DIRECTIONS FOR USE:
It is a violation of federal law to use this product in a manner inconsistent with its labeling.

FRUIT AND VEGETABLE WASHING:
Thoroughly clean all fruits and vegetables in a wash tank. Thoroughly mix 5 oz. of this product in 200 gallons of water to make a sanitizing solution of 25 ppm available chlorine. After draining the tank, submerge fruit or vegetables for 2 minutes in a second wash tank containing the recirculating sanitizing solution. Spray rinsed vegetables with the sanitizing solution prior to packaging. Rinse fruit with potable water only prior to packaging.

EGG SHELL SANITIZER:
Thoroughly clean all eggs. Thoroughly mix 2 oz. of this product with 10 gallons of warm water to produce a 200 ppm available chlorine solution. The sanitizer temperature should not exceed 130°F. Spray the warm sanitizer so that the eggs are thoroughly wetted. Allow the eggs to thoroughly dry before casing or breaking. Do not apply a potable water rinse. The solution should not be re-used to sanitize eggs.

DIRECTIONS FOR SANITIZING FOOD PROCESSING OR DAIRY EQUIPMENT:
Clean equipment in a normal manner. Just before using, rinse all surfaces thoroughly with sodium hypochlorite solution containing 200 ppm available chlorine. Maintain contact with disinfectant for a minimum of two (2) minutes. Allow to air dry. Do not rinse with water after treatment with sodium hypochlorite solution. Do not soak overnight. Addition of two (2) fluid ounces of this sodium hypochlorite solution per 10 gallons of water will provide approximately 200 ppm available chlorine by weight. If solution contains less than 50 ppm available chlorine, as determined by a suitable test kit, either discard the solution or add sufficient product or reestablish a 200 ppm residual.

COOLING TOWER/EVAPORATIVE CONDENSER WATER:
CONTINUOUS FEED METHOD – Initial Dose: When system is noticeably fouled, apply 52 to 104 oz. of this product per 100,000 gallons of water in the system to obtain 5 to 10 ppm available chlorine.

DISINFECTION OF DRINKING WATER PUBLIC SYSTEMS:
Mix a ratio of 1 oz. of this product to 100 gallons of water. Begin feeding this solution with a hypochlorinator until a free available chlorine residual of at least 0.2 ppm and no more than 0.6 ppm is attained throughout the distribution system. Check water frequently with a chlorine test kit. Bacteriological sampling must be conducted at a frequency no less than that prescribed by the National Interim Primary Drinking Water Regulations. Contact your local Health Department for further details.

Approximate water dilution table for this product
1 fluid oz. in 1000 gallons water = 1 ppm
1 fluid oz. in 100 gallons water = 10 ppm
1 fluid oz. in 10 gallons water = 100 ppm
1 fluid oz. in 1 gallon water = 1000 ppm

MATERIAL NO. 4538024 LOT NO.

OAKITE LIQUID BACTERICIDE

EPA REG. NO. 9359-02-1020 EPA EST. NO. 9359-NY-02

NET CONTENTS ........................................... 288 liters/55Gallon
ACTIVE INGREDIENT:
SODIUM HYPOCHLORITE .................................. 12.5%
INERT INGREDIENTS:
TOTAL .................................................. 100.0%

KEEP OUT OF REACH OF CHILDREN.
DANGER.
