS: Make applications at 35 percent grain moisture or less. Ensure that maximum kernel fill is complete and the corn is physiologically mature (black layer formed). For ground applications, apply up to 3 quarts of this product per acre. For aerial applications, apply up to 2 quarts of this product per acre.

PRECAUTIONS, RESTRICTIONS: Allow a minimum of 7 days between application and harvest. Preharvest application is not allowed for corn grown for seed, as a reduction in germination or vigor may occur.

POST-HARVEST

USE INSTRUCTIONS: This product may be applied after harvest of corn. Higher rates may be required for control of large weeds that were growing in the crop at the time of harvest. Tank mixtures with 2,4-D or dicamba may be used.

PRECAUTIONS, RESTRICTIONS: Allow a minimum of 7 days between treatment and harvest or feeding of treated vegetation.
**Cotton**

**TYPES OF APPLICATIONS:** These listed in "ANNUAL AND PERENNIAL CROPS" section of this label plus the following: Selective equipment, Spot treatment, Preharvest.

Use directions for cotton containing the Roundup Ready gene are in the "ROUNDUP READY CROPS" section of this label.

**Preplant, Al-Planting, Premergerence**

**USE INSTRUCTIONS:** This product may be applied before, during or after planting cotton. Applications must be made prior to crop emergence.

**TANK MIXTURES:** This product may be tank-mixed with the following products provided that the specific product being used is registered for application prior to planting cotton. Apply these tank mixtures in 10 to 20 gallons of water per acre.

- Caparol®
- Clarity™
- Command®
- Cotton PRO®

**PRECAUTIONS, RESTRICTIONS:** For more information see the "TANK MIXTURES" and "TANK MIXING PROCEDURES" sections of this label.

**Selective Equipment**

**USE INSTRUCTIONS:** This product may be applied through hooded sprayers, shielded sprayers or spot sprayer and in cotton. Additional instructions on the use of selective equipment are found in the "APPLICATION EQUIPMENT AND TECHNIQUES" section of this label.

**PRECAUTIONS, RESTRICTIONS:** Allow at least 7 days between application and harvest.

**Spot Treatment**

**USE INSTRUCTIONS:** This product may be applied as a spot treatment in cotton prior to boll opening.

**PRECAUTIONS, RESTRICTIONS:** Do not treat more than 30 percent of the total field area to be harvested. Crop sprayed in the treated area will be killed. Take care not to spray into or allow spray to drift outside target area to avoid unwanted crop destruction.

**Preharvest**

**USE INSTRUCTIONS:** This product provides weed control and cotton regrowth inhibition when applied prior to harvest of cotton. For weed control, apply at rates given in the "ANNUAL WEEDS" and "PERENNIAL WEEDS RATE SECTIONS" of this label. For cotton regrowth inhibition, apply 1 pint to 2 quarts of this product per acre.

Up to 2 quarts of this product may be applied after sufficient pods have developed to produce the desired yield of cotton. Applications made prior to this time could affect maximum yield potential.

**TANK MIXTURES:** This product may be tank mixed with DFP™, Flexx™, Ginstar, or Prowl™ to provide additional enhancement of cotton last drop.

**PRECAUTIONS, RESTRICTIONS:** Allow a minimum of 7 days between application and harvest of cotton. Preharvest application is not allowed for cotton grown for seed, as a rotation in germination or vigor may occur. THE USE OF ADDITIVES FOR PREHARVEST APPLICATION OF THIS PRODUCT TO COTTON IS PROHIBITED. For more information, see the "TANK MIXTURES" and "TANK MIXING PROCEDURES" sections of this label.

**Follow Systems**

**LABELD CROPS:** This product may be applied during the fallow period prior to planting or emergence of any crop listed on this label; for non-listed crops, applications must be made at least 30 days prior to planting.

**TYPES OF APPLICATIONS:** Chemical Follow, Preplant Follow Beds, AID-TO-Tillage.

**Chemical Follow**

**USE INSTRUCTIONS:** This product may be used as a substitute for tillage to control annual weeds in fallow fields. Also, broadcast or spot treatments will control or suppress many perennial weeds in fallow fields. Tank mixtures of this product with 2,4-D and dicamba may be used for a broader weed control spectrum. Applications up to 3 quarts per acre may be made by aerial or ground application onto fallow sites where there is sufficient buffer to prevent injury due to drift onto adjacent crops.

**PRECAUTIONS, RESTRICTIONS:** Do not apply dicamba tank mixtures by air in California. Refer to the specific product labels for crop rotation restrictions and cautionary statements of all products used in tank mixtures. Some crop injury may occur if dicamba is applied within 45 days of planting.

**Preplant Follow Beds**

**USE INSTRUCTIONS:** This product will control weeds listed in the "ANNUAL WEEDS", "PERENNIAL WEEDS" and "WOODY BRUSH AND TREES RATE SECTIONS" of this label prior to planting.

**TANK MIXTURES:** Use 12 fluid ounces of this product, plus 2 to 3 fluid ounces of GnS™, per acre to control the following weeds up to the maximum height, diameter or length indicated: 3" — common chesnwoood, chickweed, groundsel; 2" — Lactin rackel, shoshephosphate.

Use 16 fluid ounces of this product, plus 2 to 3 fluid ounces of GnS™, per acre to control the following weeds up to the maximum height, diameter or length indicated: 6" — common chesnwoood, groundsel, marestail (Conyza canadensis), 12" — chickweed, Lactin rackel, shoshephosphate.

**AID-TO-Tillage**

**USE INSTRUCTIONS:** This product may be used in combination with tillage practices, in fallow systems or preplant to labeled crops to control downy brome, cheat, volunteer wheat, tansy mustard and foxtail. Apply 12 fluid ounces of this product in 5 to 10 gallons of water per acre before weeds are 6 inches in height. Application must be followed by conventional tillage practices no later than 15 days after treatment and before reentry occurs. Allow at least 1 day after application before tillage.

**PRECAUTIONS, RESTRICTIONS:** Tank mixtures with residual herbicides may result in reduced product performance.

**Grain Sorghum (Milo)**

**TYPES OF APPLICATIONS:** Those listed in "ANNUAL AND PERENNIAL CROPS" section of this label plus the following: Spot treatment, Over-the-Top Wiper Application, Preharvest.

**Preplant, Al-Planting, Premergerence**

**USE INSTRUCTIONS:** This product may be applied alone or in tank-mixture before, during or after planting grain sorghum. Applications must be made prior to crop emergence.

**TANK MIXTURES:** Apply these tank mixtures in 10 to 20 gallons of water or 10 to 60 gallons of nitrogen solution per acre, provided that the specific product being used is labeled for application prior to planting grain sorghum.

- Arazine
- Bamp II Magnum
- Bullet
- Dual II Magnum
- IntiRho
- Lariat
- Micro-Tech
For tough-to-control annual weeds such as fall panicum, barnyardgrass, crabgrass, shattercane and broadleaf signalgrass up to 2 inches tall, and Pennsylvania smartweed up to 6 inches tall, apply a tank mixture of this product at 2 gallons acre plus the products listed above. For more information see the "TANK MIXTURES" and "TANK MIXING PROCEDURES" sections of this label.

For other labeled annual weeds, apply 1.5 to 2 pints of this product per acre when weeds are less than 6 inches tall, and 2 to 3 pints per acre when weeds are over 6 inches tall. When using surfactant solutions as the carrier, the use rate may need to be increased for acceptable weed control.

Spot Treatment, Over-the-Top Wiper Application

USE INSTRUCTIONS: This product may be applied as a spot treatment in grain sorghum before heading. This product may be applied with wiper applicators to control or suppress tall weeds. For additional instructions, see "Wiper Applicators" in the "SELECTIVE EQUIPMENT" section of this label.

PRECAUTIONS, RESTRICTIONS: For spot treatment, do not treat more than 10 percent of the total field area to be harvested. Crop sprayed in treated area will be killed. Take care not to spray or to allow spray to drift outside target area to avoid unwanted crop destruction. Allow at least 40 days between wiper application and harvest. Do not use roller applicators. Do not feed or graze treated milo fodder. Do not ensile treated vegetation.

Hoed Sprayers

USE INSTRUCTIONS: This product may be applied with hoed sprayers for weed control between the rows of milo. Only hoed sprayers that completely encompass the spray pattern may be used. See additional instruction for the use of hoed sprayers in the "APPLICATION EQUIPMENT AND TECHNIQUES" section of this label.

PRECAUTIONS, RESTRICTIONS: Milo must be at least 12 inches tall, measured without extending leaves. Treat before milo sends tillers between the drill rows. If tillers are sprayed, the main plant may be damaged or destroyed. Contact of this product in any manner to any vegetation to which treatment is not intended may result in crop injury. The applicator has the sole responsibility for the applicator. Do not graze or feed milo forage or fodder following hoed sprayer applications. Do not apply more than 1 quart of this product per acre per application and no more than 3 quarts per acre per year for hoed sprayer applications.

Preharvest

USE INSTRUCTIONS: This product may be applied for weed control prior to harvest when sorghum grain has reached 30 percent grain moisture or less.

PRECAUTIONS, RESTRICTIONS: Do not apply more than 2 quarts of this product per acre. As with other herbicides that cause sudden plant death, avoid preharvest applications of this product to milo infected with charcoal rot as lodging may occur. Allow a minimum of 7 days between application and harvest of grain sorghum. Preharvest application is not specified for sorghum grown for silage, as a reduction in germination or vigor may occur. The use of this product for preharvest grain sorghum (milo) is not registered in California.

Post-Harvest

USE INSTRUCTIONS: This product may be applied after harvest of grain sorghum. Higher rates may be required to control large weeds that are growing in the field at the time of harvest. Tank mixtures with 2, 4-D or dicamba may be used.

This product may be applied to grain sorghum (milo) stubble following harvest to suppress or control regrowth. Apply 1 quart of this product per acre for crop control, or 1.5 pints per acre for suppression.

PRECAUTIONS, RESTRICTIONS: Allow a minimum of 7 days between treatment and harvest or feeding of treated vegetation.

Herbs and Spices

LABELED CROPS: Alfalfa, Angelica, Star anise, Ammi (seed), Basil, Basra, Basris, Carnations, Caper bush, Caraway, Black caraway, Gentian, Cassia bark, Cassia buds, Catech, Catnip, Catnip seed, Chervil (dried), China, Chinese chive, Cinnamon, Clary, Clove buds, Coriander leaf (cilantro or Chinese parsley), Coriander seed (cilantro), Costmary, Cynara (leaf), Cynara (seed), Camomile, Cumin (leaf), Dill (threw), Dill (seed), Fennel, Fennel seed (common and Florence), Fennugreek, White ginger flower, Grains of paradise, Horseradish, Hysop, Jubilee berry, Lavender, Lemongrass, Lovage (leaf and seed), Marx, Marigold, Marigold (including oregano), Mexican oregano, Mijaga flower, Mustard (seed), Nutmeg, Nutmeg (seed), Parsley (dried), Pennyroyal, Pepper (black and white), Pepper leaves, Peppermint, Pimento, Poppy (seed), Rosemary, Rue, Saffron, Sage, Savory (summer and winter), Spearmint, Sweet lemon, Sweet marjoram, Sweet marjoram, Sweet marjoram, Thyme, Vanilla, Wintergreen, Woodruff, Wormwood.

TYPES OF APPLICATIONS: Those listed in "ANNUAL AND PERENNIAL CROPS" section of this label plus the following: Over-the-Top Wiper Application (Peppermint and Spearmint Only), Spot Treatment (Peppermint and Spearmint Only).

PRECAUTIONS, RESTRICTIONS: This product could cause crop injury. When applying this product prior to transplanting direct-seeding crops into plastic mulch, care must be taken to remove product residues from the plastic prior to transplanting. Residual product can be removed by a single 0.06-inch application of water, either by natural rainfall or by irrigation. Care should be taken to ensure that the very loose blossoms of the plastic mulch and does not enter transplant holes. Applications made at emergence will result in injury or death to emerged seedlings.

Over-the-Top Wiper Application, Spot Treatment (Peppermint and Spearmint Only)

USE INSTRUCTIONS: This product may be applied as a spot treatment or over the top of peppermint or spearmint with wiper applicators in peppermint and peppermint. Apply spot treatments on a spray-to-wet basis with hand-held equipment, such as backpack sprayers, pump-up pressure sprayers, hand-guns, hand-wands or any other hand-held or motorized spray equipment used to direct the spray solution to a limited area.

PRECAUTIONS, RESTRICTIONS: Allow at least 7 days between application and harvest. Further applications may be made in the same area at 30-day intervals. In spot treatment applications, no more than 10 percent of the total field area to be harvested should be treated at one time. Crop sprayed in treated area will be killed. Take care not to spray or allow spray to drift outside the target area to avoid unwanted area destruction. For wiper applications, contact of the herbicide solution with the crop may result in discoloration, stunting, or destruction.

Oil Seed Crops

LABELED CROPS: Berage, Buffalo gourd (seed), Carola, Cranberry, Flax, Jojoba, Lespezzia, Meanwheat, Mustard (seed), Rape, Safflower, Sesame, Sunflower.

Use directions for carola containing the Roundup Ready gene are in the "ROUNDUP READY CROPS" section of this label.

TYPES OF APPLICATIONS: Those listed in "ANNUAL AND PERENNIAL CROPS" section of this label.

USE INSTRUCTIONS: This product may be applied before, during or after planting oilseed crops listed in this section. Broadcast applications must be made prior to crop emergence. Wiper applicators or hoed sprayers may be used between the rows once the crop is established. See additional instructions of...
the use of selective equipment in the "APPLICATION EQUIPMENT AND TECHNIQUES" section of this label.

TANK MIXTURES: For sunflowers, a tank mixture with Prowl may be applied before, during, or after planting into conventionally tilled soil, a cover crop, established sod or previous crop residue.

PRECAUTIONS, RESTRICTIONS: For use with canola, do not apply more than 2 quarts of this product per acre. For use with sunflowers, do not apply more than 1 quart of this product per acre as a single preplant or preemergence application per year. Do not feed or graze sunflowers forage following application of this product.

Soybeans

TYPES OF APPLICATIONS: Those listed in "ANNUAL AND PERENNIAL CROPS" section of this label plus the following: Spot Treatment, Preharvest, Selective Equipment.

Use directions for soybeans containing the Roundup Ready gene are in the "ROUNDUP READY CROPS" section of this label.

Preplant, At-Planting, Preemergence

USE INSTRUCTIONS: This product may be applied alone or in a tank-mixture before, during or after planting soybeans. Applications must be made prior to crop emergence.

TANK MIXTURES: This product may be tank-mixed with the following products to provide residual weed control, a broader spectrum, or an alternate mode of action. Ensure that the specific product being used in the tank mixture is registered for application prior to planting soybeans, and follow all label directions of all products in the tank mixture. Apply these tank mixtures in 10 to 20 gallons of water per acre.

Valan™

For tough-to-control annual weeds such as tall parsnip, bursaraygrass, crabgrass, smartweed, and broadleaf signalgrass up to 2 inches tall, and Pennsylvania smartweed up to 6 inches tall, apply this product at 2 pints per acre in these tank mixtures. For other labeled annual weeds, apply 1.5 to 2 pints of this product per acre when weeds are less than 6 inches tall, and 2 to 3 pints per acre when weeds are over 6 inches tall. For more information, see the "TANK MIXTURES" and "TANK MIXING PROCEDURES" sections of this label.

Spot Treatment

USE INSTRUCTIONS: This product may be applied as a spot treatment prior to initial post set in soybeans.

PRECAUTIONS, RESTRICTIONS: Do not treat more than 10 percent of the total field area to be harvested. Crop sprayed in treated area will be killed. Take care not to spray or allow spray to drift outside the target area to avoid unwanted crop destruction.

Preharvest

USE INSTRUCTIONS: This product may be applied for weed control prior to harvest of soybeans after pods have set and lost all green color. Apply at rates given in the "ANNUAL WEEDS RATE SECTION" and "PERENNIAL WEEDS RATE SECTION." Crops should be taken to avoid excessive seed shatter losses due to ground application equipment.

PRECAUTIONS, RESTRICTIONS: Do not apply more than 5 quarts of this product per acre for preharvest applications. Do not apply more than 2 quarts of this product per acre by air. Allow a minimum of 7 days between application and harvest of soybeans. Do not graze or harvest treated hay or fodder for livestock feed within 25 days of last preharvest application. (If the application rate is 1 quart per acre or lower, the grazing restriction is reduced to 14 days after last preharvest application.) Preharvest application is not specified for soybeans grown for seed, as a reduction in germination or vigor may occur.

Selective Equipment

USE INSTRUCTIONS: This product may be applied through shielded or hooded sprayers, wiper applicators or sponge bars in soybeans. Additional instructions on the use of selective equipment are found in the "APPLICATION EQUIPMENT AND TECHNIQUES" section of this label.

PRECAUTIONS, RESTRICTIONS: Allow at least 7 days between application and harvest.

Sugarcane

TYPES OF APPLICATIONS: Those listed in "ANNUAL AND PERENNIAL CROPS" section of this label plus Spot Treatment, Sugarcane Hopping.

Preplant, At-Planting, Preemergence

USE INSTRUCTIONS: This product may be applied in or around sugarcane fields, or in fields prior to the emergence of plant cane.

PRECAUTIONS, RESTRICTIONS: Do not apply to vegetation in or around ditches, canals or ponds containing water to be used for irrigation.

Spot Treatment

USE INSTRUCTIONS: This product may be applied as a spot treatment in sugarcane. For control of volunteer or diseased sugarcane, apply a 1-percent solution of this product in water using a spray-to-wet technique. Volunteer or diseased sugarcane should have at least 7 new leaves.

PRECAUTIONS, RESTRICTIONS: Avoid spray contact with healthy sugarcane plants since severe damage or destruction may result. Do not feed or graze treated sugarcane foliage following application.

Fallow Treatments

USE INSTRUCTIONS: This product may be used as a replacement for tillage in fields that are lying fallow between sugarcane crops. This product may also be used to remove the last stubble of ramon cane. For removal of last stubble of ramon cane, apply 4 to 5 quarts of this product in 10 to 40 gallons of water per acre to new growth having at least 2 new leaves. Allow 7 or more days after application before tillage. Applications up to 2 quarts per acre may be made by aerial application in fallow sites where there is sufficient buffer to prevent drift into adjacent crops. Tank mixtures with 2,4-D and dicamba may be used.

Flooded Sprayers

USE INSTRUCTIONS: This product may be applied using hooded sprayers for weed control between the rows of sugarcane. See "APPLICATION EQUIPMENT AND TECHNIQUES" section of this label for additional use instructions.

PRECAUTIONS, RESTRICTIONS: Crop injury may occur when the foliage of treated weeds contact the crop. Do not apply this product when crop leaves are...
Vegetable Crops

**NOTE:** This "VEGETABLE CROPS" SECTION GIVES GENERAL DIRECTIONS THAT APPLY TO ALL VEGETABLE CROPS LISTED ALPHABETICALLY IN THE SECTIONS THAT FOLLOW. SEE THE INDIVIDUAL CROP CATEGORIES FOR SPECIFIC INSTRUCTIONS, PREHARVEST INTERVALS, PRECAUTIONS AND RESTRICTIONS.

**TYPES OF APPLICATIONS:** Chemical Fallow, Preplant Fallow Beds, Preplant At-Planting, Preemergence, Prior to Transplanting Vegetables, Hand Sprayers in Row-Middles, Slitand Sprayers in Row-Middles, Wiper Application in Row-Middles, Post-Harvest, Selective Equipment Applications (Nonleaching Surfactants), Over-the-Top Wiper Application (Routinely only), Spot Treatment or Preharvest (Dry Beans, Peas, Lentils, and Chickpeas only).

**PRECAUTIONS, RESTRICTIONS:** This product could cause crop injury. When applying this product prior to transplanting or direct-seeding crops into plastic mulch, care must be taken to remove product residues from the plastic prior to planting. Residual product can be removed by a single 0.5-inch application of water, either by natural rainfall or by irrigation. Care should be taken to ensure that the wastewater flushes off the plastic mulch and does not enter transplanted holes. Applications made at emergence will result in injury or death to emerged seedlings.

Avoid contact of herbicide with foliage, green shoots or stems, bark, exposed roots (including those emerging from plastic mulch), or fruit of crops because severe crop injury or destruction may result. When making preemergence and at-planting applications, applications must be made before crop emergence to avoid severe crop injury. Apply before seed germination in coarse sandy soils to further minimize the risk of crop injury. In crops with vines, hand-sprayed, shielded sprayer and wiper applications to rows middles should be made prior to vine development. Otherwise severe injury or destruction may result. Unless otherwise specified in this product's labeling, treatments with selective equipment including wipers and hand-sprayed sprayers must be made at least 14 days prior to harvest. Post-Harvest or follow applications must be made at least 30 days prior to planting any non-labeled crop. See "APPLICATION EQUIPMENT AND TECHNIQUES" section of this label for additional information.

**Brassicas Vegetables**

**LABELLED CROPS:** Broccoli, Chinese broccoli (gai lo), Broccoli raab (rapini), Brussels sprouts, Cabbage, Chinese cabbage (bok choy), Chinese cabbage (napa), Chinese mustard cabbage (gai choi), Cauliflower, Cabbage brocoli, Collards, Kale, Kohlrabi, Mustards, Mustard greens, Mustard spinach, Rape greens.

**Bulb Vegetables**

**LABELLED CROPS:** Garlic, Green-headed garlic, Leek, Onion (dry bulb and green), Welsh onion, Shallot.

**Cucurbits Vegetables and Fruits**

**LABELLED CROPS:** Chayote (fruits), Chinese waxgourd (Chinese preserving melon), Chinese melon, Courser, Gherkin, Edible gourd (includes hyacinth, cucurbita, chichona, Chinese cukes), Melons (all), Momordica spp (includes talisman, balsam pear, bittermelon, Chinese cucumber), Mushrooms (includes cantaloupe, casaba, chayawew, golden purslane melon, honeydew melon, honey bell melon, mango melon, Persian melon, pinaephi melon, Santa Claus melon, snake melon), Pumpkins, Summer squash (includes creokneck squash, scallop squash, straightneck squash, vegetable marrow, zucchini), Winter squash (includes butternut squash, calabaza, hubbard squash, acorn squash, spaghetti squash), Watermelon.
### PRECAUTIONS, RESTRICTIONS

**For Certain Crops:**
- **Cassava:** avoid planting within 7 days of harvest.
- **Potato:** avoid planting within 30 days of harvest.
- **Tomato:** avoid planting within 7 days of harvest.
- **Watermelon:** avoid planting within 7 days of harvest.
- **Yam:** avoid planting within 7 days of harvest.

**For Leafy Vegetables:**
- **Arugula:** exclude from planting within 7 days of harvest.
- **Chicory:** exclude from planting within 7 days of harvest.
- **Endive:** exclude from planting within 7 days of harvest.
- **Endives:** exclude from planting within 7 days of harvest.
- **Lettuce:** exclude from planting within 7 days of harvest.
- **Spinach:** exclude from planting within 7 days of harvest.

**For Root and Tubers:**
- **Beet:** avoid planting within 7 days of harvest.
- **Carrot:** avoid planting within 7 days of harvest.
- **Celery:** avoid planting within 7 days of harvest.
- **Potato:** avoid planting within 7 days of harvest.
- **Rutabaga:** avoid planting within 7 days of harvest.

**For Miscellaneous Crops:**
- **Avocado:** avoid planting within 7 days of harvest.
- **Tomato:** avoid planting within 7 days of harvest.

**For Seedling Establishment:**
- **Dry Beans:** exclude from planting within 7 days of harvest.
- **Dry Peas, Lentils:** exclude from planting within 7 days of harvest.
- **Chickpeas:** exclude from planting within 7 days of harvest.

**Select Equipment Applications (Non-Bearing Gingko only):**
- Use equipment for application in established non-bearing gingko.
- Equipment may be used with boom equipment, GSA, shielded sprayers, hand-held backpack sprayers, frames, and other equipment on wiper application equipment.

**Over-the-Top Wiper Application (Rutabagas only):**
- Use equipment to reduce the possible contact of the herbicide solution onto desirable vegetation may result in discoloration, stunting or destruction.

**Miscellaneous Crops:**
- **Aloe vera:** 400
- **Artichokes:** 200
- **Avocado:** 200
- **Chinese cabbage:** 200
- **Lettuce:** 200
- **Spinach:** 200
- **Tomato:** 200

**Seedling Establishment:**
- Follow the recommendations listed in the table below.
- Only one application per year may be made; do not combine a preharvest spray with a spot treatment on the same crop area.
- Employ at least a 30-day plant-back interval between treatments and replanting for any crop not specified for treatment in this label.
- Do not feed treated vines and hay from these crops to livestock.
- Do not treat cover crops or field (weed) pastures, since these crops are considered to be grown as livestock feed.
- Preharvest application is not intended for dry legumes grown for seed, as a reduction in germination or vigor may occur.
Injury or destruction may result. Unless otherwise specified in this product's labeling, treatments with selective equipment including wipers and hooded sprayers must be made at least 14 days prior to harvest. Post-Harvest or fall applications must be made at least 30 days prior to planting any crop not listed on this label. See additional information in the "APPLICATION EQUIPMENT AND TECHNIQUES" section of this label.

General Weed Control, Site Preparation

USE INSTRUCTIONS: This product may be applied for general weed control or for site preparation prior to planting or transplanting crops listed in this section.

PRECAUTIONS, RESTRICTIONS: This product could cause crop injury when applied prior to transplanting or direct-seeding crops into plastic mulch. Crops must be taken to remove residues of this product from the plastic prior to planting. Residual product can be removed by a single 0.5-inch application of water, either by natural rainfall or by irrigation. Crops should be taken to ensure that the wash water flushes off the plastic mulch and does not enter transplant holes. Allow at least 25 days between residue removal and transplanting. Applications made at emergence will result in injury or death to emerged seedlings. Do not apply within a week before the first asparagus spears emerge. Do not feed or prune treated pineapple forage following application.

Spot Treatment (Asparagus)

USE INSTRUCTIONS: This product may be applied immediately after cutting, but prior to the emergence of new spears.

PRECAUTIONS, RESTRICTIONS: Do not apply more than 10 percent of the total field area to be harvested. Do not harvest within 5 days of treatment.

Post-Harvest (Asparagus)

USE INSTRUCTIONS: This product may be applied after the last harvest and all spears have been removed. If spears are allowed to regrow, delay application until forms have developed. Delayed treatments should be applied as a directed or shielded spray in order to avoid contact of the spray with stems, stumps or stumps. See additional instructions under "Selective Equipment" in the "APPLICATION EQUIPMENT AND TECHNIQUES" section of this label.

PRECAUTIONS, RESTRICTIONS: Direct contact of the spray with asparagus may result in serious crop injury.

TREE, VINE, AND SHRUB CROPS (Alphabetical)

NOTE: THIS SECTION GIVES GENERAL DIRECTIONS THAT APPLY TO ALL TREE, VINE, AND SHRUB CROPS LISTED ALPHABETICALLY IN THE SECTIONS THAT FOLLOW. SEE THE INDIVIDUAL CROP CATEGORIES FOR SPECIFIC INSTRUCTIONS, PREHARVEST INTERVALS, PRECAUTIONS AND RESTRICTIONS.

TYPES OF APPLICATIONS: Preplant (site preparation) Broadcast Sprays, General Weed Control. Mushrooms (within rows of trees, vines or bushes); Strips (within rows of trees, vines or bushes); Selective Equipment (as needed sprayers, wiper treatments), Directed Spray, Spot Treatment, Perennial Grass Suppression, Cut Stumps.

This product may be applied with boom equipment. CDA equipment, shielded sprayers, hand-held and backpack wands, bines, orchard guns or with sprayer applicator equipment, unless prohibited in the specific crop sections that follow.

GENERAL USE INSTRUCTIONS: This product may be applied in mushroom within rows of trees or vines), strips (within rows of trees or vines), and for general weed control or perennial grass suppression in established tree fruit and nut groves, orchards, berries, and vineyards. It may also be used for site preparation prior to planting or transplanting those crops. Apply 1 pint to 5 quarts per acre according to the "ANNUAL WEEDS" and "PERENNIAL WEEDS RATE SECTIONS" of this label. Use the higher rates in the specified range when weeds are stressed, growing in dense populations or are greater than 12 inches tall. Repeat applications may be made up to a maximum of 10.8 quarts per acre per year. See the "GENERAL INFORMATION" section of this label for more information on Maximum Annual Use Rates.

GENERAL PRECAUTIONS, RESTRICTIONS:

Use extreme care to avoid contact of this herbicide solution, spray, drift or mist with foliage or green bark of trunks, branches, suckers, fruit or other parts of trees, vines and bushes. Avoid applications when recent pruning wounds or other mechanical injury has occurred. Contact of this product with other than matured brown bark can result in serious crop damage or destruction. Only shielded or directed sprayers may be used in crops with potential for crop contact, and only where there is sufficient clearance. For applications in strips (within rows of trees), only selective equipment (directed sprays, hooded sprayers, shielded applicators, or wipers) should be used or in order to minimize the potential for overspray or drift of this product onto the crop. For berry crops, hooded or shielded sprayers must be fully enclosed including top, sides, front and back. Only wipers or shielded applicators capable of preventing all contact with the crop may be used. See additional instructions and precautions in the "APPLICATION EQUIPMENT AND TECHNIQUES" section of this label.

Allow a minimum of 3 days between application and transplanting.

MIDDLES (between rows)

USE INSTRUCTIONS: This product will control or suppress annual and perennial weeds and ground covers growing between rows of trees and grape vines listed on this label. If weeds are in drought stress, irrigate prior to application. Reduced weed control may result if weeds have been recently mowed at the time of application.

TANK MIXTURES: A tank mixture of this product plus Goal 2XL may be applied for annual weed control between rows (middles) of citrus crops, tree fruits, tree nuts and vine crops. This mixture is specified when weeds are stressed or growing in dense populations. Application of 16 to 32 fluid ounces of this product per acre plus 3 to 12 fluid ounces of Goal 2XL per acre will control annual weeds with a maximum height, length or diameter of 6 inches, including crabgrass, common groundsel, yellowstem, common lambsquarters, control yellowstem, Lien- don nettle, common ragweed, shepherdspurse, annual swellhead, thistle (supression), horseweed/marestail (Conyza canadensis), stinging nettle and common purslane (suppression). This tank mixture will also control common chenopod (male) or hairy fleabane (Conyza bonariensis) with a maximum height, length or diameter of 5 inches. Read and follow all labels and directions for use of all products being used in the tank mixture.

TANK MIXTURES (between rows)

TANK MIXTURES: This product may be applied within rows of tree or vine crops in tank mixtures with the following products, provided that the label of the specific product used permits the desired use:

- DuPont™ 50 SD
- Direct™ 4L
- Dinoseb™ 4L
- Gamma 2XL
- Liberty™ DF
- Kona™ 1
- Pristine™ 90
- Topgan® Callir™ 90
- ProMix

Do not apply these tank mixtures in Puerto Rico.

Refer to the individual product labels for information about specific crop rates, geographic restrictions and precautionary statements. For more information see
the "TANK MIXTURES" and "TANK MIXING PROCEDURES" sections of this label.

Perennial Grass Suppression

This product will suppress perennial grasses such as bahiagrass, Bermudagrass, tall fescue, orchardgrass, Kentucky bluegrass, and quackgrass that are growing on bare ground over crops and vine crops. For suppression of tall fescue, fine fescue, orchardgrass and quackgrass, apply 8 fluid ounces of this product in 10 to 20 gallons of water per acre. For suppression of Kentucky bluegrass covers, apply 6 fluid ounces of this product per acre. Do not use ammonium sulfate.

For best results, mow cool season grass covers in the spring to even their height and apply this product 3 to 4 days after mowing.

For suppression of vegetable growth and seedhead inhibition of bahiagrass for approximately 45 days, apply 6 fluid ounces of this product in 10 to 20 gallons of water per acre. Apply 1 to 2 weeks after fall growth-up or after mowing to a uniform height of 3 to 4 inches. This application must be made prior to seedhead emergence.

For suppression up to 120 days, apply 4 fluid ounces of this product per acre, followed by an application of 2 to 4 fluid ounces per acre about 15 days later. Make no more than 2 applications per year.

For burndown of Bermudagrass, apply 1 to 2 quarts of this product in 3 to 20 gallons of water per acre. Use this treatment only if reduction of the Bermudagrass stand can be tolerated. When burndown is required prior to harvest, allow at least 21 days to ensure sufficient time for burndown to occur.

For suppression of Bermudagrass, apply 6 to 16 fluid ounces of this product per acre east of the Rocky Mountains and 16 fluid ounces of this product per acre west of the Rocky Mountains. Apply in a total spray volume of 3 to 20 gallons per acre, no sooner than 1 to 2 weeks after fall growth-up. If the Bermudagrass is mowed prior to application, maintain a minimum of 3 inches in height. Sequential applications may be made when regrowth occurs and Bermudagrass injury and stand reduction can be tolerated. East of the Rocky Mountains, rates of 6 to 10 fluid ounces of this product per acre should be used in shaded conditions where a lesser degree of suppression is desired.

Cut Stump (tree crops)

USE INSTRUCTIONS: Cut stump applications of this product may be made during site preparation or site renovation, prior to transplanting tree crops. This product will control regrowth of cut stumps and regrowth of many types of tree species, some of which are listed below.

Citrus Trees: Calamondin, Chiriona, Citrus, Citrus hybrids, Grapefruit, Kumquat, Lemon, Lime, Mandarin (Fingers), Orange (a), Pummelo, Tangor (b), Tangor, Fram Tree: Apple, Applecot, Cherry (sweet, sour), Crabapple, Loquat, Mayhew, Orange, Olive, Pome, Plum/Persimmon (a), Quince.

Net Trees: Almond, Beachnut, Brazil nut, Butternut, Cashew, Chestnut, Cinkouhan, Fibrust (brazilnut), Hickery Nut, Macadamia, Pecan, Patache, Walnut (black, English). Apply this product using suitable equipment to ensure coverage of the entire cambrum. Cut trees or regrowth close to the soil surface. Apply at least 100 percent solution of this product to the freshly cut stump immediately after cutting. Delays in application may result in reduced performance. For best results, applications should be made during periods of active growth and full leaf expansion.

PRECAUTIONS, RESTRICTIONS: DO NOT MAKE CUT STUMP APPLICATIONS WHEN THE ROOTS OF ADJACENT DESIRABLE TREES MAY BE GRAFTED TO THE ROOTS OF THE CULTIVATED. INJURY RESULTING FROM ROOT GRAFTING MAY OCCUR IN ADJOINING TREES. Some species, stems, or trees may share the same root system. Adjacent trees having a similar age, height and spacing may signal shared roots. Whether grafted or shared, injury is likely to occur to non-treated stumps/bases when one or more trees sharing common roots are treated.

Berry Crops

Labeled crops: Blackberry (including blueberry, black salin berry, boysenberry, chokeberry, chokeberry, Cheyenne blackberry, boysenberry, cranberry, darrowberry, dewberry, Drunken thornless berry, Himalayaberry, hulberry, junberry, juneberry, lowrory, lowbush blueberry, marionberry, nectarberry, ollieberry, Oregon evergreen berry, phlomasinberry, rasberry, ravenberry, rasberry, Shewnee blackberry, and youngberry), Blueberry, Cranberry, currant, Elderberry, grapeberry, Hullberry, Loganberry, Salal, rasberry (black, red).

TYPES OF APPLICATIONS: Those listed in "TREES, VINE AND SHRUB CROPS" section of this label, plus Spot Treatment in Cranberry Production and Pre-Harvest Treatment in Cranberry Production.

PRECAUTIONS, RESTRICTIONS: To avoid damage, herbicide spray must not be allowed to contact desirable vegetation, including green shoots, canes, or foliage. Allow a minimum of 30 days between last application and harvest of cranberries. Allow a minimum of 14 days between last application and harvest of other berry crops.

Spot Treatment in Cranberry Production

USE INSTRUCTIONS: Spot treatments may be used to control weeds growing in dry ditches (interior and perimeter) of cranberry production areas. Hand-held sprayers or other appropriate application equipment listed under "APPLICATION EQUIPMENT AND TECHNIQUES" in this label may be used. Drop water level to remove standing water in ditches prior to application. With hand-held sprayers, use 5 to 10 percent solution of this product. Spray adequately to wet the vegetation only; do not spray to the point of runoff.

PRECAUTIONS, RESTRICTIONS: To achieve maximum weed control in treatments of dry ditches after water draw down, allow 2 or more days after treatment before reintroduction of water. Apply this product within 1 day after draw down to ensure application to actively growing weeds. Allow a minimum of 30 days between last application and harvest of cranberries. Do not make applications by air. Do not apply directly to water. Do not apply directly to water. Even though vines appear dormant, contact of the herbicide solution with desirable vegetation may result in damage or severe plant injury. Cranberry plants that are directly sprayed may be killed.

Post-Harvest Treatments in Cranberry Production

USE INSTRUCTIONS: Application of this product may be made after the harvest of cranberries to control weeds growing in the field. Apply this product to vines that appear dormant (after they have turned red). Hand-held sprayers, wipers, or other appropriate application equipment listed in the "APPLICATION EQUIPMENT AND TECHNIQUES" section of this label may be used. If using hand-held sprayers, use a 0.5 to 1 percent solution of this product. Spray adequately to wet the vegetation only; do not spray to the point of runoff. If using hand-held boom sprayers, apply 2 to 4 quarts of this product per acre.
Citrus

Labeled Crops: Calamondin, Chironja, Citron, Citrus Hybrids, Grapefruit, Kumquat, Lemon, Lime, Mandarin (tangerine), Orange (all), Pummelo, Satsuma Mandarin, Tangarine (up), Tangor.

Types of Applications: These listed in "Trees, Vine and Shrub Crops" section of this label.

Precautions, Restrictions: Allow a minimum of 1 day between last application and harvest in citrus crops. For citrus groves, apply as directed sprays only.

Use Instructions: The following use instructions pertain to applications in Florida and Texas only. For bumlow or control of weeds listed below, apply the specified rates of this product in 3 to 30 gallons of water per acre. Where weed foliage is dense, use 10 to 30 gallons of water per acre.

For granules, apply 2 to 3 quarts of this product in 20 to 30 gallons of water per acre when plants are actively growing. Use 2 quarts per acre when plants are less than 6 inches tall, and 3 quarts per acre when plants are greater than 6 inches tall. Use of this product in a tank mixture with Kovar M or Karmex may improve weed control. Refer to the individual product labels for treatment information on specific crops, rates, geographic restrictions and precautionary statements.

Miscellaneous Tree Food Crops

Labeled Crops: Cashew (fruit and nut), Pecan (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nut), Macadamia (nit...
**Bamascide (Banana Only)**

USE INSTRUCTIONS: This product may be used to destroy banana plants infected with the Banana Bunchy Top Virus, as well as non-infected banana plants in order to establish disease-free buffer strips around plantations. Remove all fruit from the plants within the treatment area prior to treatment. Inject 1/2 fluid ounce (1 mL) of this product’s concentrate per 2 to 3 inches of stem diameter. Make the injection at least one foot above the ground, except for very small plants, which should be injected vertically into the top. Any subsequent regrowth must also be destroyed. All plants and roots (or units) within a 4-foot radius around a treated plant should be mechanically destroyed.

For control of the Banana Bunchy Top Virus, it is critical that the grower follow a strict control program involving monitoring for diseased plants, spraying to control the aphid vector, and destruction of all infected units (or units). An infected plant may not show symptoms of the banana bunchy top virus for up to 125 days, therefore it is critical that the entire unit (or unit) containing the diseased plant be destroyed immediately.

PRECAUTIONS, RESTRICTIONS: Do not apply more than 1/2 fluid ounce (15 mL) of this product per unit (or units). Do not treat all units (or units) prior to treatment. Do not harvest any fruit or plant materials from treated units (or units) following injection. Do not allow livestock to consume treated plant materials. Following transplant of new banana plants into treated areas, allow plants to become established for 3 months before applying this product for general weed control.

**Vine Crops**

Labeled Crops: Grapes (raisin, table, wine), Hop, Kwi, Passion fruit.

Types of Applications: Those listed in "TREES, VINE AND SHRUB CROPS" section of this label.

Apply this product for weed control only when green shoots, canes or foliage are not in the spray zone.

In the northeast and Great Lakes region, apply this product to production grape vineyards prior to the end of the bloom stage of grapes in order to avoid crop injury, or apply using shielded sprayers or wiper equipment.

PRECAUTIONS, RESTRICTIONS: Allow a minimum of 14 days between last application and harvest of vine crops. Do not use selective equipment with kevlar.

**PASTURE GRASSES, FORAGE LEGUMES AND Rangelands**

General USE INSTRUCTIONS: Refer to the "ANNUAL WEEDS" and "PERENNIAL WEEDS RATE SECTIONS" of this label for rate recommendations for specific weeds. When applied as directed, this product will control annual and perennial grasses and broadleaf weeds. Specified rates of this product specified on this label for the control of tough weeds, or those specified on separate supplemental labeling for this product, supersede rates specified in the "ANNUAL WEEDS", "PERENNIAL WEEDS" and "WOODY BRUSH AND TREES RATE SECTIONS" of this label.

All labeled treatments may be made by aerial equipment where appropriate, provided that the applicator complies with the precautions and restrictions specified on this product’s label.

** Alfalfa, Clover, and Other Forage Legumes**

Labeled Crops: Alfalfa, Clover, Kafir, Kudzu, Latypedia, Lesceauxa, Lupin, Saft, Trefol, Velvet bean, Vetch (all types).

Types of Applications: Preplant, At-Planting, Preemergence, Preharvest (except Kenaf and Lesceauxa), Spot Treatment, Over-the-Top Wiper Application, Renovation, Stand Removal.

Use directions for alfalfa with the Roundup Ready gene are in the "ROUNDUP READY CROPS" section of this label.

**Preplant, At-Planting, Preemergence**

USE INSTRUCTIONS: This product may be applied before, during or after planting crops listed in this section. Applications must be made prior to crop emergence. PRECAUTIONS, RESTRICTIONS: Remove domestic livestock before application. The crop may be fed or grazed as soon as it reaches sufficient maturity.

**Preharvest (Except Kenaf and Lesceauxa)**

USE INSTRUCTIONS: This product may be used in desilting alfalfa stands or any stand of alfalfa where crop destruction is acceptable. This product will control annual or perennial weeds, including quackgrass, when applied prior to crop harvest. Applications may be made at any time of the year. For control of quackgrass, apply in the spring, late summer or fall when quackgrass is actively growing. Treatments for quackgrass must be followed by deep tillage for complete control.

PRECAUTIONS, RESTRICTIONS: Make only one application to an existing stand of crop per year. The treated crop and weeds can be harvested and fed to livestock according to the application rates and intervals defined below.

<table>
<thead>
<tr>
<th>Maximum single application rate (per acre)</th>
<th>Minimum interval between application and harvest or livestock grazing</th>
</tr>
</thead>
<tbody>
<tr>
<td>2 quarts</td>
<td>90 days</td>
</tr>
</tbody>
</table>

This application may destroy the alfalfa stand and may severely injure or destroy other labeled crops such as clover. Preharvest application is not specified for alfalfa grown for seed, as a reduction in germination or vigor may result.

**Spot Treatment, Over-the-Top Wiper Application**

USE INSTRUCTIONS: This product may be applied as a spot treatment or over the tops of crops listed in this section with wiper applications. For wipers, see "Wiper Applicators" in the "APPLICATION EQUIPMENT AND TECHNIQUES section of this label. Applications may be made in the same area at 30-day intervals.

PRECAUTIONS, RESTRICTIONS: For spot treatment and wiper applications, apply in areas where the movement of domestic livestock can be controlled. No more than 10 percent of the total field area should be treated at one time. Remove domestic livestock before application and wait 3 days after application before grazing livestock or harvesting.

**Renovation, Stand Removal**

USE INSTRUCTIONS: This product may be applied as a broadcast spray to remove established stands of alfalfa, clover, and other forage legumes listed on this label, if the crop is to be grazed or harvested for feed, use maximum of 2 quarts per acre of alfalfa and up to 3 quarts per acre of other labeled legumes. For complete removal of established stands of clover, it may be necessary to use treatment rates greater than this, as listed in the "PERENNIAL WEEDS RATE SECTION" of this label.

PRECAUTIONS, RESTRICTIONS: For applications up to 2 quarts per acre for alfalfa or 3 quarts per acre for all other forage legumes, remove domestic livestock before application, follow the minimum harvest or grazing intervals in the table above under Preharvest in this section. For treatment rates above those levels, do not graze or harvest treated foliage for livestock feed or allow grazing. Crops listed in this label may be planted into the treated area at any time, for all other crops, wait 30 days or more between application and planting.
Conservation Reserve Program (CRP)

Types of Applications: Creation of CRP; Site Preparation, Postemergence Weed Control in Dormant CRP Grasses, Over-the-Top Wiper Application.

Restrictions: This product may be used to prepare CRP land for crops production after federal, state or local use guidelines for CRP renovation requirements.

Precautions, Restrictions: Crops listed on this label may be planted into the treated area at any time for any other crop, wait at least 30 days between application and planting.

Postemergence Weed Control in Dormant CRP Grasses, Over-the-Top Wiper Application

Use Instructions: Apply this product to suppress competitive growth and seed production of undesirable vegetation on CRP land. Applications may be made using wiper applications to control tall weeds or as a broadcast or spot treatment to dormant CRP grasses. For selective applications with broadcast spray equipment, apply 12 to 16 fluid ounces per acre in early spring before desirable CRP grasses, such as crested and tall wheatgrass, break dormancy and initiate green growth. Late fall applications can be made after desirable perennial grasses have reached dormancy.

Precautions, Restrictions: Some planting of CRP perennial grasses will occur if broadcast applications are made when plants are not dormant. No waiting period is required between application and grazing or harvesting for feed. Do not apply more than 3 quarts per acre per year onto CRP land.

Grass Seed or Sod Production

Labeled Crops: Any grass (Gramineae family) except Corn, Sorghum, Sugarcane and those listed in the "CEREAL AND GRASS CROPS" section of this label.

Types of Applications: Preplant, Post-Planting, Preemergence, Renovation, Removal of Established Stands, Site Preparation, Shielded Sprayers, Over-the-Top Wiper Application, Spot Treatment, Creasing Rims in Annual Ryegrass, Preplant, Post-Planting, Preemergence, Renovation, Removal of Established Stands, Site Preparation.

Use Instructions: This product controls most existing vegetation prior to removing turf or forage grass seed areas or establishing turf grass grown for sod. It may be used to destroy undesirable grass vegetation when production of seed is converted to alternate species or crops. Make applications before, during, or after planting or for renovation. For maximum control of existing vegetation, delay planting to determine if any regrowth of escaped underground plant parts occurs. Where existing vegetation is growing under mowed turf management, apply this product after mowing at least one or more mowing to allow sufficient growth for good interception of the herbicide spray. Where repeated treatments are necessary, sufficient regrowth must be attained prior to application. For warm-season grasses, such as Bermudagrass, summer annual or other applications provide best results. Broadcast equipment may be used to control sod remnants or other unwanted vegetation after sod is harvested. Application rates of up to 5 quarts per acre may be used to totally remove established stands of tough to kill grass species.

Precautions, Restrictions: Do not disturb soil or underground plant parts before treatment. Tillage or renovation techniques such as vertical mowing, coring or rolling should be delayed for 7 days after application to allow proper translocation into underground plant parts. If application rate total 3 quarts per acre or less, no waiting period between treatment and feeding or livestock grazing is required. If the rate is greater than 3 quarts per acre, remove domestic livestock before application and wait 8 weeks after application before grazing or harvesting. For any crop not listed for treatment in this label, applications must be made at least 30 days prior to planting. Applications must be made prior to the crop emergence in order to avoid crop injury.

Shielded Sprayers

Use Instructions: Apply 1 to 3 quarts of this product as a broadcast spray in 10 to 20 gallons of water per acre to control weeds between grass seed rows. Uniform planting in straight rows aid in shielded sprayer applications. Best results are obtained when the grass seed crop is small enough to easily pass by or through the protective shields. See additional instructions on the use of shielded sprayers in the "APPLICATION EQUIPMENT AND TECHNIQUES" section.

Precautions, Restrictions: Droplets, mist, foam or splatter of the herbicide solution settling onto desirable vegetation may result in discoloration, stunting or destruction. Such damages shall be the sole responsibility of the applicator.

Over-the-Top Wiper Application

Use Instructions: This product may be applied over the top of desirable grasses using wiper applicators for the control of tall weeds. For additional instructions on the use of wiper applicators in the "APPLICATION EQUIPMENT AND TECHNIQUES" section.

Precautions, Restrictions: Droplets, mist, foam or splatter of the herbicide solution settling onto desirable vegetation may result in discoloration, stunting or destruction. Such damages shall be the sole responsibility of the applicator.

Spot Treatment

Use Instructions: Apply 1 to 1.5 percent solution of this product using hand-held spray equipment to control weeds within established vegetation prior to seeding of grasses grown for seed. Hand-held equipment may also be used to control sod remnants or other unwanted vegetation after seed is harvested.

Precautions, Restrictions: Apply this product prior to seeding of grasses. Do not treat more than 10 percent of the total field area. Crop sprayed in treated area will be killed. Take care not to spray or allow spray to drift outside the target area to avoid unwanted crop destruction. Hand-held equipment may be used to control sod remnants or other unwanted vegetation after seed is harvested.

Creating Rims in Annual Ryegrass

Use Instructions: Apply 10 to 20 fluid ounces of this product per acre. Best results are obtained when applications are made before ryegrass reaches 6 inches in height. Use the higher rate when the ryegrass is greater than 5 inches in height. Set nozzle heights to allow the establishment of the desired row spacing. Use of low-pressure nozzles, or drop nozzles designed to target the application over a narrow band are specified.

Precautions, Restrictions: Take care not to spray or allow droplets, spray lines, or drift to settle outside the treatment area to avoid unwanted crop destruction. Grower assumes all responsibility for crop losses from misapplication.

Pastures

Labeled Crops: Any grass (Gramineae family) except Corn, Sorghum, Sugarcane and those listed in the "CEREAL AND GRASS CROPS" section of this label, including Bahiagrass, Bermudagrass, Bluegrass, Bromegrass, Fescue, Guinea grass, Kikuyu grass, Orchidgrass, Panicum grass, Ryegrass, Timothy, Wheatgrass.

Types of Applications: Preplant, Preemergence, Postemergence Renovation, Spot Treatment, Over-the-Top Wiper Application, Postemergence Weed Control (Broadcast Treatments), Preplant, Preemergence, Pasture Renovation.

Use Instructions: This product may be applied for weed control prior to planting or emergence of forage grasses. This product may also be used to control perennial pasture species listed on this label prior to re-planting.
PRECAUTIONS, RESTRICTIONS. If application rates total 5 quarts per acre or less, no waiting period between treatment and feeding or livestock grazing is required. If the rate is greater than 3 quarts per acre, remove domestic livestock before application and wait 8 weeks after application before grazing or harvesting, for any crop not listed on this label, applications must be made at least 30 days prior to planting.

Spot Treatment, Over-the-Top Wiper Application

USE INSTRUCTIONS: This product may be applied in pastures as a spot treatment or over the top of desired grasses using wiper applicators to control tall weeds. Applications may be repeated in the same area at 30-day intervals. See additional instructions on the use of wiper applicators in the “APPLICATION EQUIPMENT AND TECHNIQUES” section.

PRECAUTIONS, RESTRICTIONS: For spot treatment and wiper application methods using rates of 3 quarts of this product per acre or less, the entire field or any portion of it may be treated. When spot treatments or wiper applications are made using rates above 3 quarts of this product per acre, no more than 10 percent of the field may be treated at any one time. To achieve maximum performance, remove domestic livestock before application and wait 7 days after application before grazing or harvesting for feed.

Postemergence Weed Control (Broadcast Treatments)

USE INSTRUCTIONS: This product may be applied to pastures to suppress competitive growth and seed production of annual weeds and undesirable vegetation. For selective applications with broadcast spray equipment, apply 12 to 16 fluid ounces of this product per acre in many spring before desirable perennial grasses break dormancy and initiate green growth. Late fall applications can be made after perennial grasses have reached dormancy.

PRECAUTIONS, RESTRICTIONS: Some spraying of perennial grasses will occur if broadcast applications are made when plants are not dormant. Use of higher application rates will cause stand reductions. If spraying in late fall, do not spray more than 3 quarts per acre per year onto pasture grasses except for renovation use described above in this section. If reapplication is needed due to severe stand reduction, wait at least 30 days after treatment prior to planting any crop not listed on this label.

Rangelands

TYPES OF APPLICATIONS: Postemergence.

USE INSTRUCTIONS: This product will control or suppress many annual weeds growing in perennial cool and warm-season grass rangelands. Preventing viable seed production is key to the successful control and invasion of annual grassy weeds in rangelands. Follow up applications in sequential years should eliminate most of the viable seeds. Grazing of treated areas should be delayed to encourage growth of desirable perennials. Allowing desirable perennials to flower and seed in the treated area will encourage successful transition.

Apply 12 to 16 fluid ounces of this product to control or suppress many weeds, including downy brome, cheatgrass, cereal rye and jointed goatgrass in rangelands. Apply when most mature brome plants are in early flower and before the plants, including seedheads, turn color. Allowing for secondary weed flushes to occur in the spring following rain events further depletes the seed reserve and encourages perennial grass conversion on weedy sites. Fall applications are specified where spring moisture is usually limited and fall germination allows for good weed growth.

For medusahead, apply 16 fluid ounces of this product at the 3-leaf stage. Delays applications beyond this stage will result in reduced or unacceptable control. Fire may be useful in eliminating the thatch layer produced by slow deceasing calms prior to application. Allow new growth to occur before spraying after a burn. Repeat applications in subsequent years may be necessary to eliminate the seedbank before reestablishing desirable perennial grasses in medusahead-dominated rangelands.

PRECAUTIONS, RESTRICTIONS: Slight discoloration of the desirable grasses may occur, but they will regreen and reestablish under moist soil conditions as affects of this product wear off. Do not use ammonium sulfate when spraying rangeland grasses with this product. No waiting period between treatment and feeding or livestock grazing is required. Do not apply more than 3 quarts of this product per acre per year.

ROUNDBUP READY CROPS

The following instructions or those published separately on supplemental labeling for this product include all applications of this product that can be made onto the specified Rounbdup Ready crops during the complete cropping season. DO NOT combine these treatment instructions with those for crops in the "ANNUAL AND PERENNIAL CROPS (ALPHABETICAL)" section of this label that do not contain the Rounbdup Ready gene, unless otherwise directed in this product's labeling.

AXSUSA, LLC RECOMMENDS USE OF THIS PRODUCT FOR POSTEMERGENCE (IN-CROP) APPLICATION ONLY ON CROPS DESIGNATED AS CONTAINING THE ROUNDBUP READY GENE. Applying this product to crops that are not designated as Rounbdup Ready will result in severe crop injury and yield loss. Avoid contact with foliage, green stems, or fruit of crops, or any desirable plants that do not contain the Rounbdup Ready gene, since severe plant injury or destruction will result.

The Rounbdup Ready designation indicates that the crop contains a patented gene that provides tolerance to this product. Information on Rounbdup Ready crops may be obtained from your seed supplier. Roundup Ready crops must be purchased from an authorized licensed seed supplier.

Sprayer Preparation: It is important that sprayer and mixing equipment be clean and free of pesticide residue before making applications of this product. Follow the cleaning procedures specified on the label of the product(s) previously used. Thoroughly clean the spray tank and all lines and filters to eliminate potential contamination from other herbicides prior to mixing and applying this product.

For ground broadcast applications: Apply this product in 5 to 20 gallons of spray solution per acre. Carefully select proper nozzle and spray pressure to avoid spraying a fine mist. For best results with ground application equipment, use flat spray nozzles. Check for even distribution of spray droplets. Tank mixtures of other herbicides, insecticides, fungicides, microorganisms or fertilizer nutrients result in reduced weed control or crop injury and are NOT specified for applications of this product over the top of Roundup Ready crops unless otherwise noted in this product label, or in separate supplemental labeling.
Unless otherwise directed, nonionic surfactant may be added to the spray solution for applications to Roundup Ready crops. The addition of certain surfactants to this product may result in some crop responses including leaf rolling, leaf chlorosis or leaf stippling due to the surfactant added to the spray mixture. Read and carefully observe cautionary statements and other information appearing on the surfactant label.

Ammonium sulfate may be mixed with this product for applications to Roundup Ready crops. Refer to the "MIXING" section for restrictions on the use of ammonium sulfate. Ensure that ammonium sulfate is completely dissolved in the spray tank before adding herbicides. Thoroughly rinse the spray system with clean water after use to reduce corrosion.

NOTE: The following instructions are based on a clean start at planting by using a burndown application or tillage to control existing weeds before crop emergence. In no-till and stale seedbed systems, a preplant-burn-down treatment of this product is specified to control existing weeds prior to crop emergence. Some weeds, such as black nightshade, broadleaf signalgrass, sicklepod, Texas panicle, randol, annual monolopsis, woody beggarweed, shattercane, wild poinsettia, hibiscus, and giant ragweed with multiple germination times, or suppressed (tillered) weeds may require a second application of this product for complete control. The second application should be made after some regrowth has occurred and at least 10 days after a previous application of this product.

Rates of this product specified in the following sections, or in separate supplemental labeling for this product on the control of tough weeds, supersede the general rates specified in the "ANNUAL WEEDS RATE SECTION" and the "PERENNIAL WEEDS RATE SECTION" of this label.

**Roundup Ready Alfalfa**

**TYPES OF APPLICATIONS:** Preplant, At-planting, Preemergence, Postemergence (In-crop).

**GENERAL USE INSTRUCTIONS:** Refer to the following table for the maximum application rates of this product.

<table>
<thead>
<tr>
<th>Application Rate</th>
<th>[ Annual Maximum Application Rates ]</th>
</tr>
</thead>
<tbody>
<tr>
<td>Combined total per year for all applications, including preplant during year of establishment</td>
<td>8 quarts per acre</td>
</tr>
<tr>
<td>Combined total per year for in-crop applications for newly established and established stands</td>
<td>6 quarts per acre</td>
</tr>
</tbody>
</table>

**GENERAL PRECAUTIONS AND RESTRICTIONS:** See the "ROUNDUP READY CROPS" section of this label for general precautionary instructions for use of this product in Roundup Ready crops. See the "GENERAL INFORMATION" section of this label for more information on "Annual Maximum Application Rates," refer to individual tank mixture product label for restrictions and precautions, use according to the most restrictive precautionary statements for each product in the tank mixture.

**Preplant, At-planting, Preemergence USE INSTRUCTIONS:** This product may be applied before, during or after planting alfalfa with a Roundup Ready gene, up to a maximum of 2 quarts per acre.

**Postemergence (In-crop)**

**USE INSTRUCTIONS:** Applications of this product may be made over the top of Roundup Ready alfalfa (in-crop) from emergence to 5 days prior to harvest. To maximize crop yield and quality potential, applications of this product should be made after weeds have emerged but before alfalfa growth or regrowth interfere with spray coverage of the target weeds.

Refer to the "ANNUAL WEEDS RATE SECTION" and "PERENNIAL WEEDS RATE SECTION" in this label for rate recommendations for specific weeds. When applied as directed, this product will control these annual and perennial grasses and broadleaf weeds. In addition to these weeds listed in these sections, this product will suppress the parasitic weed Dodder (Cuscuta spp.) in Roundup Ready alfalfa. Repeat applications may be necessary for complete control.

**Stand Establishment:** Due to the biology and breeding constraints of alfalfa, up to 10% of the seedlings may not contain a Roundup Ready gene and will not survive after the first application of this product. To eliminate the undesirable effects of stand gaps created by this loss of plants, a single application of this product per acre should be applied at or before the 4-to-6-leaf growth stage. Refer to the following table for maximum in-crop application rates during stand establishment (seedling year).

<table>
<thead>
<tr>
<th>Stand Establishment (Seedling Year)</th>
<th>Application Rates</th>
</tr>
</thead>
<tbody>
<tr>
<td>Prior to First Cutting</td>
<td>From emergence up to 4 trifoliate leaves: 1 to 2 quarts per acre; From 5 trifoliate leaves up to 5 days before first cutting: up to 2 quarts per acre</td>
</tr>
<tr>
<td>After First Cutting</td>
<td>In-crop application, up to 5 days before cutting: up to 2 quarts per acre</td>
</tr>
</tbody>
</table>

**Established Stands** Refer to the following table for maximum application rates for in-crop applications to established stands of alfalfa (non-germinating year).

<table>
<thead>
<tr>
<th>Established Stands Application Rates</th>
</tr>
</thead>
<tbody>
<tr>
<td>In-crop application, up to 5 days before cutting: up to 3 quarts per acre</td>
</tr>
</tbody>
</table>

**PRECAUTIONS, RESTRICTIONS:** Where Roundup Ready alfalfa is grown with a companion or cover crop, or is interplanted with a second species, in-crop (over-the-top) applications of this product will eliminate the glyphosate-tolerant species. Any single in-crop application of this product should not exceed 2 quarts per acre. Sequential applications of this product should be at least 7 days apart. The combined total per year for all in-crop applications in both newly established (seedling year) and established stands (non-germinating year) must not exceed 6 quarts per acre. Remove domestic livestock before application. Wait a minimum of 5 days after application before grazing, cutting and feeding of forage and hay.

**TANK MIXTURES:** This product may be tank mixed with the products listed below. Ensure that the specific product used is labeled for alfalfa application.

**Newly Seeded Stands and Stand Establishment:** For control of emerged annual grasses and broadleaf weeds, this product may be applied at up to 2 quarts per acre in a tank mixture with the following herbicides. Application should be made after weeds have emerged but before the alfalfa growth or regrowth interfere with spray coverage of the target weeds. 2,4-D - Buturon, Butylate Sulfometuron - Pastil Clethodim - Select 2EC Imazamox - Raptor

**Dormant Application and Winter Treatment:** For control of emerged annual grasses and broadleaf weeds, up to 2 quarts per acre of this product may be applied in a tank mixture with the following herbicides. Tank mixtures should be applied when the temperature for the day remains above freezing.

**Dormant Application**

Duron - chlorop, Xemmax DF and Duron BDF, Kerb 50W, Alfin Max Gold

**Winter Treatment**

Butoxone, Doran, Volpara, Alfin Max
PRECAUTIONS, RESTRICTIONS: Tank mixtures of this product with other herbicides, insecticides, or fungicides may result in crop injury or reduced weed control. Applications should not be made to frozen or snow-covered ground.

**Roundup Ready Canola (Spring)**

Roundup Ready spring canola is defined as those Roundup Ready canola varieties that are seeded in the spring and harvested in the fall and do not enter a winter dormancy period.

**Types of Applications:** Preplant, Pre-Planting, Preemergence, Postemergence (In-crop).

**DO NOT USE THIS PRODUCT ON CANOLA WITH THE ROUNDUP READY GENE PLANTED IN THE FOLLOWING STATES: ALABAMA, DELAWARE, FLORIDA, GEORGIA, KENTUCKY, MARYLAND, NEW JERSEY, NORTH CAROLINA, SOUTH CAROLINA, TENNESSEE, VIRGINIA AND WEST VIRGINIA. EXCEPT FOR USES IN WILDLIFE FOOD PLOTS THAT WILL NOT BE HARVESTED FOR HUMAN OR LIVESTOCK FOOD.**

**Annual Maximum Application Rates**

- Preplant, Pre-Planting, Preemergence applications: 2 quarts per acre
- Total in-crop application from emergence to 6-leaf stage: 1 quart per acre

**GENERAL PRECAUTIONS AND RESTRICTIONS:** See the "ROUNDUP READY CROPS" section of this label for general precautionary instructions for use of this product in Roundup Ready crops. See the "GENERAL INFORMATION" section of this label for more information on an "Annual Maximum Application Rate." Preplant, Pre-Planting, Preemergence.

**USE INSTRUCTIONS:** This product may be applied before, during or after planting, up to a maximum of 2 quarts per acre.

**Postemergence (In-crop)**

**USE INSTRUCTIONS:** This product may be applied postemergence to Roundup Ready spring canola from emergence through the 6-leaf stage of development. Applications made during bolting or flowering may result in crop injury and yield loss. To maximize yield potential, make applications early to eliminate competing weeds.

**Single Application - Apply 16 to 24 fluid ounces per acre no later than the 6-leaf stage for the control of annual weeds. Avoid overlapping applications that may result in temporary yellowing, delayed flowering, and/or growth reduction.** Similar crop injury may result when applications of more than 16 fluid ounces per acre are applied after the 4-leaf stage.

**Sequential Application - Apply 16 fluid ounces per acre to 1 to 3-leaf canola followed by a sequential application at a minimum interval of 10 days, but no later than the 6-leaf stage. Sequential applications are specified for early emerging annual weeds and perennial weeds such as Canada thistle and quackgrass, or when multiple application times are needed for adequate weed control.**

**PRECAUTIONS, RESTRICTIONS:** No more than two in-crop broadcast applications may be made from crop emergence through the 6-leaf stage of development and the total in-crop application should not exceed 37 fluid ounces per acre. Allow a minimum of 60 days between last application and canola harvest.

**Roundup Ready Canola (Winter)**

Roundup Ready winter canola is defined as those Roundup Ready canola varieties that are seeded in early fall and harvested the following spring or summer. Winter canola varieties are intended to enter a cold period dormancy in the winter.

**Annual Maximum Application Rates**

- Preplant, Pre-Planting, Preemergence applications: 2 quarts per acre
- Total in-crop application from emergence to 5-leaf stage: 1 quart per acre

**DO NOT USE THIS PRODUCT ON WINTER CANOLA WITH THE ROUNDUP READY GENE PLANTED IN THE FOLLOWING STATES: ALABAMA, DELAWARE, FLORIDA, GEORGIA, KENTUCKY, MARYLAND, NEW JERSEY, NORTH CAROLINA, SOUTH CAROLINA, TENNESSEE, VIRGINIA AND WEST VIRGINIA. EXCEPT FOR USES IN WILDLIFE FOOD PLOTS THAT WILL NOT BE HARVESTED FOR HUMAN OR LIVESTOCK FOOD.**

**TYPES OF APPLICATIONS:** Preplant, Pre-Planting, Preemergence, Postemergence (In-crop).

**GENERAL USE INSTRUCTIONS:** See the "ROUNDUP READY CROPS" section of this label for general precautionary instructions for use of this product in Roundup Ready crops. See the "GENERAL INFORMATION" section of this label for more information on an "Annual Maximum Application Rate." Preplant, Pre-Planting, Preemergence.

**USE INSTRUCTIONS:** This product may be applied before, during or after planting, up to a maximum of 2 quarts per acre.

**Postemergence (In-crop)**

**USE INSTRUCTIONS:** This product may be applied to Roundup Ready winter canola varieties from emergence to canopy closure in the fall and prior to bolting in the spring. Applications made during or after bolting may result in crop injury and yield loss. To maximize yield potential, make applications early to eliminate competing weeds.

Some weeds with multiple germination times, or suppressed (stunted) weeds, or weeds that have overwintered may require sequential applications of this product for control. The second application should be made after some regrowth has occurred and at least 60 days after a previous application of this product.

**Single Application - Apply 24 to 32 fluid ounces of this product per acre in the fall. Applications in the fall should be made when weeds are small and actively growing. Use the higher rate in the specified range when weed densities are high, when weeds have overwintered or when weeds become large and well-established. Applications of greater than 16 fluid ounces per acre prior to the 6-leaf stage may result in reduced crop growth in the fall. Avoid spray overlap. Spray overlaps may result in temporary yellowing and/or growth reduction.**

**Sequential Applications - Apply 16 to 24 fluid ounces of this product per acre to 2-leaf or larger canola in the fall, followed by a sequential application at the same rate and at a minimum interval of 60 days, but before bolting in the spring. Sequential applications are specified for early emerging annual weeds and winter emerging weeds such as downy brome, jointed grass and ryegrass, and for weeds that have overwintered. This product will control or suppress most perennial weeds. For some perennial weeds, sequential applications may be required to reduce competition with the crop.**

**PRECAUTIONS, RESTRICTIONS:** No more than two over-the-top broadcast applications may be made from crop emergence up to the onset of bolting, and the total in-crop application must not exceed 64 fluid ounces of this product per acre. Applications of greater than 24 fluid ounces per acre prior to the 6-leaf stage may result in reduced crop growth in the fall. Allow a minimum of 60 days between last application and harvest of canola grain. No waiting period is required between application and open grazing of livestock.

**Roundup Ready Corn 2**

**TYPES OF APPLICATIONS:** Preplant, Pre-Planting, Preemergence, Postemergence (In-crop), Spot Treatment, Preharvest, Postharvest.

*(For use with Preemergence, Postemergence, or Preharvest)*

1. **Preplant, Pre-emergence, Pre-emergence**
   - Use INSTRUCTIONS: This product may be applied alone or in a tank mixture before, during, or after planting.

2. **Tank Mixtures:** This product may be tank mixed with the products listed below. Ensure that the specific product used is labeled for that application. Read and follow label directions for all products in the tank mixture. Apply these tank mixtures in 10 to 20 gallons of water or 10 to 20 gallons of nitrogen solution per acre.

   **NOTE:** For maximum weed control, a postemergence (in-crop) application of this product should be applied following the use of less than labeled rates of the preemergence residual products listed above.

3. **Postemergence (in-crop)**
   - Use INSTRUCTIONS: This product may be applied alone or in tank mixtures postemergence (in-crop) to corn hybrids designated as Rondrup Ready Corn. When applied as directed, this product controls annual grass and broadleaf weeds listed on this label. Many perennial grasses and broadleaf weeds will be controlled or suppressed with one or more applications of this product. A postemergence application of this product should be made before the weeds reach a height of 4 inches or before they become competitive with the corn. If new flushes of weeds occur, a sequential application of this product at 24 to 32 fluid ounces per acre should be made before the weeds reach a height of 4 inches.

   **This product may be broadcast over-the-top or applied with crop nozzles to Rondrup Ready Corn 2 from emergence through the V5 stage (5 leaves with collars) or until corn height reaches 30 inches (30 feet standing), whichever comes first. Crop nozzles are specified for optimum spray coverage and weed control when corn height is 24 to 30 inches. For corn heights 30 to 48 inches (free standing), apply this product only by ground application using drop nozzles aligned to avoid spraying into the whorls of the corn plants.**

4. **Tank Mixtures:** This product may be tank mixed with the following products. Ensure that the specific product being used in the tank mixture is registered for application postemergence (in-crop) to corn. Read and follow label directions for all products in the tank mixture:

   - Barvel, Basics, Basis Gold, Bullet, Calisto, Clarity, Degree, Dextra Xtra, Distinct, Equipo, Hannes, Hannes Xtra, Hannes Xtra 5.5L, Hornet, Marksman, Micro-Tech, Option, Resolute, Resource, YUKON

5. **Maximum Preapplication Rates:**
   - **Preplant, Pre-planting, Preemergence applications:** 8 quarts per acre
   - **Total in-crop applications from ground cracking to tasseling:** 8 quarts per acre
   - **Maximum preapplication rate:** 8 quarts per acre
   - **Combined total in-crop application from emergence through harvest:** 6 quarts per acre

*Bullet and Micro-Tech are not registered for use as a postemergence application in Texas.*

The addition of 1 to 2 percent dry ammonium sulfate by weight or 8:5 to 10:5 pounds per 100 gallons of water may increase the performance of this product under hard water conditions, drought conditions, or when tank mixed with Bul-let® or Micro-Tech® herbicides.

**PRECAUTIONS, RESTRICTIONS:** Single in-crop applications of this product should not exceed 3 pounds per acre. Sequential in-crop applications of this product from emergence through 48 inches in height must not exceed a total of 3 pounds per acre per growing season. Allow a minimum of 10 days between in-crop applications of this product. Allow a minimum of 50 days between application of this product in-crop and harvest of corn forage or grain. (For applications at preharvest time, see Preharvest section of this label.) The use of additional surfactants and other adjuvants, including fertilizers and micro-nutrients, in the spray solution are not specified for this product and may result in increased potential for crop injury or reduced yield, and are not specified for over-the-top applications, unless otherwise directed in supplemental labeling.

**Preharvest**

**USE INSTRUCTIONS:** A single preharvest application of up to 32 fluid ounces per acre of this product may be applied for annual and perennial weed control prior to crop harvest. Make application at 30 percent grain moisture or less. Ensure that maximum kernel fill is complete and the corn is physiologically mature (black layer formed).

**PRECAUTIONS, RESTRICTIONS:** Do not make a preharvest application of this product if more than a combined total of 64 fluid ounces of this product has been previously applied in over-the-top or droop nozzle applications. Allow a minimum of 7 days between a preharvest application and harvest or feeding of corn stover or grain.

**Postharvest**

**USE INSTRUCTIONS:** This product may be applied for weed control after crop harvest. Higher rates may be required for control of large weeds that were growing in the crop at the time of harvest. Tank mixtures with 2,4-D or dicamba may be used.

**PRECAUTIONS, RESTRICTIONS:** Allow a minimum of 3 days between application and feeding of treated vegetation.

**Rondrup Ready Cotton**

**TYPES OF APPLICATIONS:** Preplant, Preemergence, Al-Planting, Postemergence (in-crop), Selective Equipment (in-Crop), Preharvest.

**Annual Maximum Application Rates**

- **Preplant, Al-Planting, Preemergence applications:** 8 quarts per acre
- **Total in-crop applications from ground cracking to tasseling:** 8 quarts per acre
- **Maximum preapplication rate:** 8 quarts per acre
- **Combined total in-crop application from emergence through harvest:** 6 quarts per acre
GENERAL PRECAUTIONS, RESTRICTIONS: See the "ROUNDUP READY CROPS" section of this label for general precautionary instructions for use of this product in Roundup Ready crops. See the "GENERAL INFORMATION" section of this label for more information on "Annual Maximum Application Rates." ALLOW A MINIMUM OF 7 DAYS BETWEEN APPLICATION AND HARVEST.

Preplant, Pre-Planting, Preemergence

USE INSTRUCTIONS: This product may be applied before, during, or after planting. Tank mixtures with other herbicides listed in this label may be used.

TANK MIXTURES: This product may be tank-mixed with 2,4-D and Clarity and applied prior to planting only. This product may be tank-mixed with the following products and applied prior to crop emergence. Ensure that the specific product being used in the tank mixture is registered for application prior to the emergence of cotton. Read and follow label directions of all products in the tank mixture.

Capsam, Cotran, Direx, Dual MAGNUM, Prowl, Prowl HD, Stulhart, Staple

PRECAUTIONS, RESTRICTIONS: The maximum quantity of this product that may be applied for all preplant, pre-planting and preemergence applications combined is 5 quarts per acre per season.

Postemergence (In-crop)

USE INSTRUCTIONS: This product may be applied over the top of Roundup Ready cotton at rates up to 1 quart per acre per application from the ground cracking stage until the 4-leaf (node) stage of development (until the fifth true leaf reaches the size of a quarter). Applications made after the 4-leaf (node) stage of development may result in boll loss, delayed maturity and/or yield loss.

TANK MIXTURES: This product may be tank-mixed with the following products and applied over the top of Roundup Ready cotton. Ensure that the specific product being used in the tank mixture is registered for application postemergence (in-crop) to cotton. Read and follow label directions of all products in the tank mixture.

Assassin II, Dual MAGNUM, Fusilade, Poast Plus, Select, Stulhart, Staple, Staple Plus may cause leaf yellowing and/or leaf crinkling when applied postemergence (in-crop).

Dual Magmon and sheep applied over the top of Roundup Ready cotton may cause leaf injury in the form of necrotic spotting to exposed cotton leaves.

PRECAUTIONS, RESTRICTIONS: The maximum quantity of this product that may be applied for all in-crop applications from ground-cracking to boll-open combined is 4 quarts per acre per season. No more than two over-the-top broadcast applications may be made from crop emergence through the 4-leaf (node) stage of development. No more than two applications should be made from the 4-leaf stage through boll-open. Sequential over-the-top or pre-directed applications of this product in-crop must be at least 10 days apart and cotton must have at least two nodes of incremental growth between applications. Do not add additional surfactant or additives containing surfactant to this product (other than those contained in any tank-mix product) for over-the-top applications to Roundup Ready cotton.

Salvage Treatment: This treatment may be used after the 4-leaf stage of development and should only be used where weeds that cause the loss of the crop. One quart per acre may be applied either as an over-the-top application or as a post-directed treatment sprayed higher on the cotton plants and over the weeds. NOTE: SALVAGE TREATMENTS WILL RESULT IN SIGNIFICANT BOLL LOSS, DELAYED MATURITY AND/or YIELD LOSS. NO MORE THAN ONE SALVAGE TREATMENT SHOULD BE USED PER GROWING SEASON.

Selective Equipment (In-crop)

USE INSTRUCTIONS: This product may be applied using precision post-directed or hooded sprayers at rates up to 1 quart per acre per application to Roundup Ready cotton through boll-open. At this stage, use post-directed equipment to direct the spray to the base of the cotton plants. Avoid contact of the herbicide spray with the cotton leaves to the maximum extent possible. To minimize spray contact, maintain low spray pressure (less than 30 pounds per square inch) and place nozzles in a low position, directing a horizontal spray pattern under the cotton leaves and onto weeds in the row. For best results, make applications while weeds are small (less than 3 inches). See additional instructions on the use of selective equipment in the "APPLICATION EQUIPMENT AND TECHNOLOGIES" section of this label.

TANK MIXTURES: This product can be tank-mixed with the following products for in-crop application using precision post-directed or hooded sprayers. Ensure that the specific product being used in the tank mixture is registered for application postemergence (in-crop) to cotton. Read and follow label directions of all products in the tank mixture.

Air, Capsam, Chateau, Cotran, Direx, Layby-Pro, Prowl HD, Staple, Value Staple may cause leaf yellowing and/or leaf crinkling when applied postemergence (in-crop).

PRECAUTIONS, RESTRICTIONS: The maximum quantity of this product that may be applied for all in-crop applications from ground-cracking to boll-open combined is 4 quarts per acre per season. Sequential over-the-top or post-directed applications of this product in-crop must be at least 10 days apart and cotton must have at least two nodes of incremental growth between applications. Preharvest

USE INSTRUCTIONS: This product may be applied for annual and perennial weed control as a broadcast treatment prior to crop harvest after 20 percent boll crack. Apply up to 2 quarts of this product per acre. NOTE: This product will not enhance the performance of harvest aids when applied to Roundup Ready cotton.

PRECAUTIONS, RESTRICTIONS: Allow a minimum of 7 days between application and harvest of cotton. Preharvest application is not specified for cotton grown for seed, as a reduction in germination or vigor may occur.

ATTENTION: Use of this product in accordance with label directions is expected to result in normal growth of Roundup Ready Cotton, however, due to the sensitivity of cotton planting to various environmental conditions, agronomic practices and other factors, it is impossible to eliminate all risks associated with this product, even when applications are made in conformance with the label specifications. In some cases, these factors can result in boll loss, delayed maturity and/or yield loss.

Roundup Ready Flex Cotton

The use of the over-the-top applications described in this section on other than Roundup Ready Flex cotton will cause crop injury and reduced yields. Drift of this product from applications made to Roundup Ready Flex cotton onto adjacent fields at post 4-leaf (node) Roundup Ready cotton may cause extensive injury including boll loss, delayed maturity and/or yield loss.

Note: The instructions provided in this section are specific to, and should only be used with, varieties designated as Roundup Ready Flex cotton. Do not combine the instructions in this section, with those in the "Roundup Ready Cotton" section of this label, or with any other Roundup Ready cotton or Roundup Ready Flex cotton instructions on labeling for this or other glyphosate-containing product.

TYPES OF APPLICATIONS: Preplant, Pre-Planting, Preemergence, Postemergence (In-crop), Preharvest.
Annual Maximum Allowable Application Rates

- Combined total per year for all applications: 8 quarts per acre
- Preplant, At-Planting, Preemergence applications: 5 quarts per acre
- Total in-crop applications from ground cracking to 60 percent bolt: 6 quarts per acre
- Straw and allowed from 60 percent bolts open to 7 days prior to harvest: 2 quarts per acre
- Combined total in-crop application from emergence through harvest: 6 quarts per acre

GENERAL PRECAUTIONS, RESTRICTIONS: See the "ROUNDUP READY CROPS" section of this label for general precautionary instructions for use in Roundup Ready crops. See the "GENERAL INFORMATION" section of this label for more information on "Annual Maximum Application Rates." Refer to individual tank mixture product label for restrictions and precautions, use according to the most restrictive precautionary statements for each product in the tank mixture.

Preplant, At-Planting, Preemergence

USE INSTRUCTIONS: This product may be applied before, during or after planting. TANK MIXTURES: This product may be tank-mixed with 2,4-D or Clarity and applied prior to planting only. This product may be tank-mixed with the following products and applied prior to crop emergence. Ensure that the specific product being used in the tank mixture is registered for application prior to emergence of cotton. Read and follow label directions of all products in the tank mixture.

Cepacil, Coloran, Directed, Dual Magnum, Prowl, Prowl H2O, Stalwart, Stalpro

Postemergence (in-crop)

USE INSTRUCTIONS: This product may be applied to control annual grasses and broadleaf weeds listed on this label in Roundup Ready Flex cotton. To maximize yield potential, spray cotton early to eliminate competing weeds. Many perennial weeds will be controlled or suppressed with one or more applications of this product. In general, an initial application of 1 quart per acre on 1 to 3 inch tall annual grass and broadleaf weeds is specified. This product may be applied preplant at rates up to 1.5 quarts per acre per application. In addition to broadcast applications, post-directed spray equipment may be used to achieve weed coverage.

TANK MIXTURES: This product may be tank-mixed with the following products and applied to postemergence (in-crop) over the top of Roundup Ready Flex cotton. To ensure that the specific product being used in the tank mixture is registered for application postemergence (in-crop) to cotton, read and follow label directions of all products in the tank mixture.

Assure II, Dual Magnum, Empros, Flexsede, Poast Plus, Select, Stalwart, Staple

Staple may cause leaf yellowing and/or leaf crinkling when applied postemergence (in-crop).

Dual Magnum and Stalwart applied over the top of Roundup Ready cotton may cause leaf injury in the form of necrotic spotting to excess cotton leaves.

PRECAUTIONS, RESTRICTIONS: The maximum rate for any single in-crop application of this product is 1.5 quarts per acre made using ground application equipment. In-crop application rates above 1 quart per acre made alone or with the addition of other crop chemical products containing surfactant may cause crop response including leaf spotting or leaf necrosis. Do not exceed a maximum rate of 1 quart per acre of this product when making applications by air. Between 80% and 60% open bolls, the maximum combined total rate of this product that may be applied is 2 quarts per acre. The maximum combined total of all applications made from crop emergence to 60 percent open bolls must not exceed 6 quarts per acre. Do not add additional surfactant or additives containing surfactant to this product for over-the-top applications to Roundup Ready Flex cotton.

Preharvest

USE INSTRUCTIONS: Up to 2 quarts of this product may be applied for annual and perennial weed control as a broadcast treatment prior to harvest after 60 percent boil crack. NOTE: This product will not enhance the performance of harvest aids when applied to Roundup Ready Flex cotton.

PRECAUTIONS, RESTRICTIONS: Allow a minimum of 7 days between application and harvest. Preharvest application is not specified for cotton grown for seed, as a reduction in germination or vigor may occur.

ATTENTION: Use of this product in accordance with label directions is expected to result in normal growth of Roundup Ready Flex Cotton. However, due to the sensitivity of cotton fruiting to various environmental conditions, agronomic practices and other factors it is impossible to eliminate all risks associated with this product, even when applications are made in accordance with the label specifications. In some cases, these factors can result in yield loss, delayed maturity and/or yield loss.

ROUNDUP READY SOYBEANS

TYPES OF APPLICATIONS: Preplant, Preemergence, At-Planting, Postemergence (in-crop), Preharvest, Post-Harvest.

Annual Maximum Application Rates

- Combined total per year for all applications: 8 quarts per acre
- GENERAL PRECAUTIONS, RESTRICTIONS: See the "ROUNDUP READY CROPS" section of this label for general precautionary instructions for use in Roundup Ready crops. See the "GENERAL INFORMATION" section of this label for more information on "Annual Maximum Application Rates." Refer to individual tank mixture product label for restrictions and precautions, use according to the most restrictive precautionary statements for each product in the tank mixture.

Preplant, At-Planting, Preemergence

USE INSTRUCTIONS: This product may be applied before, during or after planting. TANK MIXTURES: This product may be tank-mixed with 2,4-D or Clarity and applied prior to planting only. This product may be tank-mixed with the following products and applied prior to crop emergence. Ensure that the specific product being used in the tank mixture is registered for application prior to emergence of soybeans. Read and follow label directions of all products in the tank mixture.

Postemergence (in-crop)

USE INSTRUCTIONS: This product may be used to control annual grasses and broadleaf weeds listed on this label in Roundup Ready soybeans. Applications of this product can be made from emergence (cracking) through flowering (R2 stage soybeans). R2 stage soybeans ends when a pod reaches 5 millimeters (0.2 inches) in length at one of the four uppermost nodes on the main stem with a fully developed leaf. Refer to the "WEEDS RATE SECTION" in this label for rates recommendations for specific annual weeds. In general, an initial application of 1 quart per acre on 2 to 8 inch tall weeds is specified. Weeds will generally be 2 to 6 inches tall, 2 to 5 weeks after planting. If the
Maximum Annual Application Rates
Combined total per year for all applications: 8 quarts per acre
Preplant, At-planting, Preemergence applications: 5 quarts per acre
Emergence to 6-leaf stage: 2.5 quarts per acre
Between 6-leaf stage and canopy closure: 2 quarts per acre

GENERAL PRECAUTIONS, RESTRICTIONS: See the "ROUNDUP READY CROPS" section of this label for general precautionary instructions and for use in Roundup Ready crops. See the "GENERAL INFORMATION" section of this label for more information on "Annual Maximum Application Rates." Refer to individual tank mixture product label for restrictions and precautions, use according to the most restrictive precautionary statements for each product in the tank mixture.

Preplant, At-Planting, Preemergence
USE INSTRUCTIONS: This product may be applied before, during, or after planting. Tank Mixtures: This product may be tank-mixed with the following products and applied prior to crop emergence. Ensure that the specific product being used in the tank mixture is registered for application postemergence (in-crop) to soybeans. Read and follow label directions of all products in the tank mixture.
Active ingredient(s) or brand name of product(s) containing the following active ingredients that are registered for use postemergence (in-crop) to soybean: acifluorfen, chlorsulfuron, bentazon, chlorimuron-ethyl, imazapic, imazaquin, imazethapyr, nitenpyram, fluazifop-p-butyl, fluroxypyr, paraquat, monolinuron, glufosinate, imazaquin, lacturon, pendimethalin, quizalofop-p-ethyl, sultomet-selufen, metribuzin, sulfometuron-methyl.

Preemergence (in-crop)
USE INSTRUCTIONS: This product may be applied over-the-top of Roundup Ready sugar beets for control of annual grasses and broadleaf weeds from emergence to 20 days prior to harvest. To maximize yield potential, apply sugar beets early to eliminate competing weeds. Up to 4 sequential applications of this product may be made with at least 10 days between applications. Refer to the "ANNUAL WEEDS RATE SECTION" in this label for rate recommendations for specific annual weeds. This product will control or suppress most perennial weeds. For some perennial weeds, repeat applications may be required to eliminate crop competition throughout the growing season.
Tank Mixtures: This product may be tank-mixed with the following products and applied postemergence (in-crop) over the top of Roundup Ready sugar beet. Ensure that the specific product being used in the tank mixture is registered for application postemergence (in-crop) to sugar beet. Read and follow label directions of all products in the tank mixture.
Active ingredient(s) or brand name of product(s) containing the following active ingredients that are registered for use postemergence (in-crop) to sugar beet: dithiopyr, clopyralid, desmetryn, aminomethylphenoxyacetic acid, penteclorpyr, monolinuron, mesotrione, fenuron, glufosinate, imazapic, sulfonylurea.

Postharvest
USE INSTRUCTIONS: This product may be applied after harvest of Roundup Ready soybeans. Higher rates may be required for control of large weeds that were growing in the crop at the time of harvest. Tank mixtures with 2,4-D or dicamba may be used.

Roundup Ready Sugar Beet
TYPES OF APPLICATIONS: Preplant, At-Planting, Preemergence (in-crop).

NON-CROP USES AROUND THE FARMSTAND
TYPES OF APPLICATIONS: General Weed Control, Trim-and-Edge, Greenhouse/Shadehouse, Chemical Mowing, Out Blump, Habitat Management.
General Weed Control, Trim-And-Edge

USE INSTRUCTIONS: This product may be used to control annual weeds, perennial weeds and woody brush and found in any part of the farmstead, including around building foundations and equipment storage areas, along and in fences, in dry ditches and canals, along ditches, banks, farm roads, right-of-way, ditches, and prior to planting landscape ornamentals. Refer to the "ANNUAL WEEDS" and "PERENNIAL WEEDS" and "WOODY BRUSH AND TREES RATE SECTIONS" in this label for treatment rates. For application through backpack sprayers, handguns or other high-volume spray-to-wet applications, see the "Annual Weeds -- Hand-Held or Backpack Equipment" section of this label for further instructions.

TANK MIXTURES: This product may be tank mixed with the following products, provided that the specific product used is registered for treatment at these non-crop sites. Refer to the individual product labels for approved farmstead sites and application rates. For more information, see the "TANK MIXTURES" and "TANK MIXING PROCEDURES" sections of this label.

Arsenal
Barrier 60G
Copperslue L
Diluron
Dicamba
Enduranza
Escort
Glozol
Karmex DF
Kover 1 DF

This product plus dicamba tank mixtures may not be applied by air in California.

Greenhouse/Shadehouse

USE INSTRUCTIONS: This product may be used to control weeds in and around greenhouses and shade houses.

PRECAUTIONS, RESTRICTIONS: Desirable vegetation must not be present during application. Air circulation fans must be turned off. Do not use in residential greenhouses.

Chemical Mowing

USE INSTRUCTIONS: This product will suppress perennial grasses listed in this section to serve as a substitute for mowing. Use 6 fluid ounces of this product per acre when treating Kentucky bluegrass. Use 8 fluid ounces of this product per acre when treating tall fescue, fine fescue, orchardgrass, bahiagrass or buffalograss covers. Use 16 fluid ounces of this product per acre when treating Bermudagrass. Use 64 fluid ounces of this product per acre when treating clover or pasture. Apply treatments in 10 to 20 gallons of spray solution per acre. Chemical mowing applications may be made along farm ditches and other parts of farmsteads.

PRECAUTIONS, RESTRICTIONS: Use only in areas where some temporary injury or discoloration of perennial grasses can be tolerated.

Cut Stump

TYPES OF APPLICATIONS: Treating cut stumps in any non-crop site listed on this label.

USE INSTRUCTIONS: This product will control regrowth of cut stumps and re-sprouts of many types of woody brush and tree species, some of which are listed below. Apply this product using suitable equipment to ensure coverage of the entire circumference. Cut trees or re-sprouts close to the soil surface. Apply a 50 to 100 percent solution of this product to the freshly cut surface immediately after cutting. Do not apply to meats in application may result in reduced performance. For best results, applications should be made during periods of active growth and full leaf expansion.

Alston
Eclipta
Manifera
Oak

This product plus dicamba tank mixtures may not be applied by air in California.

Habitat Management

TYPES OF APPLICATIONS: Habitat Restoration and Maintenance, Wildlife Food Plots.

Habitat Restoration and Maintenance

USE INSTRUCTIONS: This product may be used to control exotic and other undesirable vegetation in habitat management areas. Applications can be made to allow recovery of native plant species, prior to planting desirable native species, and to control broad-spectrum vegetation control requirements in habitat management areas. Spot treatments can be made to selectively remove unwanted plants for habitat maintenance and enhancement.

Wildlife Food Plots

USE INSTRUCTIONS: This product may be used as a site preparation treatment to control annual and perennial weeds prior to planting wildlife food plots. Any wildlife food species, including Roundup Ready canola, may be planted after applying this product, or native species may be allowed to re-establish the area. If tillage is needed to prepare a seeded, wait 7 days after application before tilling. For specific product instructions for Roundup Ready canola wildlife food plots, see the "ROUNDUP READY CANOLA" section of this label.

PRECAUTIONS, RESTRICTIONS: Do not process treated Roundup Ready canola seeds from Roundup Ready canola wildlife food plots for food. Do not graze or feed treated Roundup Ready canola from wildlife food plots to livestock. There are no rotational restrictions for planting any wildlife food species or for allowing native species to re-establish the area following applications of this product.

ANNUAL WEEDS RATE SECTION

When water carrier volumes are between 16 and 40 gallons per acre for ground applications and between 6 and 15 gallons per acre for aerial applications, the following use rates will control the annual weeds listed in the table below:

- 1 quart per acre - grass and broadleaf annual weeds less than 6 inches in height or circumference and vines less than 3 inches in length.
- 3 pints per acre - grass and broadleaf annual weeds 6 to 12 inches in height or circumference and vines 3 to 6 inches in length.
- 4 quarts per acre - grass and broadleaf annual weeds greater than 12 inches in height or circumference and vines greater than 6 inches in length.

WHEN WATER CARRIER VOLUMES ARE BETWEEN 3 AND 15 GALLONS PER ACRE FOR GROUND APPLICATIONS AND BETWEEN 3 AND 8 GALLONS PER ACRE FOR AERIAL APPLICATIONS, USE THE RATES SPECIFIED FOR INDIVIDUAL WEEDS AS LISTED IN THE "ANNUAL WEEDS RATE TABLE" (Alphabetically by Species).
Apply to actively growing annual weeds. Annual weeds are generally easiest to control when they are small.

Older, mature (hardened) annual weed species may require higher rates even if they meet the size requirements.

Maximum size refers to the maximum plant height, length of runners for vines, or circumference of rossette plants in inches.

Do not tank mix with soil residual herbicides when using these rates unless otherwise specified.

For weeds that have been mowed, grazed or cut, allow regrowth to occur prior to treatment.

This product may be used up to 64 fluid ounces per acre where heavy weed densities exist.

## Annual Weeds - Hand-Held or Backpack Equipment

For control of weeds listed in the "Annual Weeds Rate Table" above, apply a 0.5-1.0% solution of this product to weeds less than 6 inches in height or larger than 12 inches in height. Apply prior to emergence formation or bud formation in broadleaf weeds. For annual weeds over 6 inches tall, or unless otherwise specified, use a 0.1% solution.

For best results, use a 0.2% solution on hard-to-control perennial weeds, such as Bermudagrass, dock, field bindweed, hemp dogbane, milkweed and Canada thistle. When using application methods that result in less than complete coverage, use a 0.5% solution for annual and perennial weeds and a 2-10% solution for woody brush and trees.

## Annual Weeds - Tank Mixtures with Atrazine for Fallow and Reduced Tillage Systems

For use only in Colorado, Kansas, Nebraska, Oklahoma, Oregon, South Dakota, and Washington, if Oregon and Washington, do not exceed 1 pound of atrazine per acre.

Applications of 24 to 36 fluid ounces of this product plus 1 to 2 pounds of atrazine per acre will control the following weeds: Stitchwort (requiring 28 ounces for control), Dowry brome, Green foxtail, Lambsquarters, Pigweed, Russian thistle, Volunteer wheat, Wild grass, and Kochia (add 0.12 pound of dicamba for control).

Ensure that the specific product is registered for application at the desired site. Follow all precautions and limitations on the tank mix product’s label, including application timing restrictions, soil restrictions, minimum re-cropping intervals, and rotational guidelines. Some crop injury may occur if dicamba or Tordon 22K is applied within 45 days of planting.

**DO NOT APPLY DICAMBA TANK MIXTURES BY AIR IN CALIFORNIA.**

*For control of downy brome in no-till systems, use 24 fluid ounces per acre.

**Performance is better if application is made before this weed reaches the boot stage of growth.

Use 24 fluid ounces per acre of this product to control wild buckwheat in the coyledon to 2-leaf stage. Use 24 fluid ounces per acre to control 2- to 4-leaf wild buckwheat. For improved control of wild buckwheat over 2 inches in size, use sequential treatments of 24 fluid ounces followed by 24 fluid ounces of this product per acre.

Do not treat leek in the button stage.

Control of Russian thistle may vary based on environmental conditions and spray coverage. Whenever possible, a tank mixture with 2.4-0.5% as described below may improve control.

A glyphosate-resistant thistle has been confirmed. For additional information, refer to the "Weed Resistance Management" section of this label. You may also visit www.weedscience.org or www.weedresistancemanagement.com for more information.

### Annual Weeds - Tank Mixtures with 2.4-0.5 or Dicamba or Tordon 22K

Better control of certain tough weeds can be achieved by tank mixing this product with 0.25 pound of dicamba, 0.5 pound of 2.4-0.5 or 1 to 2 fluid ounces of Tordon 22K per acre. These other herbicides, combined with the rates of this product specified in the "Annual Weeds Rate Table" above, will control the following weeds up to the maximum height or length indicated: 6" - prickly lettuce, Monterey brome, morning glory, kochia (dicamba only) wild buckwheat (Tordon 22K only); 12" - cocklebur, lambquarters, pigweed, Russian thistle (2.4-0.5 only).

For better control of common ragweed, giant ragweed, Pennsylvania smartweed, or velvetleaf with a maximum height of 6 inches, tank mix this product with 0.5 pound of 2.4-0.5 per acre.

Ensure that the specific product is registered for application at the desired site. Follow all precautions and limitations on the tank mix product’s label, including application timing restrictions, soil restrictions, minimum re-cropping intervals, and rotational guidelines. Some crop injury may occur if dicamba or Tordon 22K is applied within 45 days of planting.

**DO NOT APPLY DICAMBA TANK MIXTURES BY AIR IN CALIFORNIA.**

### Annual Weeds - Tank Mixtures with Atrazine for Fallow and Reduced Tillage Systems

For use only in Colorado, Kansas, Nebraska, Oklahoma, Oregon, South Dakota, and Washington, if Oregon and Washington, do not exceed 1 pound of atrazine per acre.

Applications of 24 to 36 fluid ounces of this product plus 1 to 2 pounds of atrazine per acre will control the following weeds: Stitchwort (requiring 28 ounces for control), Dowry brome, Green foxtail, Lambsquarters, Pigweed, Russian thistle, Volunteer wheat, Wild grass, and Kochia (add 0.12 pound of dicamba for control).

Ensure that the specific product is registered for application at the desired site. Follow all precautions and limitations on the tank mix product’s label, including application timing restrictions, soil restrictions, minimum re-cropping intervals, and rotational guidelines.
## PERENNIAL WEEDS RATE TABLE (Alphabetically by Species)

<tr>
<td>Bahiagrass</td>
<td>3-5</td>
<td>3-20</td>
<td>2%</td>
<td>For suppression in grass seed production areas. For ground applications only. Ensure entire crop area has resumed growth prior to a fall application. Bahiagrass should have at least 3 inches of growth. Tillage prior to treatment should be avoided. Tillage 7 to 10 days after application is specified for best results.</td>
</tr>
<tr>
<td>Bentgrass</td>
<td>3-5</td>
<td>10-20</td>
<td>2%</td>
<td>For control, apply 5 quarts of this product per acre. For partial control, apply 3 quarts per acre. Treat when Bentgrass is actively growing and seedheads are present. Retreatment may be necessary to achieve control.</td>
</tr>
<tr>
<td>Bermudagrass</td>
<td>3-5</td>
<td>3-20</td>
<td>2%</td>
<td>Apply 3 quarts of this product in 6 to 10 gallons of water per acre. Apply when water Bermudagrass is 6 to 12 inches in length. Allow 7 to 10 days after applications from fall applications. Apply prior to frost on water Bermudagrass that is 12 to 18 inches in length.</td>
</tr>
<tr>
<td>Bermudagrass, water</td>
<td>1-1.5</td>
<td>5-10</td>
<td>2%</td>
<td>This product is not registered in California for use on water tolerant grasses.</td>
</tr>
<tr>
<td>Birdwood, field</td>
<td>0.5-5</td>
<td>3-20</td>
<td>2%</td>
<td>Do not treat when weeds are under drought stress as good soil moisture is necessary for active growth. For control, apply 4 to 5 quarts of this product per acre west of the Mississippi River and 3 to 4 quarts per acre east of the Mississippi River. Apply when the weeds are at or beyond full bloom. For best results, apply in late summer or fall. Fall treatments must be applied before a killing frost. Apply 2 quarts of this product plus 0.5 pound of dicamba in 10 to 20 gallons of water per acre. Do not apply by air. For suppression on irrigated agricultural land, apply 1 to 2 quarts of this product plus 1 pound of 2,4-D in 10 to 20 gallons of water per acre with ground equipment only. Applications should be made following harvest or in fall fallow ground when the birdwood is actively growing and the majority of runners are 12 inches or more in length. Irrigate at least once to promote active birdwood growth. For suppression, apply 1 pint of this product plus 0.5 pound of 2,4-D, in 3 to 10 gallons of water per acre for ground applications, and 3 to 5 gallons of water per acre for aerial applications. Apply by air or by low-dose and reduced tillage systems only. Applications should be delayed until maximum emergence has occurred and when vines are between 6 to 18 inches in length. In California only apply the 5 quarts of this product per acre. Actual rate needed for suppression or control will vary within this range depending on local conditions. For suppression on irrigated land where annual tillage is performed, apply 1 quart of this product in 3 to 10 gallons of water per acre. Apply to birdwood that has reached a length of 12 inches or greater. Allow maximum weed emergence and runner growth. Allow 3 or more days after application before tillage.</td>
</tr>
<tr>
<td>Bluegrass, Kentucky</td>
<td>1-2</td>
<td>3-40</td>
<td>2%</td>
<td>Apply 2 quarts of this product in 10 to 40 gallons of water per acre when most plants have reached boot-to-early seedhead stages of development. For partial control in pasture or hay crop renovation, apply 1 to 1.5 quarts of this product in 3 to 10 gallons of water per acre. Apply to actively growing plants when most have reached 4 to 12 inches in height.</td>
</tr>

1. **Apply when most plants have reached the early bud stage of growth.**
2. **Apply when most plants have reached the early heading stage of growth.**

**WOODY BRUSH AND TREES RATE SECTION**

Apply this product after full leaf expansion, unless otherwise directed. Use the higher rate for larger plants and/or dense areas of growth. On vines, use the higher rate for plants that have reached the woody stage of growth. Best results are obtained when application is made in late summer or fall after fruit formation.

In and areas, best results are obtained when applications are made in the spring to early summer when brush species are at high moisture content and are flowering. Unless otherwise directed, apply broadcast treatments in 3 to 40 gallons of water per acre. Ensure thorough coverage when using hand-held equipment. Symptoms may not appear prior to frost or senescence with fall treatments. Allow 7 or more days after application before tillage, mowing or removal. Repeat treatments may be necessary to control plants regenerating from underground parts or seed. Some autumn colors on undisturbed deciduous species are acceptable provided no major leaf loss has occurred. Reduced performance may result if fall treatments are made following a frost.

<sup>1</sup> Partial Control  
<sup>2</sup> Thorough coverage of foliage is necessary for best results.  
<sup>3</sup> Unless otherwise specified, applications may be made to control any weeds listed in the "WEEDS CONTROL LIST" section of this label. Refer to the "APPLICATION EQUIPMENT AND TECHNIQUES" section for detailed instructions on different application methods.  
<sup>4</sup> General Non-crop Areas, Industrial Sites  
Use in areas such as airports, apartment complexes, commercial sites, Conservation Reserve Program (CRP) areas, ditch banks, driveways, dry ditches, dry canals, fencrows, golf courses, greenhouses, industrial sites, landscape areas, lumber yards, manufacturing sites, municipal sites, natural areas, office complexes, ornamentals, parks, parking areas, pastures, petroleum tank farms andumping installations, plant nurseries, public areas, roadsides, rangeland, rights-of-way, roadsides, shadehouses, and in turf seed farms, storage areas, sports complexes, substations, turfgrass areas, utility sites, warehouse areas, and wildlife management areas.  
<sup>5</sup> General Weed Control, Trim-and-Edge, Bare Ground  
This product may be used in general non-crop areas. It may be applied with any application equipment described in this label. This product may be used to trim-and-edge around objects in non-crop sites, for spot treatment of unwanted vegetation and to eliminate unwanted weeds growing in established shrub beds or ornamental plantings. This product may be used prior to planting an area to ornamentals, flowers, turfgrass (cool or warm), or prior to laying asphalt or beginning construction projects.  
<sup>6</sup> Repeated applications of this product may be used, as weeds emerge, to maintain bare ground.  

**TANK MIXTURES:** This product may be tank-mixed with the following products, provided that the specific product is registered for use on such non-crop sites. Refer to these products' labels for approved non-crop sites and application rates.
Active Growing Bermudagrass
This product may be used to control or partially control many annual and perennial weeds for effective release of actively growing Bermudagrass. DO NOT apply more than 16 fluid ounces of this product per acre in highly maintained turfgrass areas. DO NOT apply tank mixtures of this product plus Oust or Oust XP in highly maintained turfgrass areas. For further areas, refer to the "ROADSIDES" section of this label, which gives rates for actively growing Bermudagrass treatments. Use only in areas where some temporary injury or discoloration can be tolerated.

Turfgrass Renovation, Seed, or Seed Production
This product controls most existing vegetation prior to renovating turfgrass areas or establishing turfgrass grass for seed or sod. For maximum control of existing vegetation, delay planting or sodding to determine if any regrowth from escaped underground plant parts occurs. Where repeat treatments are necessary, sufficient regrowth must be obtained prior to application. For warm-season grasses such as Bermudagrass, summer or fall applications provide the best control. Where existing vegetation is growing under mowed turfgrass management, apply this product after mowing at least one regular mowing to allow sufficient growth for good interception of the spray. Desirable turfgrasses may be planted following the above procedures.

Hand-held equipment may be used for spot treatment of unwanted vegetation growing in existing turfgrass. Broadcast or hand-held equipment may be used to control sod remnants or other unwanted vegetation after seed is harvested.

Do not feed or graze turfgrass grown for seed or sod production for 8 weeks following application.

Chemical Mowing - Perennials
This product will suppress perennial grasses listed in this section to serve as a substitute for mowing. Use 8 fluid ounces of this product per acre when treating tall fescue, fine fescue, orchardgrass, quackgrass or need canegrass covers. Use 6 fluid ounces of this product per acre when treating Kentucky bluegrass. Apply treatments in 10 to 40 gallons of spray solution per acre.

Use only in areas where some temporary injury or discoloration of perennial grasses can be tolerated.

Chemical Mowing - Annuals
For growth suppression of some annual grasses, such as annual ryegrass, wild barley and wild oats growing in coarse turf on roadsides or other industrial areas, apply 4 to 5 fluid ounces of this product in 10 to 40 gallons of spray solution per acre.

Applications should be made when annual grasses are actively growing and before the seedheads are in the boot stage of development. Treatments may cause injury to the desired grasses.

Chemical Mowing - Turfgrass
This product may be used to control or suppress many winter annual weeds and tall fescue for effective release of dormant Bermudagrass and bahiagrass turf. Treat only when turf is dormant and prior to spring greenup.

Apply 8 to 16 fluid ounces of this product per acre. Apply the specified rates in 10 to 40 gallons of water per acre. Use only in areas where Bermudagrass or bahiagrass are desirable ground cover and where some temporary injury or discoloration can be tolerated.

Treatments in excess of 16 fluid ounces per acre may result in injury or delayed greenup in highly maintained areas, such as golf courses and lawns. DO NOT apply tank mixtures of this product plus Oust in highly maintained turfgrass areas. For further uses, refer to the "ROADSIDES" section of this label, which gives rates for dormant Bermudagrass and bahiagrass treatments.
**Bermudagrass Release**

This product may be used in pastures to control or partially control many annual and perennial weeds for effective release of actively growing Bermudagrass. Apply 1 to 3 pints of this product in up to 80 gallons of spray solution per acre. Use the higher rates when treating annual weeds below 6 inches in height (or runner length). Use the higher rate as weeds increase in size or as they approach flower or seedhead formation. These rates will also provide partial control of the following perennial weeds:

- **Bahiagrass**
  - Fescue, tall
  - Trumpetcreaper
- **Bluestem, silver**
  - Johnsongrass
  - Vaseygrass

This product may be tank-mixed with Oust or Oust XP. If tank-mixed, use no more than 1 to 3 pints of this product with 1 to 2 ounces of Oust or Oust XP per acre. Use the lower rates of each product to control annual weeds less than 6 inches in height (or runner length) that are listed in this label and the Oust or Oust XP label. Use the higher rates as annual weeds increase in size and approach the flower or seedhead stages. These rates will also provide partial control of the following perennial weeds:

- **Bahiagrass**
  - Dewberry
  - Poison
- **Blackberry**
  - Dock, curly
  - Raspberry
- **Bluestem, silver**
  - Dogtooth
  - Trumpetcreaper
- **Broomsedge**
  - Fescue, tall
  - Vaseygrass
- **Dalzellgrass**
  - Vermilion, blue

Use only on well-established Bermudagrass. Bermudagrass injury may result from the treatment, but regrowth will occur under moist conditions. Repeat applications in the same season are not specified, since severe injury may occur.

**Roadside**

All of the methods of application described in the "GENERAL NON-CROP AREAS AND INDUSTRIAL SITES" section may be utilized along roadsides.

**Shoulder Treatments**

This product may be used on road shoulders. It may be applied with boom sprayers, shielded boom sprayers, high-volume off-center nozzles, hand-held equipment, and similar equipment.

**Guardrails, Other Obstacles to Mowing**

This product may be used to control weeds growing under guardrails and around signposts and other objects along the roadsides.

**Spot Treatment**

This product may be used as a spot treatment to control unwanted vegetation growing along roadsides.

**Tank Mixtures**

This product may be tank-mixed with the following products for shoulder, guardrail, spot and bar ground treatments:

- Atrazine
- Clarity
- Crossbow L
- Dicamba
- Doran
- Endurance
- Escort
- Escort XP
- Gallery 750F

See the "Mixing" section of this label for general instructions for tank mixing.

**Release of Bermudagrass or Bahiagrass**

This product may be used to control or partially control many winter annual weeds and fall fescue for effective release of dormant Bermudagrass or bahiagrass. Treat only when turf is dormant and prior to spring greenup.

For best results on winter annuals, treat when plants are in an early growth stage (less than 6 inches in height) after most have germinated. For best results on fall fescue, treat when fescue is at or beyond the 4- to 6-leaf stage.

**Tank Mixtures**

This product may also be tank-mixed with Oust, Oust or Oust XP for residual control. These tank mixtures may delay greenup.

Apply 0.6 to 0.8 fluid ounces of this product in a tank mix with 0.75 to 1.3 ounces of Oust per acre.

Read and follow all label directions for Oust.

Apply 0.6 to 0.8 fluid ounces of this product per acre alone or in a tank mixture with 0.25 to 0.5 ounces of Oust or Oust XP in 10 to 20 gallons of water per acre. Use the higher rate when treating annual weeds below 6 inches in height (or runner length). Use the higher rate as weeds increase in size or as they approach flower or seedhead formation. These rates will also provide partial control of the following perennial species:

- **Bahiagrass**
  - Fescue, tall
  - Trumpetcreaper
- **Bluestem, silver**
  - Johnsongrass
  - Vaseygrass

**Tank Mixtures**

This product may be tank-mixed with Oust or Oust XP for control or partial control of Johnsongrass and other weeds listed in the Oust label. Use 0.5 to 0.8 fluid ounces of this product with 0.75 to 1.3 ounces of Oust per acre.

Use the higher rates of each product for control of perennials or annual weeds greater than 6 inches in height.

This product may be tank-mixed with Oust or Oust XP. If tank-mixed, use no more than 1 to 2 ounces of Oust or Oust XP per acre. Use the lower rates of each product to control annual weeds less than 6 inches in height (or runner length) that are listed in this label and the Oust or Oust XP label. Use the higher rates as annual weeds increase in size and approach the flower or seedhead stages. These rates will also provide partial control of the following perennial weeds:
Bahiagrass Dock, curly Projoje
Bluestem, silver Dogweed Trumpet creeper
Brome Bitteroots Venetian
Brodograss Johnson grass Vaseygrass
Cable Grass Virginia blueb

Only one well-established Bermudagrass. Bermudagrass injury may result from the treatment, but regrowth will occur under moist conditions. Repeat applications of the tank mix in the same season are not specified, since severe injury may occur.

Active Growing Bahiagrass
For suppression of vegetative growth and seedhead inhibition of bahiagrass for approximately 45 days, apply 6 fluid ounces of this product in 10 to 40 gallons of water per acre. Apply 1 to 2 weeks after full bloom or after mowing to a uniform height of 3 to 4 inches. This application must be made prior to seedhead emergence.

For suppression up to 120 days, apply 4 fluid ounces of this product per acre, followed by an application of 2 to 4 fluid ounces per acre about 45 days later. Make no more than 2 applications per year.

Tank Mixtures: This product may be tank-mixed with Outrider for control or partial control of johnsongrass and other weeds listed in the Outrider label. Use 6 fluid ounces of this product with 0.75 to 2 ounces of Outrider per acre. Use the higher rates of both products for control of perennial weeds or annual weeds greater than 6 inches in height. Use only on well-established bahiagrass.

A tank mixture of this product plus Oust or Oust XP may be applied. Apply 6 fluid ounces of this product plus 0.25 ounce of Oust or Oust XP per acre 1 to 2 weeks following an initial spring mowing. Make only one application per year.

Foresite Site Preparation
This product is specified for the control or partial control of woody brush, trees and herbaceous weeds in forestry. This product is also specified for use in preparing or establishing wildlife openings within these products and maintaining logging roads.

This product is specified for use in site preparation prior to planting any tree species, including Christmas trees, eucalyptus, hybrid tree cultivars and silvicultural nursery sites.

Use higher rates of this product within the specified range for control of perennial weeds such as the hard-to-control perennial herbaceous weeds. For best results, apply to actively growing woody brush and trees after full leaf expansion and before fall color and leaf drop. Increase rates within the specified range for control of perennial herbaceous weeds any time after emergence and before seedheads, flowers or berries appear. Apply to the tillage of actively growing annual herbaceous weeds any time after emergence.

Tank Mixtures: Tank mixtures of this product may be used to increase the spectrum of vegetation controlled. When tank mixing, read and carefully observe the label claims, precautionary statements and all information on the labels of all products used. Use according to the most restrictive precautionary statements for each product in the mixture.

Note: For foresite site preparation, make sure the tank-mix product is approved for use prior to planting the desired species. Observe planting interval restrictions. Any specified rate of this product may be used in a tank mix with the following products for foresite site preparation.

Aristol Applications Concentrate Chopper
Aristol Applications Escort or Escort XP
Carson 3A Dust XP
Garden 4A Westar

For control of herbaceous weeds, use the lower specified tank mixture rates. For control of dense stands or tough-to-controlled woody brush and trees, use the higher specified rates.

Do not apply this product as an over-the-top broadcast spray for forestryclosing or hardwood release, unless otherwise specified on this label or in separate supplemental labeling for this product.

Pastes
This product may be applied to any pasture grass (Gramineae family), including bahiagrass, Bermudagrass, kikuyagrass, fescue, fescue, guineagrass, kikuyagrass, orchardgrass, pangola grass, ryegrass, timothy, and wheatgrass. Application can be made as a spot treatment, pasture application, pre-emergence, pasture renovation, or postemergent broadcast.

Preplant, Preemergence, Pasture Renovation
This product may be applied for weed control prior to planting or emergence of forage grasses. This product may also be applied to control perennial pasture species listed on this label prior to replanting.

If application rates total 3 quarts per acre or less, no waiting period between treatment and feeding or livestock grazing is required. If the rate is greater than 3 quarts per acre, remove domestic livestock before application and wait 8 weeks after application before grazing or harvesting.

Spot Treatment, Wiper Application
This product may be applied in pastures as a spot treatment, over the top of desirable grasses using wiper applications to control tall weeds. Applications may be repeated in the same area at 30-day intervals.

For spot treatments or wiper application methods using rates of 3 quarts of this product per acre or less, the entire field or any portion of it may be treated. When spot treatments or wiper application are made using rates above 3 quarts of this product per acre, no more than 10 percent of the total pasture may be treated at any one time. To achieve maximum performance, remove domestic livestock before application and wait 7 days after application before grazing live stock or harvesting for feed.

Postemergent Weed Control (Broadcast Treatment)
This product may be applied to pastures to suppress competitive growth and seed production of annual weeds and undesirable vegetation in pastures. For selective applications with broadcast spray equipment, apply 12 to 16 fluid ounces of this product per acre in early spring before desirable perennial grasses break dormancy and initiate green growth. Late fall applications may be made after undesirable perennial grasses have reached dormancy. Some stunting of perennial grasses will occur if broadcast applications are made when plants are not dormant. Use of higher application rates will cause stunting effects and reduction in growth. Do not apply more than 3 quarts of this product per acre per year onto pastures grasses except for recommends used as described previously in this section.

Range Lands
This product may control or suppress many annual weeds growing in perennial cool and warm-season grass rangelands, pastures, and industrial sites. Preventing weed seed production is critical to the successful control of annual grasses weeding these perennial grass sites. Follow-up applications in
sequential years should eliminate most of the viable seeds. Grazing of treated areas should be delayed to encourage growth of desirable perennials. Allowing desirable perennials to flower and reseed in the treated area will encourage successful transition.

**Bromus:** This product may be used to control or suppress downy brome (Bromus inermis), Japanese brome (Bromus japonicus), soft chess (Bromus mollis), cheatgrass (Bromus secalinus), cornsilk and jointed goatgrass found in rangelands, pastures and industrial sites. Apply 6 to 16 fluid ounces of this product per acre on a broadcast basis. For best results, treatment should coincide with early seedhead emergence of the most mature plants. Delaying the application until this growth stage will maximize the emergence of other weedy grass flushes. Applications should be made to the same site each year until good stands are depleted and the desirable perennial grasses can become reestablished on the site.

**Medusahead:** To control or suppress medusahead, apply 16 fluid ounces of this product per acre at the 3-leaf stage when plants are actively growing. Delaying applications beyond this stage will result in reduced or unacceptable control. Repeat applications in subsequent years may be necessary to eliminate the seedbank before reestablishment of desirable perennial grasses. Applications may be made in the fall or spring.

Applications may be made using ground or aerial equipment. Aerial applications for these sites may be made using fixed wing or helicopter equipment. For aerial applications, apply 2 to 10 gallons of water per acre. For applications using ground equipment, apply 10 to 20 gallons of water per acre.

**Soil Treatment, Wiper Application**

This product may be applied in rangelands, pastures or industrial sites as a spot treatment, or over the top of desirable grasses using wiper applications to control tall weeds. Applications may be repeated at the same site at 30-day intervals. For spot treatments or wiper application methods using rates of 3 quarts of this product per acre or less, the entire site or any portion of it may be treated. When spot treatments or wiper applications are made using rates above 3 quarts of this product per acre, no more than 10 percent of the total site may be treated at any one time. To achieve maximum performance, remove domestic livestock before application and wait 7 days after application before grazing livestock or harvesting for feed.

**Conservation Reserve Program (CRP)**

This product may be used for renovation (replanting out of CRP) site preparation, postemergence weed control in dormant CRP grasses, or wiper application on CRP land.

**Renovation (Replanted out of CRP), Site Preparation**

This product may be used to prepare CRP land for crop production. Refer to Federal, State or local use guides for CRP renovation recommendations.

**Postemergence Weed Control in Dormant CRP Grasses, Wiper Application**

Apply this product to suppress competitive growth and seed production of undesirable vegetation on CRP land. Applications may be made using wiper applicators to control tall weeds, or as a broadcast or spot treatment to dormant CRP grasses. For selective applications with broadcast spray equipment, apply 8 to 12 fluid ounces of this product per acre in early spring before desirable CRP grasses such as crested and tall wheatgrass, broom dand and wheatgrass. Late fall applications can be made after desirable perennial grasses have reached dormancy.

Some stands of CRP perennial grasses will occur if broadcast applications are made when plants are not dormant. No waiting period is required between application and grazing or harvesting for feed. Do not apply more than 3 quarts per acre per year onto CRP land.

**Habitat Management**

**Habitat Restoration and Management**

This product may be used to control exotic and other undesirable vegetation in habitat management and natural areas, including rangeland and wildlife refuges. Applications can be made to allow recovery of native plant species, prior to planting desirable native species, and for similar broadcast applications.

**Wildfire Fight Plants**

This product may be used as a site preparation treatment prior to planting wildlife food plots. Any wildlife food species may be planted after applying this product, or native species may be allowed to reestablish in the area. Ifillage is needed to prepare a seedbed, wait 7 days after application before allowing translocation into underground plant parts.

**Hollow Stem Injections**

This product may be applied through hand-held injection devices that deliver specified amounts of this product into targeted hollow-stem plants growing in any non-crop site specified on this label.

For control of the following hollow-stemmed plants, follow the use instructions below:

- **Japanese Knotweed, Polygonum cuspidatum**
  - Inject 5 ml per stem of this product between second and third internode.
- **Siberian Knotweed, Polygonum sachalinense**
  - Inject 5 ml per stem of this product between the second and third internode.
- **Hemp Bentgrass, Puccinellia maritima**
  - Inject one leaf cane per plant 12 inches above the root crown with 5 ml of a 5% w/w solution of this product.
- **Tufted Hairgrass, Elymus repens**
  - Inject one leaf cane per plant 12 inches above the root crown with 5 ml of a 5% w/w solution of this product.
- **Field Horsetail, Equisetum arvense**
  - Inject one segment above the root crown with 0.5 ml per stem of this product. Use a small syringe that calibrates to this rate.
- **Canada Thistle, Cirsium arvense**
  - Cut 6 to 9 of the tallest plant at bud stage in a clamp with clippers. Use a canky needle that is pushed into the stem and then slowly removed as 0.5 ml per stem of this product is injected into the stem.

Note: The combined total for all treatments must not exceed 10.6 quarts of this product per acre. At 5 ml per stem, 7 quarts should treat approximately 1300 stems per acre.

**Ornamentals, Nurseries (Plants and Trees), and Christmas Trees**

This product may be used for general weed control prior to planting or around established ornamentals, or any woody tree, shrub, or vine species, including arborvitae, azalea, boxwood, crape myrtle, eucalyptus, eucryphias, fir, Douglas fir, cypress, lilac, magnolia, maple, oak, poplar, pine, spruce or yew, in any production site. **UNLESS OTHERWISE DIRECTED, THIS PRODUCT IS NOT SPECIFIED FOR USE AS AN OVER-THE-TOP BROADCAST SPRAY IN ORNAMENTALS AND CHRISTMAS TREES. Care must be taken to avoid contact of spray drift or mist with foliage or green banks of desirable species.** This product may be used to control weeds growing in and around greenhouses.
and shrubbery. Desirable vegetation must not be present during application and air circulation fans must be turned off.

**Types of Applications:**
- Site Preparation
- Post-directed, Trim-and-edge
- Wiper Application

**Site Preparation**
This product may be used prior to planting any tree, shrub, or vine in an ornamental, nursery, or production setting, including Christmas tree species.

**Post-directed, Trim-and-edge**
This product may be used in a post-directed spray around established woody species, or to trim and edge around trees, buildings, sidewalks and roads, potted plants and other objects in a production setting. Desirable plants may be protected from the spray solution by using shields or covers made of cardboard or other impermeable material.

**Wiper Application**
This product may be used through wick or other suitable wiper applicators to control or partially control undesirable vegetation around established trees, shrubs, or vines. See the "Selective Equipment" section of this label for further information about the proper use of wiper applicators.

**Silviculture Sites and Rights-of-Way**

**Note:** Not recommended for use as an over-the-top broadcast spray in silvicultural nurseries.

When applied as directed for "Noncrop Uses" under conditions described, this product controls undesirable vegetation listed on this label. For specific rates of application and instructions for control of various brush, annual and perennial weeds, see the "WEEDS CONTROLLED" section of this label.

Do not exceed 10.6 quarts of this product per acre per year.

**Aerial Application**
- This product may be applied using aerial spray equipment for silviculture site preparation, and rights-of-way treatments. See the "Application Equipment and Techniques" part of the "Mixing, Additives, and Application Instructions" section of this label for information on how to apply this product by air.

**Do Not Apply This Product by Air to Rights-of-Way Sites in the State of California.**

**Site Preparation**
Following preplant applications of this product, any silvicultural species may be planted.

**Postdirected Spray**
In established silvicultural sites, use as a spray on the foliage of undesirable vegetation. Care must be exercised to avoid contact of spray, drift, or mist with foliage or green bark of desirable species.

**Cut Stumps**
Cut stump treatments may be made on any site listed on this label. This product will control many types of woody brush and tree species, some of which are listed below. Apply this product using suitable equipment to ensure coverage of the entire cambium. Cut trees or stumps close to the soil surface. Apply a 50- to 100-percent solution of this product to the freshly-cut surface immediately after cutting. Delays in application may result in reduced performance. For best results, applications should be made during periods of active growth and full leaf expansion.

- Alder
- Eucalyptus
- Madrone
- Oak
- Pepper, Brazilian
- Pine, Austrian
- Reed, giant
- Saltcedar

**DO NOT MAKE CUT STUMP APPLICATIONS WHEN THE ROOTS OF DESIRABLE**

**WOODY GRASS OR TREES MAY BE GRAFTED TO THE ROOTS OF THE CUT STUMP:** Some sprouts, stumps, or trees may share the same root system. Adjacent trees having a similar age, height and spacing may signal shared roots. Whether grafted or shared, injury is likely to occur to root-treated trees when one or more trees sharing common roots are treated.

**Injection and Frill (Woody Brush and Trees)**
This product may be used to control woody brush and trees by injection or foliar applications. Apply this product using suitable equipment that must penetrate into the living tissue. Apply the equivalent of 0.04 fluid ounce (1 mL) of this product per each 2 to 3 inches of trunk diameter at breast height (DBH). This is best achieved by applying a 50- to 100-percent concentration of this product to the root tip of the tree or as cuts evenly spaced around the tree below all branches. As tree diameter increases in size, better results are achieved by applying diluted material to a continuous frill or more closely spaced cuttings. Avoid application techniques that allow runoff to occur from frilled or cut areas in species that roots may freely. In species such as this, make the full cuts at an angle, slope to produce a cupping effect and use a 100-percent concentration of this product. For best results, application should be made during periods of active growth and after full leaf expansion. This product will control many species, some of which are listed below:

**Utilities Sites**
In utilities, this product is specified for use along electrical power and telephone rights-of-way, and in other areas associated with other rights-of-way, such as substations, railroads, railroads or similar rights-of-way that run in conjunction with utilities. This product may be used in utility sites and substations for bare ground, trim-and-edge around objects, spot treatment of unwanted vegetation and to eliminate unwanted weeds growing in established shrub beds or ornamental plantings. This product may be used prior to planting a utility site or ornamentals, flowers, turfgrass (sod or seed), or beginning construction projects. Repeated applications of this product may be used, as weeds emerge, to maintain bare ground.

This product is also specified for use in pressurizing or establishing wildlife openings within these sites, maintaining access roads and for side trimming along utility rights-of-way.

For control of herbaceous weeds, use the lower specified tank mixture rates. For control of dense stands or tough-to-control woody brush and trees, use the higher specified rates.

**Bare Ground, Trim-and-Edge**
This product may be used in utility sites and substations for bare ground, trim-and-edge around objects, spot treatment of unwanted vegetation and to eliminate unwanted weeds growing in established shrub beds or ornamental plantings. This product may be used prior to planting a utility site or ornamentals, flowers, turfgrass (sod or seed), or beginning construction projects. Repeated applications of this product may be used, as weeds emerge, to maintain bare ground.

**Tank Mixtures:** This product may be tank mixed with the following products provided that the specific product used is registered for application on these sites...
Grass Seed or Sod Production

This product may be used in grass seed and sod production for perennial, annual, and cool-season grasses. It is recommended for use in established stands, renovation, and reseeding. Applications should be made in the spring and summer, before the turfgrass becomes too dormant. For best results, apply the product at the correct rate and use the appropriate equipment. Wet and dry applications are available. Wet applications are preferred for best results.

Wiper Application

This product may be applied over the top of desirable grasses using wiper applications for the control of tall grasses. Contact of the product with desirable vegetation may result in discoloration, stunting, or destruction. Such damage shall be the sole responsibility of the applicator.

Spot Treatment

Apply a 1.5-percent solution of this product using hand-held spray equipment to control weeds within established vegetation. This product is not recommended for use on ornamental plants or other unwanted vegetation after sod is harvested. The crop sprayed in the treated area will be killed. Take care to not spray or allow spray to drift outside the target area in order to avoid unwanted crop destruction.

Creating Rows in Annual Ryegrass

Apply 1 to 2 pints of this product per acre. Best results are obtained when applications are made before the ryegrass reaches 6 inches in height. The higher rate within the specified range is recommended when ryegrass is greater than 6 inches in height. Be careful not to apply spray to full leaves of the desired row spacing. Be careful not to apply spray to full leaves of the desired row spacing. Be careful not to apply spray to full leaves of the desired row spacing.

Grass Seed or Sod Production

This product controls most existing vegetation for purposes of removing turf or forage grass seed areas or for establishing turfgrass grown for sod. It may also be used to destroy remaining undesired grass vegetation when production fields are converted to alternate species or crops. Make applications before, during, or after planting, or for renovation purposes. For maximum control, apply the product after all regular mowing has been completed. The amount of surfactant required is approximately 1 gallon of water per acre. Apply the product at the rate of 1 gallon per acre. Applications should be made at least 30 days after planting. Where post-treatment is necessary, surfactant treatment must be applied prior to treatment. For warm-season grasses, such as Bermuda grass, applications should be made at least 30 days after planting. Where post-treatment is necessary, surfactant treatment must be applied prior to treatment. For warm-season grasses, such as Bermuda grass, applications should be made at least 30 days after planting. Where post-treatment is necessary, surfactant treatment must be applied prior to treatment. For warm-season grasses, such as Bermuda grass, applications should be made at least 30 days after planting. Where post-treatment is necessary, surfactant treatment must be applied prior to treatment.

Weeds Controlled

Always use the higher rate of this product per acre within the specified range when weed growths are heavy or dense or weeds are growing in an undisturbed (non-cultivated) area. Reduced results may occur when treating weeds heavily covered with dust. For weeds that have been mowed, grazed, or cut, allow growth to occur prior to treatment. Refer to the following label sections for specific rates for controlling annual and perennial weeds and woody brush and trees. For difficult to control perennial weeds and woody brush and trees, where plants are growing under stressful conditions or where infestations are dense, this product may be used at 5 to 10 quarts per acre for enhanced results.

Annual Weeds

Use 1 quart per acre if weeds are less than 6 inches in height or runnel length and 1.5 to 4 quarts per acre if weeds are over 6 inches in height or runnel length or when weeds are growing under stressed conditions. Use the higher rate for tough-to-control species regardless of the weed size at application. Treat tough-to-control weeds early when they are relatively small. This product may be tank-mixed provided the tank-mix product is registered for use on the target site. Refer to the individual product labels for approved sites and application rates. For spray-to-water applications, apply a 0.5-percent solution of this product to weeds less than 6 inches in height or runnel length. For annual weeds over 6 inches tall, or for smaller weeds growing under stressed conditions, use a 1- to 2-percent solution. Use the higher rate for tough-to-control species or for weeds over 24 inches tall.

Apply prior to seedhead formation in grass or bud formation in broadleaf weeds. For low-volume directed spray applications, use a 4- to 7-percent solution of...
this product. Spray coverage should be uniform with at least 50 percent of the foliage contacted. Coverage of the top one half of the plant is important for best results. To ensure adequate spray coverage, spray both sides of large or tall weeds when foliage is thick and dense or where there are multiple spouts.

**WEED SPECIES**

- Amida, spurred
- Barley
- Barnyardgrass
- Bittercress
- Brassica, flywheel
- Black nightshade
- Bluegrass, annual
- Bluegrass, bulbous
- Bromo, downy
- Bromo, Japanese
- Browngrass panicum
- Buttercup
- California fuchsia
- Canada geananium
- Carpet grass
- Cheesehead (Maika panissus)
- Chickweed
- Cocklebur
- Cot
- Corn speedwell
- Crabgrass
- Dwarf dandelion
- Eastern maizegrass
- Eleocharis
- Fall panicum
- False dandelion
- Falseox, smoothox
- Hidbird biet
- Field pennycress
- Filarce
- Fisbane, annual
- Fisbane, hairy (Conyza benjaminii)
- Fisbane, rough
- Florida pusley
- Foust
- Giantgrass, jointed
- Goosegrass
- Grain sorghum (milo)
- Groundsel, common
- Hemp sesbania
- Hemlock
- Horsetail/Marestail (Conyza canadensis)
- Italian ryegrass
- Johnsongrass, seeding
- Jonagold
- Knotweed

* When using field broadcast equipment (aerial applications or boom sprayers using flat-flat nozzles) these species will be controlled or partially controlled using 1 pint of this product per acre. Applications must be made using 3 to 10 gallons of carrier volume per acre. Use nozzles that ensure thorough coverage of foliage and treat when weeds are in an early growth stage.

**Perennial Weeds**

Best results are obtained when perennial weeds are treated after they reach the reproductive stage of growth (seedhead initiation in grasses and bud formation in broadleaves). For non-flowering plants, best results are obtained when the plants reach a mature stage of growth. In many situations, treatments are required prior to these growth stages. Under these conditions, use the highest applicable rate within the specified range.

Ensure thorough coverage when using spray-to-wet treatments with hand-held equipment. For best results, use a 1.5-percent solution on hard-to-control perennials such as Bermudagrass, dock, field bindweed, hemp dogbane, milkweed and Canada thistle.

For low-volume directed spray applications, use a 5- to 10-percent solution of this product. Spray coverage should be uniform with at least 50 percent of the foliage contacted. Coverage of the top one half of the plant is important for best results. To ensure adequate spray coverage, spray both sides of large or tall weeds when foliage is thick and dense or where there are multiple spouts.

Allow 7 or more days after application before tillage.

*Partial control

**Woody Brush and Trees**

Apply this product after fall leaf expansion, unless otherwise directed. Use the higher rate for larger plants and/or dense areas of growth. On vines, use the higher rate for plants that have reached the woody stage of growth. Best results are obtained when application is made in late summer or fall after frost formation.

In arid areas, best results are obtained when applications are made in the spring to early summer when brush species are at high moisture content and are flowering.

For best results, when using hand-held equipment, use a 1.5-percent solution on hard-to-control woody brush and trees. For low volume directed-spray applications, apply a 5- to 10-percent solution of this product. Spray coverage should be uniform with at least 50-percent of the foliage contacted. Coverage of the top one-half of the plant is important for best results. To ensure adequate spray coverage, spray both sides of large or tall woody brush and trees, when foliage is thick and dense, or where there are multiple spitches.

Symptoms may not appear prior to frost or senescence with fall treatments. Allow 7 or more days after application before tillage, mowing or removal. Repeat treatments may be necessary to control plants regenerating from underground parts or seed. Some autumn colors on undesirable deciduous species are acceptable provided no major leaf drop has occurred. Reduced performance may result if fall treatments are made following a frost.

LIMIT OF WARRANTY AND LIABILITY

AXXES USA, LLC warrants that this product conforms to the chemical description on the label and is reasonably fit for the purposes set forth in the Complete Directions for Use label booklet ("Directions") when used in accordance with those Directions under the conditions described therein. TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, NO OTHER EXPRESS WARRANTY OR IMPLIED WARRANTY OF FITNESS FOR PARTICULAR PURPOSE OR MERCHANTABILITY IS MADE. This warranty is also subject to the conditions and limitations stated herein.

Buyer and all users shall promptly notify AXXES USA, LLC of any claims whether based in contract, negligence, strict liability, other tort or otherwise.

To the extent consistent with applicable law, buyer and all users are responsible for all loss or damage from use or handling which results from conditions beyond the control of AXXES USA, LLC, including, but not limited to, incompatibility with products other than those set forth in the Directions, application to or contact with desirable vegetation, failure of this product to control weed biotypes which develop resistance to glyphosate, unusual weather, weather conditions which are outside the range considered normal at the application site and for the time period when the product is applied, as well as weather conditions which are outside the application ranges set forth in the Directions, application in any manner not explicitly set forth in the Directions, moisture conditions outside the moisture range specified in the Directions, or the presence of products other than those set forth in the Directions in or on the soil, crop or treated vegetation.

AXXES USA, LLC does not warrant any product reformulated or repackaged from this product except in accordance with AXXES USA, LLC's stewardship requirements and with express written permission from AXXES USA, LLC.

TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, THE EXCLUSIVE REMEDY OF THE USER OR BUYER, AND THE LIMIT OF THE LIABILITY OF AXXES USA, LLC OR ANY OTHER SELLER FOR ANY AND ALL LOSSES, INJURIES OR DAMAGES RESULTING FROM THE USE OR HANDLING OF THIS PRODUCT (INCLUDING CLAIMS BASED IN CONTRACT, NEGLIGENCE, STRICT LIABILITY, OTHER TORT OR OTHERWISE) SHALL BE THE PURCHASE PRICE PAID BY THE USER OR BUYER FOR THE QUANTITY OF THIS PRODUCT INVOLVED OR, AT THE ELECTION OF AXXES USA, LLC OR ANY OTHER SELLER, THE REPLACEMENT OF SUCH QUANTITY OR, IF NOT ACQUIRED BY PURCHASE, REPLACEMENT OF SUCH QUANTITY, TO THE FULL EXTENT PERMITTED BY LAW, IN NO EVENT SHALL AXXES USA, LLC OR ANY OTHER SELLER BE LIABLE FOR ANY INCIDENTAL, CONSEQUENTIAL OR SPECIAL DAMAGES.

Upon opening and using this product, buyer and all users are deemed to have accepted the terms of this LIMIT OF WARRANTY AND LIABILITY which may not be varied by any verbal or written agreement. If terms are not acceptable, return at once unopened.
