FOR DISTRIBUTION AND USE ONLY WITHIN THE STATE OF WASHINGTON

DIRECTIONS FOR USE

• It is a violation of Federal law to use this product in a manner inconsistent with its labeling.
• This labeling must be in the possession of the user at the time of application.
• Follow all applicable directions, restrictions, Worker Protection Standard requirements, and precautions on the EPA registered label.

DILL

Apply Vegetable Pro by ground at the rates listed below in a minimum of 20 gallons of water per acre. For best results, make two applications of Vegetable Pro. Make the first application before planting and make the second application after planting. Vegetable Pro may also be applied through irrigation systems. Refer to the EPA-registered label for chemigation directions.

Preplant: Broadcast 1.5 pints per acres before planting and water incorporate.

Postplant: Broadcast 1.5 pints per acre after planting and water incorporate. Apply before weeds are two inches tall.

Weeds controlled by Vegetable Pro include filaree, mustard species, nightshade species, pineappleweed, sowthistle, and volunteer potato.

WSDA Chemigation Guidance:
Application off-site is prohibited. The chemigation application must be continuously observed whenever sensitive areas as defined in WAC 16-202-1002(44) (including but not limited to schools, parks, dwellings, occupied buildings or structures, public roadways, and waters of the state) are at risk of being exposed to drift, runoff, or overspray. In order to minimize the potential for application off-site, WSDA recommends that the product only be applied through low pressure irrigation systems (defined as 2 to 35 pounds/square inch measured at the nozzle) with a nozzle release height no higher than 3 feet above the target crop, and that end guns be disabled throughout the application.

An inspection port or a direct access point is required, and it must be positioned immediately upstream of the irrigation mainline check valve and be of sufficient size to allow visual and manual inspection of the check valve and low pressure drain. The inspection port or access point must have a minimum diameter of four inches, unless an alternative access system is approved by WSDA (WAC 16-202-1012[1]).

The chemigation application tank cannot be placed within 20 feet of the wellhead or other sensitive areas. Mixing or loading activities cannot occur within 20 feet of the wellhead or other sensitive areas (WAC 16-202-1008[1]).

WSDA Chemigation Rules (WAC 16-202-1001 through WAC 16-202-1024), and information on USEPA Authorized Alternative Chemigation Safety Equipment, Distribution Uniformity and other chemigation topics are available on the WSDA website (http://agr.wa.gov/PestFert/ChemFert/default.aspx).
RESTRICTIONS/PRECAUTIONS:

- Do not enter or allow worker entry during the restricted-entry interval (REI) of 12 hours.
- Do not apply more than 3 pints per acre per season.
- Do not apply this product by air.
- Do not harvest dill within 48 days of application.
- To avoid injury to dill:
  - Do not use on sand or loamy sand.
  - Do not apply if dill is under water stress.
  - Do not apply within two weeks after an application of any tank mix containing an oil-based adjuvant.
- Certain uses of prometryn may be restricted by a U.S. District Court final order. You may refer to the WSDA Endangered Species Program web site at [http://agr.wa.gov/PestFert/natresources/Buffers.aspx](http://agr.wa.gov/PestFert/natresources/Buffers.aspx) for information regarding pesticides that are impacted by the final order.

Rotational Crops: The following crops may be seeded 5 months after applying Prometryn 4L on dill: cabbage, celery, corn, and peas. Onions and red beets may not be planted within 8 months of applying Prometryn 4L.

WSDA Container Disposal Guidance:
Pesticide containers must be properly cleaned prior to disposal. The best time to clean empty pesticide containers is during mixing and loading because residue can be difficult to remove after it dries. Triple rinse (or pressure rinse) the pesticide container, empty all pesticide rinse water into the spray tank, and apply to the labeled crop or site. Recycling cleaned containers is the best method of container disposal. Information regarding the recycling of empty and cleaned plastic pesticide containers in Washington is available on the WSDA Waste Pesticide Program web site at [http://agr.wa.gov/PestFert/Pesticides/WastePesticide.aspx](http://agr.wa.gov/PestFert/Pesticides/WastePesticide.aspx). Cleaned containers may also be disposed of in a sanitary landfill if permitted by the county. Burning is not a legal method of container disposal in Washington.

This label for Vegetable Pro expires and must not be distributed or used in accordance with this SLN registration after December 31, 2014.
