**DIRECTIONS FOR USE**

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

**PIGMENTS AND FILLER SLURRIES: FOR PAPER AND PAPERBOARD:** (For use in food and non-food contact pigments and filler slurries): Use from 0.1 to 0.6 lbs. of AMA-4750 per 1,000 lbs. dry powder to produce a concentration of 100 to 600 ppm as product (based on slurry solids) in the mixed slurry.

**WATER BASED COATINGS FOR PAPER AND PAPERBOARD:** NOTE: For use in non-food contact coatings only. Use from 0.1 to 0.6 lbs. of AMA-4750 per 1,000 lbs. dry powder to produce a concentration of 100 to 600 ppm as product (based on slurry solids) in the mixed slurry.

**AQUEOUS METAL WORKING FLUIDS:** AMA-4750 should be added to a metalworking fluid system at a point of uniform mixing such as the fluid collection tank. Additional mixes may be intermittently (SLUG DOSE) at intervals of one week or less.

**Initial Dose:** When the system is noticeably fouled apply 1.8 to 5.4 gallons of AMA-4750 per 10,000 gallons of metalworking fluid to the system. Repeat until control is achieved.

**Subsequent Dose:** When microbial control is evident, add 0.7 to 3.6 gallons of AMA-4750 per 10,000 gallons of metalworking fluid to the system weekly, or as needed to maintain control. Badly fouled systems should be cleaned before treatment is begun.

**GENERAL PRESERVATIVE USE:** AMA-4750 is recommended for use in aqueous or water containing products and systems, including industrial, institutional and consumer can-processes and products, to control the growth of bacteria and fungi. For effective preservation, add AMA-4750 to the product formulation at a rate of 0.02% to 0.20% (200 to 2,000 ppm) based on the weight content of the product (0.2 to 2.0 lbs AMA-4750 per 1,000 lbs water content). Mix uniformly.

**Preservative for Concentrates:** For use in concentrates where effective preservation is needed after dilution, add AMA-4750 to the product formulation at a rate such that the diluted end-use product will contain 0.02% to 0.20% AMA-4750. At no time during the preservation process should the level of AMA-4750 exceed 2.0%.

**Concrete Admixtures:** For effective preservation of concrete admixtures, add AMA-4750 to the product formulation at a rate of 2,000 to 8,000 ppm based on the weight of the admixture (2.0 to 8.0 lbs AMA-4750 per 1,000 lbs. concrete admixture). Mix uniformly.

**IN CASE OF AN EMERGENCY:** Endangering life or property involving this product, call CHEMTREC 1-800-424-9300.
