STERILANT/SPORICIDAL:
Virasept is an effective sterilant according to the AOAC Sporicidal Activity of Disinfectants Method, modified in the presence of 5% organic soil load, on hard non-porous surfaces such as plastics, stainless steel and glass. Virasept can be used on items such as glassware, laboratory instruments, containers, etc. Immerse items to be sterilized in a sufficient volume of Virasept to cover the items and fill all passages requiring treatment. Virasept is effective against Clostridium sporogenes and Bacillus subtilis endospores after a 60 minute exposure time. Surfaces must remain wet for the entire exposure time to achieve effectiveness against spores. Remove the items after 60 minutes and remove the Virasept solution with a clean cloth or clean sponge, rinse with sterile water and allow to air dry, or drain and allow to air dry. For heavily soiled items or areas, a pre-cleaning step is required.

Clostridium difficile
Virasept kills and/or inactivates spores of Clostridium difficile on hard, non-porous surfaces. Apply Virasept with a coarse trigger sprayer, cloth, mop, brush, scrubber, or by soaking to thoroughly wet surface. Virasept is effective against Clostridium difficile endospores after a 10 minute exposure time.
