SWIMMING POOL ALGICIDE

BioGuard® has a wide variety of products that prevent specific pool situations. These products are designed as "inhibits".

The BioGuard Care System has three important parts that help you maintain crystal blue sparkling water:

A. Sanitizer to control bacteria
B. A prevention algicidal to stop algae before it starts
C. A shock to destroy contaminants

A preventative algicidal to stop algae before it starts. All parts of the BioGuard Care System are vital to achieve beautiful water.

BioGuard Back-Up® is the preferred algae preventative for the BioGuard Care System. Weekly use of this product prevents algae before it starts. This product is formulated to complement most swimming pool sanitizers;

This product is a highly effective algae killer and algae preventative. The wetting agent in this product allows it to penetrate small cracks where algae are likely to form. This product is effective and non-staining when used as directed. This product kills and prevents all types of algae: black algae, green algae, and mustard algae. This product will not evaporate and its algae fighting actions actually increase as pool water temperature increases. This product provides a residual effectiveness that protects your pool against algae formation while keeping your pool water sparkling clear. This product protects the unattended pool when you're away (refer to "Vacation Treat" section in Directions For Use). This product may foam and therefore should not be used for spa treatment or in pools with attached spas, jetted returns, or water features.

Use this product weekly when using the BioGuard UV System to prevent algae.

DIRECTIONS FOR USE: It is a violation of federal law to use this product in a manner inconsistent with its labeling. Reread label and use strictly in accordance with precautionary statements and directions.

Ensure all pool equipment is working properly. Clean or replace filter following manufacturer's directions. Adjust pH to between 7.2-7.8. Adjust chlorine residual to 1-4 ppm. Let pool water warm to 80°F. Use stabilizer to establish a minimum stabilizer level of 30-40 ppm to reduce the degradative effects of sunlight upon the chlorine residual. Check for metals in pool water and add a scale inhibitor to prevent scaling of pool surface due to metals. Check chlorine residual and adjust to 1-4 ppm. When using other products as outlined in directions for this product, always follow directions on those products. Wait at least 15 minutes after application before entering pool.

1. For maintenance: For initial application, pour 25 fluid ounces directly into pool per 25,000 gallons of water (4ppm). For routine maintenance: For regular application, pour 1 fluid ounce directly into pool per 5,000 gallons of water (0.5 ppm) weekly. For two week interval application, pour 2 fluid ounces directly into pool per 5,000 gallons of water (1 ppm) biweekly. Following heavy rain showers, add an additional 1 fluid ounce per 5,000 gallons of water.

To "vacation treat": While away for one week or more: Add 4 fluid ounces of this product per 5,000 gallons (2 ppm) for every week unattended. Pour product around the edges of the shallow end of the pool if shock is also being used in the deep end of the pool.

2. For algae treatment: For treatment of visible algae: Add one pound of BioGuard Main Strip Out Extreme® per 10,000 gallons of water, or one pound of BioGuard Maintain Main Shock® per 12,000 gallons of water. Follow application directions on these products. With pump and filter running, pour 25 fluid ounces of this product directly into pool per 25,000 gallons of water in areas of heavy algae growth. Continuously circulate pool water for the next 24 hours. Afterwards, thoroughly brush pool surfaces. Prior to re-entry, test chlorine level. Do not re-enter pool until chlorine level is between 1-4 ppm. In cases of persistent algae, repeat brushing and product application after 2-4 days.

3. For resistant algae treatment: For treatment of resistant algae: With pump and filter running, add five pounds of BioGuard Maintain Main Shock® per 12,000 gallons of pool water. Brush any undisolved product from pool surface. Follow application directions on BioGuard Maintain Main Shock® label. Wait 15 minutes, then pour 40 fluid ounces of this product directly into pool per 25,000 gallons of water to prevent areas of heavy algae growth. Continuously circulate pool water for the next 24 hours. Afterwards, thoroughly brush pool surfaces. Prior to re-entry, test chlorine level. Do not re-enter pool until chlorine level is between 1-4 ppm. Chemically cleaning the filter is recommended 3-4 days after treatment.

DETERMINE POOL CAPACITY: Rectangular Pools - Length x width x depth in feet x 7.5 equal gallons. Round and Oval Pools - length x width x depth in feet x 5.3 equal gallons.

STORAGE AND DISPOSAL: Keep this product in original tightly closed container when not in use. Store in a cool, dry, well ventilated area away from heat or open flame. CONTAINER DISPOSAL: Non-refillable container. Do not use or refill the container. Offer for recycling if available. Triple rinse container (or equivalent) promptly after emptying.

PRECAUTIONARY STATEMENTS:

HAZARDS TO HUMANS AND DOMESTIC ANIMALS:

DANGER: Contact, Causes severe eye damage and skin burns. May be harmful if swallowed, absorbed through skin, or inhaled. Do not get in eyes, on skin or on clothing. Do not breathe spray or vapor mist. Wear protective eye wear (goggles, face shield, or safety glasses), protective clothing and rubber gloves when mixing this product. Wash thoroughly with soap and water after handling and before eating food, drinking water, or using tobacco. Remove contaminated clothing and wash before reuse.

FIRST AID: IF IN EYES: Hold open upper and lower lids and jointly with water for 15-20 minutes. Remove contact lenses, if present, and flush eyes for an additional 5 minutes with water. Rinse eyes with large amount of water or Eye Wash Solution. IF INHALED: Move person to fresh air. If person is not breathing, call 911 or get immediate medical attention. If person is breathing, give artificial respiration, if needed. IF SWALLOWED: Call poison control center or doctor for treatment advice. IF MODIFIED: Call poison control center or doctor immediately for treatment advice. Have person drink a glass of water if able to swallow. Do not induce vomiting unless told to do so by the poison control center or doctor. Do not give anything by mouth to an unconscious person. DO NOT USE EMESIS INDUCERS.

PHYSICAL OR CHEMICAL HAZARDS:

This product is toxic to fish and aquatic organisms.

NOTE: Buyer assumes all responsibility for safety and use in accordance with directions.
