PRECAUTIONARY STATEMENTS:

HAZARDS TO HUMANS AND DOMESTIC ANIMALS. DANGER: Corrosive. Causes irreversible eye damage or skin burns. Harmful if swallowed. Irritating to nose and throat. Do not get in eyes, on skin, or on clothing. Wear protective eyewear (goggles, face shield), or safety glasses with side shields. Wear protective clothing and rubber gloves when handling this product. Avoid breathing dust and fumes. Wash thoroughly with soap and water after handling. Remove contaminated clothing and wash before reuse.

PHYSICAL AND CHEMICAL HAZARDS. STRONG OXIDIZING AGENT: Do not mix with other chemicals. Mix only with water. Use dry, clean utensils. Do not add this product to any existing water treatment device containing remnants of any other product. Such use may cause a violent reaction leading to a fire or explosion. Contamination with moisture, organic matter, or other chemicals will cause a chemical reaction and generate heat, hazardous gases, possible fire and explosion. In case of contamination or decomposition, do not use reseal containers. If possible, isolate container in open air or well ventilated area. Flood area with large volumes of water.

ENVIRONMENTAL HAZARDS: This pesticide is toxic to fish and aquatic organisms. Do not discharge effluent containing this product into lakes, streams, ponds, ditches, estuaries, oceans or other waters unless in accordance with the requirements of a National Pollution Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge. Do not discharge effluent containing this product to sewer systems without previously notifying the local sewage plant authority. For guidance contact your State Water Board or Regional Office of the EPA.

DIRECTIONS FOR USE: It is a violation of Federal Law to use this product in a manner inconsistent with its labeling. Read entire label and use strictly in accordance with precautionary statements and directions.

RECOMMENDED COOLING WATER SYSTEMS: When used as directed, this product effectively controls algae, bacterial, and fungal slime in commercial and industrial cooling towers: evaporative condensers, influent water systems such as flow-through filters, cooling ponds, canals, and lagoons; heat exchange water systems; industrial water scrubbing systems; brewery pasteurizers; and industrial air washing systems equipped with a mist eliminator.

ONE-PASS RECOMMENDED COOLING WATER SYSTEMS: When used as directed, this product effectively controls algae, bacterial, and fungal slime in once-through fresh and salt water cooling systems, cooling ponds, canals, lagoons. Treat cooling water with this product at the system intake or other critical areas, where mixing is uniform.

EPA REG. NO. 83451-4-43553 Each tablet weighs approximately 20 grams.

Each tablet weighs approximately 20 grams.

EPA EST. # 48190-CA-1

KEEPCOUT OF REACH OF CHILDREN

DANGER

KEEP OUT OF REACH OF CHILDREN

Bromo-Chlor Tablets

For use as a Disinfectant, Sanitizer, Bactericide, Fungicide, Algaecide, and for Control of Microbial Slimes in Industrial Processes and Water Systems such as: Recirculating Cooling Water Systems, Once-Through Cooling Water Systems, Wastewater Treatment Systems, Brewery Pasteurizers, Air Conditioners, Dehumidifiers, Evaporative Coolers, Paper and Paperboard Process Water, and Water Fountains/Reflecting Ponds.

ACTIVE INGREDIENT:
1-Bromo-3-chloro-5,5-dimethylhydantoin 96.0%

OTHER INGREDIENTS: 4.0%

TOTAL: 100.0%

KEEP OUT OF REACH OF CHILDREN

FIRST AID:

IF IN EYES: Hold eye(s) open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if present, after first 5 minutes, then continue rinsing eye. Call a poison control center or doctor for treatment advice.

IF ON SKIN OR CLOTHING: Rinse skin immediately with plenty of water for 15-20 minutes. Call a poison control center or doctor for treatment advice.

IF INHALED: Move person to fresh air. If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably mouth-to-mouth, if possible. Call a poison control center or doctor for treatment advice.

IF SWALLOWED: Have person sip a glass of water if able to swallow. Do not induce vomiting unless told to do so by the poison control center or doctor. Do not give anything by mouth to an unconscious person.

Have the container or label with you when calling a poison control center or doctor, or going for treatment. IN CASE OF TRANSPORT EMERGENCY, CALL 1-800-424-9300 (CHEM-TREC). Note To Physician: Probable mucosal damage may contraindicate the use of gastric lavage.

See side panel for additional precautionary statements.

See side panel for additional precautionary statements.

DIRECTIONS FOR USE CONTINUED:

DOSEAGE RATES: Initial Dose: When the system is noticeably fouled, add 0.2 to 0.6 pounds/1000 gallons (0.32 to 0.72 kilograms/1000 liters) of water contained in the system. Repeat initial dosage until to 1 parts per million (milligrams per liter) bromine residual is established for at least 4 hours.

Subsequent Dose: When microbial control is evident, add 0.1 to 0.3 pounds/1000 gallons (0.12 to 0.36 kilograms/1000 liters) of water contained in the system. Repeat as needed to maintain 1 to 3 parts per million (milligrams per liter) bromine residual for at least 4 hours.

COMMERCIAL AIR CONDITIONER AND DEHUMIDIFIER BASED OR DRY PANS: When used as directed, this product effectively controls microbial slime in areas where water collects.

DOSEAGE RATES: Place this product in the basin or drip pan close to the outlet drain. Use one or more tablets as necessary to maintain the cleanliness of the system. The number of tablets needed will vary with temperature, humidity, and condensate volume.

WASTEWATER TREATMENT SYSTEMS: When used as directed, this product effectively controls algae, bacterial, and fungal slimes and offers rapid disinfection of primary, secondary, and tertiary wastewater treatment systems.

DOSEAGE RATES: Add 0.1 to 0.6 pounds/1000 gallons (0.12 to 0.72 kilograms/1000 liters) of water treated to maintain a 0.5 to 5.0 parts per million (milligrams per liter) bromine residual at the injection point in the disinfection contact chamber. Adjust this product's dosage to achieve disinfection and minimize the halogen concentration at the exit of the contact chamber. Do not use treated water waste to irrigate food crops.

PULP AND PAPER MILLS: When used as directed this product effectively controls algae, bacterial, and fungal slime in pulp and paper mill fresh and sea water influent water systems; cooling water systems; wastewater treatment systems, service water systems, white water systems, and other process water.

This product is intended for use as a disinfectant for the process water used in the manufacture of paper such as the bleaching, purification, and cleaning of 1 pound to 2 pounds of this product to each million ton of fiber when this product is used in the manufacture of paper and paperboard products that contact food. Treat water at critical areas in the system process where mixing of the product with influent will be continuous. The frequency and duration of the treatment will depend upon the severity of the problem. Badly fouled process systems must be cleaned before initial treatment.

PRODUCT APPLICATION: TREATMENT BY SYSTEM VOLUML: When a system is noticeably fouled: add 0.1 to 1.0 pounds of this product to 1000 gallons or 120 parts per million (milligrams per liter) of water in the system. When biological control is evident: add 0.1 to 0.5 parts of this product to 1000 gallons or 120 to 90 parts per million (milligrams per liter) of water in the system.

TREATMENT BY RESIDUAL METHOD: Add sufficient amount of this product to maintain a measured residual up to 5 parts per million (milligrams per liter) as bromine. Once biological control is evident, the use of this product normally can be reduced to something less than 1 part per million as bromine.

To calculate the appropriate level of this product, estimate the paper mill daily production, then add, over a 24 hour period, up to 1000 grams (2.2 pounds) of this product per dry metric ton of dry fiber. Test for bromine to verify that the level of 5 parts per million (milligrams per liter) is not being exceeded.

WATER FOUNTAINS/REFLECTING PONDS: This product when used as directed, is effective as a water feature sanitizer and disinfectant.

DOSEAGE RATES: Ensure all equipment is working properly. Backwash the filter system (if present) following manufacturer's directions. Adjust pH to between 7.2-7.6. When using other products as outlined in directions for this product, always follow directions on those products. A bromine or chlorine residual of 1-2 ppm must first be established in the water. If the residual is established with this product a brominator, use the brominator at the highest feed rate following manufacturer's recommendations. When the bromine residual reaches 1.2 ppm adjust the feed rate accordingly. To maintain bromine residual, adjust the brominator feed rate to assure a constant treatment level of 1.3 ppm. Regular use of a test kit is necessary to maintain a bromine residual in the water.

NOTE: Buyer assumes all responsibility for safety and use not in accordance with directions.
