FOR ORGANIC PRODUCTION

Active Ingredient: Paecilomyces lilacinus strain 251* .................................................. 6.0%
Other Ingredients: ........................................................................................................... 94.0%
Total: ............................................................................................................................ 100.0%
*Contains a minimum of 1 X 10^10 viable spores/gram

PRECAUTIONARY STATEMENTS
HAZARDS TO HUMANS AND DOMESTIC ANIMALS
CAUTION
Harmful if swallowed, if absorbed through skin or inhaled. Avoid contact with skin, eyes or clothing. Avoid breathing dust or spray mist. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco or using the toilet. Remove and wash contaminated clothing before reuse.

PERSONAL PROTECTIVE EQUIPMENT (PPE):
Applicators and other handlers must wear:
• Long-sleeved shirt and long pants
• Waterproof gloves
• Shoes plus socks

Mixers/loaders and applicators must wear a dust/mist filtering respirator meeting NIOSH standards of at least N-95, R-95 or P-95. Repeated exposure to high concentrations of microbial proteins can cause allergic sensitization.

Follow manufacturer's instructions for cleaning/maintaining PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry.

ENGINEERING CONTROLS:
When handlers use closed systems or enclosed cabs in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170.240(d)(4)-5)], the handler PPE requirements may be reduced or modified as specified in the WPS.

IMPORTANT: When reduced PPE is worn because a closed system is being used, handlers must be provided all PPE specified above for "applicators and other handlers" and have such PPE immediately available for use in an emergency, such as a spill or equipment breakdown.

USER SAFETY RECOMMENDATIONS
Users should:
• Remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
• Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

ENVIRONMENTAL HAZARDS:
For terrestrial uses: Do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark.
Do not contaminate water when disposing of equipment wash waters or rinsate.

DIRECTIONS FOR USE
It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Do not apply this product in a way that will contact workers or other persons, either directly or to intertidal areas below the mean high water mark.

AGRICULTURAL USE REQUIREMENTS
Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR Part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE), and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

EXCEPTION: If the product is soil incorporated or soil injected, the Worker Protection Standard, under certain circumstances, allows workers to enter the treated area if there will be no contact with anything that has been treated.

PPE required for early entry to treated areas (that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water) is:
• Coversalls
• Waterproof gloves
• Shoes plus socks

NON-AGRICULTURAL USE REQUIREMENTS
The requirements in this box apply to uses of this product that are not within the scope of the Worker Protection Standard (WPS) for agricultural pesticides (40 CFR Part 170).

The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries or greenhouses.

Keep unprotected persons out of treated areas until sprays have dried.
PRODUCT INFORMATION:
MeloCon® WG is a water dispersible granule formulation containing spores of a soil fungus that parastitizes many species of plant-parasitic nematodes. MeloCon® WG is intended for use as part of an Integrated Pest Management (IPM) system. When used as part of a complete pest management program, MeloCon® WG reduces crop damage by plant-parasitic nematodes.

FOR CONTROL OF CROP DAMAGE CAUSED BY THE FOLLOWING PESTS:
Awi nematodes (Dolichoderus species)
Bursrowing nematodes (Pratylenchus similes)
Citrus nematode (Tylenchulus semipenetrans)
Cyst nematodes (Heterodera and Globodera species)
False root-knot nematodes (Nacobbus species)
Lance nematodes (Hipoilaimus species)
Lesion nematodes (Pratylenchus species)
Reniform nematode (Rotylenchulus reniformis)
Ring nematodes (Criconemoides, Criconemella and Mesocriconema species)
Root-knot nematodes (Meloidogyne species)
Spiral nematodes (Helicotylenchus and Rotylenchus species)
Stem nematode (Ditylenchus dipsaci)
Sting nematode (Belonolaimus longicaudatus)
Stubby root nematodes (Trichodorus and Paratrichodorus species)
Stunt nematodes (Tylenchorhynchus species)

MIXING DIRECTIONS:
• Determine the total volume of water needed for application according to the application tables below.

Use Directions

<table>
<thead>
<tr>
<th>Crop group, crop or use site</th>
<th>Application type/timing</th>
<th>Application rates and instructions</th>
</tr>
</thead>
</table>
| Fruiting vegetables, including Tomato, Tomatillo, Peppers (all types) and Eggplant | Application to field soils before planting or transplanting | Apply 2 to 4 pounds of MeloCon® WG per acre. Applications can be made by the following methods:  
  • Drenching, drip (trickle) or sprinkler application (see “Instructions for MeloCon® WG Application through Irrigation Systems”). To enhance penetration of spores into the root zone, consider mixing MeloCon® WG with a soil wetting agent.  
  • Surface spray on moist soil with 40-100 gallons water per acre followed by incorporation using light tillage.  
  • Surface spray with 20-40 gallons water per acre followed by overhead irrigation. Use enough irrigation water to wet the soil into the root zone.  
  • Direct injection to anticipated root depth using shank or other soil injection equipment. Apply with 30-40 gallons water per acre.  
  Pre-plant applications may be either broadcast over an entire field or concentrated (banded) into planting rows.  
  Apply when soil temperature at 4-inch depth is 60°F or higher. Bioactivity of MeloCon® WG is greatest at soil temperatures between 70° and 90°F.  
  Apply to nematode-infested (non-fumigated) soil up to 14 days before planting or transplanting.  
  Follow up with applications on the field soil at or after planting or transplanting (see third section below).  
| Leafy Vegetables, including Arugula, Head and Leaf Lettuce, Spinach (all types), Celery (all types), Corn salad (Mâche), Cress (all types), Endive, Radicchio and Rhubarb | Application to transplants just before transplanting into the field | Mix 0.5 pound (1 3/4 cup) of MeloCon® WG with 5 gallons of water, and apply as a drench spray to 100 cubic feet of soil or other growth media in transplant flats, pots or other rooting containers.  
  Follow the application with sufficient additional water (such as by drenching or overhead irrigation) to saturate the soil or rooting medium. As needed, follow up with applications at 4- to 6-week intervals at or after transplanting, as described in the section that follows.  
| Crucifer vegetables, including Watermelon, Cantaloupe, Muskmelon (including Honeydew Melon and other melons), Cucumbers (including pickling), Edible Gourds, Pumpkins and Squash (all types) | Application to field soils at or after planting or transplanting | Apply 2 to 4 pounds of MeloCon® WG per acre by one of the following methods:  
  • Drip (trickle) application (see “Instructions for MeloCon® WG Application through Irrigation Systems”).  
  • Banded spray 4” to 6” wide, in-furrow at planting (over or under the seed line).  
  • Apply sufficient water during or immediately after applications to thoroughly wet the soil into the root zone.  
  MeloCon® WG can also be mixed with water and injected directly into the rooting zone using a shank or other injection equipment, preferably on both sides of the plant row.  
  Repeat applications at 4- to 6-week intervals as needed to control plant-parasitic nematode populations during the crop period.  
  To enhance penetration of spores into the root zone, consider mixing MeloCon® WG with a soil wetting agent.  
| Brassica (cole) leafy vegetables, including Broccoli (all types), Brussels Sprouts, Cabbage (all types), Cauliflower, Collards, Kale, and Mustard Greens (all types) | Application to field soils before planting or transplanting | Apply 2 to 4 pounds of MeloCon® WG per acre. Applications can be made by following methods:  
  • Drenching, drip (trickle) or sprinkler application (see “Instructions for MeloCon® WG Application through Irrigation Systems”).  
  • Banded spray 4” to 6” wide, in-furrow at planting (over or under the seed line).  
  • Surface spray on moist soil with 40-100 gallons water per acre followed by incorporation using light tillage.  
  • Surface spray with 20-40 gallons water per acre followed by overhead irrigation. Use enough irrigation water to wet the soil into the root zone.  
  • Direct injection to anticipated root depth using shank or other soil injection equipment. Apply with 30-40 gallons water per acre.  
  Pre-plant applications may be either broadcast over an entire field or concentrated (banded) into planting rows.  
  Apply when soil temperature at 4-inch depth is 60°F or higher. Bioactivity of MeloCon® WG is greatest at soil temperatures between 70° and 90°F.  
  Apply to nematode-infested (non-fumigated) soil up to 14 days before planting or transplanting.  
  Follow up with applications on the field soil at or after planting or transplanting (see third section below).  
| Indoor- or outdoor-grown cut flowers and ornamental bulbs | Application to field soils before planting or transplanting | Apply 2 to 4 pounds of MeloCon® WG per acre. Applications can be made by following methods:  
  • Drenching, drip (trickle) or sprinkler application (see “Instructions for MeloCon® WG Application through Irrigation Systems”).  
  • Banded spray 4” to 6” wide, in-furrow at planting (over or under the seed line).  
  • Surface spray on moist soil with 40-100 gallons water per acre followed by incorporation using light tillage.  
  • Surface spray with 20-40 gallons water per acre followed by overhead irrigation. Use enough irrigation water to wet the soil into the root zone.  
  • Direct injection to anticipated root depth using shank or other soil injection equipment. Apply with 30-40 gallons water per acre.  
  Pre-plant applications may be either broadcast over an entire field or concentrated (banded) into planting rows.  
  Apply when soil temperature at 4-inch depth is 60°F or higher. Bioactivity of MeloCon® WG is greatest at soil temperatures between 70° and 90°F.  
  Apply to nematode-infested (non-fumigated) soil up to 14 days before planting or transplanting.  
  Follow up with applications on the field soil at or after planting or transplanting (see third section below).  
| Root and tuber vegetables, including Beets (except Sugar Beet), Carrot, Cassava, Ginger, Horseradish, Parsnips, Radish, Rutabaga, Taro, Yams and Turnip | Application to field soils before planting or transplanting | Apply 2 to 4 pounds of MeloCon® WG per acre. Applications can be made by following methods:  
  • Drenching, drip (trickle) or sprinkler application (see “Instructions for MeloCon® WG Application through Irrigation Systems”).  
  • Banded spray 4” to 6” wide, in-furrow at planting (over or under the seed line).  
  • Surface spray on moist soil with 40-100 gallons water per acre followed by incorporation using light tillage.  
  • Surface spray with 20-40 gallons water per acre followed by overhead irrigation. Use enough irrigation water to wet the soil into the root zone.  
  • Direct injection to anticipated root depth using shank or other soil injection equipment. Apply with 30-40 gallons water per acre.  
  Pre-plant applications may be either broadcast over an entire field or concentrated (banded) into planting rows.  
  Apply when soil temperature at 4-inch depth is 60°F or higher. Bioactivity of MeloCon® WG is greatest at soil temperatures between 70° and 90°F.  
  Apply to nematode-infested (non-fumigated) soil up to 14 days before planting or transplanting.  
  Follow up with applications on the field soil at or after planting or transplanting (see third section below).  
| Onions, Garlic and other Bulb vegetables | Application to field soils before planting or transplanting | Fill the spray tank to approximately 3/4 (three-fourths) of the desired volume with clean water and begin agitation.  
  • Add the specified amount of MeloCon® WG to the tank (consult application tables below). Do not allow spray mixture to stand overnight or for prolonged periods. Finish filling the tank to the desired volume that provides maximum coverage.  
  • Maintain agitation throughout the mixing and application process.  
  • For best results, prepare the mixture immediately before use.  
  Tank Mixing:  
  • Application efficiency may be enhanced by inclusion of a soil wetting agent to help the spores penetrate soil into the root zone.  
  • Do NOT mix MeloCon® WG with chlorothalonil, mancozeb, triazole or strobilurin fungicides.  
  • Do not mix with strong acids, bases or other caustic materials. Maintain a neutral or slightly acidic pH (6-7) in the spray tank.  
  • Mix MeloCon® WG only with products for which such mixing is permitted by the label for that product. Test the physical compatibility of unfamiliar mixtures by combining small amounts of the products in the intended proportions and mix order before actual use (“jar test”). Observe the most restrictive of the labeling limitations and precautions of all products used in mixtures.  
  • For information on which adjuvants and pesticides can be mixed with MeloCon® WG without harming the beneficial fungus it contains, contact your Technical Sales Representative or the Manufacturer.  
  • For preparation of a tank mix, add the other products first. If the other products are likely to cause foaming, however, add them after filling up the tank to the desired volume of water. Then add MeloCon® WG.

**INSTRUCTIONS FOR MeloCon® WG APPLICATION THROUGH IRRIGATION SYSTEMS**

**Application through Drip (Trickle) or Sprinkler Irrigation:**

Apply MeloCon® WG only through sprinkler, including center pivot, lateral move, end tow, side (wheel) roll, traveler, big gun, solid set, or handmove, and drip (trickle), including micro-irrigation, systems and either before planting or to the planted crop/use site at the appropriate rates indicated in the previous table. If applied in this manner, irrigate with enough water to saturate the soil to the depth of the root zone. Addition of an approved soil wetting agent at the manufacturer’s specified mix rate may enhance penetration of spores to the rooting zone. For information on which adjuvants and pesticides can be mixed with MeloCon® WG without harming the beneficial fungus it contains, contact your Technical Sales Representative or the Manufacturer. Do not apply MeloCon® WG through any irrigation systems other than those specified above. Crop injury or lack of effectiveness can result from non-uniform distribution of treated water. If you have questions about calibration of your irrigation system, you should contact State Extension Service specialists, equipment manufacturers or other experts. Do not connect an irrigation system (including greenhouse systems) used for pesticide application to a public water system unless the pesticide label-prescribed safety devices for public water systems are in place.

**Pesticide Application Using Public Water Systems:**

A person knowledgeable of the pesticide application system and responsible for its operation, or under the supervision of the responsible person, shall shut the system down and make necessary adjustments should the need arise.

1. Public water system means a system for the provision to the public of piped water for human consumption if such system has at least 15 service connections or regularly serves an average of at least 25 individuals daily at least 60 days out of the year.
2. Pesticide application systems connected to public water systems must contain a functional, reduced-pressure zone, back flow preventer (RPZ) or the functional equivalent in the water supply line upstream from the point of pesticide introduction. As an option to the RPZ, the water from the public water system should be discharged into a reservoir tank prior to pesticide introduction. There shall be a complete physical break (air gap) between the flow outlet end of the fill pipe and the top or overflow rim of the reservoir tank of at least twice the inside diameter of the fill pipe.
3. The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.
4. The pesticide injection pipeline must contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.
5. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops, or in cases where there is no water pump, when the water pressure decreases to the point where pesticide distribution is adversely affected.

6. Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump), effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.

7. Do not apply when wind speed favors drift beyond the area intended for treatment.

8. Apply the entire treatment during the first 1/3 of the total irrigation.

9. Mix MeloCon® WG in the supply tank to a concentration appropriate to cover the area to be treated.

10. Agitation is required for mixing and maintaining the suspension of the spores of the active agent in the injection solution. Apply all MeloCon® WG within 24 hours after mixing with water.

**Pesticide Application Using Sprinkler Irrigation:**

1. The system must contain a functional check valve, vacuum relief valve, and low pressure drain appropriately located on the irrigation pipeline to prevent water source contamination from back flow.

2. The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.

3. The pesticide injection pipeline must also contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.

4. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops.

5. The irrigation line or water pump must include a functional pressure switch, which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.

6. Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump), effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.

7. Apply the entire treatment during the first 1/3 of the total irrigation.

8. Mix MeloCon® WG in the supply tank to a concentration appropriate to cover the area to be treated.

9. Agitation is required for mixing and maintaining the suspension of the spores of the active agent in the injection solution. Apply all MeloCon® WG within 24 hours after mixing with water.

**Pesticide Application Using Micro-irrigation:**

1. The system must contain a functional check valve, vacuum relief valve, and low pressure drain appropriately located on the irrigation pipeline to prevent water source contamination from back flow.

2. The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.

3. The pesticide injection pipeline must also contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.

4. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops.

5. The irrigation line or water pump must include a functional pressure switch, which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.

6. Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump), effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.

7. Apply only when the irrigation is soil directed, the heights of the nozzles are below the canopy and irrigation water does not come into contact with aboveground harvestable food commodities.

8. Apply the entire treatment during the first 1/3 of the total irrigation.

9. Mix MeloCon® WG in the supply tank to a concentration appropriate to cover the area to be treated.

10. Agitation is required for mixing and maintaining the suspension of the spores of the active agent in the injection solution. Apply all MeloCon® WG within 24 hours after mixing with water.

**STORAGE AND DISPOSAL**

Do not contaminate water, food or feed by storage and disposal.

**PESTICIDE STORAGE**

Store in a cool, dry place (at 35-40ºF or below), out of direct sunlight, and away from heat sources for up to 6 months. Product is stable for up to 12 months when stored frozen. Keep from overheating.

**PESTICIDE DISPOSAL**

To avoid wastes, use all material in this container by application according to label directions. If wastes cannot be avoided, offer remaining product to a waste disposal facility or pesticide disposal program (often such programs are run by state or local governments or by industry).

**CONTAINER HANDLING**

Nonrefillable container. Do not reuse or refill this container. Completely empty bag into application equipment. Then offer for recycling if available or dispose of empty bag in a sanitary landfill or by incineration. Do not burn, unless allowed by state and local ordinances. If burned, stay out of smoke. If outer box is contaminated, dispose of it in the same manner as required for the bag.

Manufactured for Certis by PROPHYTA Biologischer Pflanzenschutz GmbH, Inselstrasse 12, D-23999 Malchow/Poel, GERMANY

**WARRANTY** - PROPHYTA Biologischer Pflanzenschutz GmbH warrants that this product conforms to the description on this label and is reasonably fit for the purposes set forth on this label, when used according to directions under normal use conditions. Neither this warranty nor any other warranty of merchantability or fitness for a particular purpose, expressed or implied, extends to the use of this product contrary to the label instructions; the buyer assumes the risk of any such uses.
