For use as a postemergence-directed broadleaf herbicide in the following bearing and nonbearing crops: citrus fruit trees, nut trees, and stone fruit trees.

Active Ingredient:
sulfentrazone: R" (8-chloro-4-fluoro-5-(2-methyl-3,6-dioxo-4-(dihydroxymethyl)-2-piperidinyl) N-Methyl-N-(propyl-1-yl)pyridinium chloride).

Other Ingredients:

Total:

Contains 0.7 pound active ingredient sulfentrazone per pound formulated as a water-dispersible granule (WDG).

EPA Reg. No. 7995-718

KEEP OUT OF REACH OF CHILDREN

CAUTION/PRECAUCION

See label for complete First Aid, Procedural Statements, Directions For Use, Conditions of Sale and Warranty, and state-specific crop and/or use site restrictions.

In case of an emergency endangering life or property involving this product, call day or night 1-800-HELP (4357).

Net Contents: 10 ounces

Product of U.S.A.

BASF Corporation
20 David Drive, Research Triangle Park, NC 27709

810-47624

NWA 2013-05-321-0102
FIRST AID

If on skin or clothing
• Take off contaminated clothing.
• Rinse skin immediately with plenty of water for 15 to 20 minutes.
• Call a poison control center or doctor for treatment advice.

If swallowed
• Call a poison control center or doctor immediately for treatment advice.
• DO NOT induce vomiting; unless told to do so by a poison control center or doctor.
• DO NOT give any liquid to the person.
• DO NOT give anything by mouth to an unconscious person.

If in eyes
• Hold eyes open and rinse slowly and gently with water for 15 to 20 minutes.
• Remove contact lenses, if present, after first 5 minutes; then continue rinsing eyes.
• Call a poison control center or doctor for treatment advice.

If inhaled
• Move person to fresh air.
• If person is not breathing, call 911 or an ambulance; then give artificial respiration, preferably by mouth to mouth, if possible.
• Call a poison control center or doctor for further treatment advice.

HOTLINE NUMBER
Have the product container or label with you when calling a poison control center or doctor or going for treatment.
You may also contact BASF Corporation for emergency medical Treaterers information at 1-800-456-HELP (4357).

Precautionary Statements

Hazards to Humans and Domestic Animals
CAUTION. Harmful if absorbed through skin. Harmful if swallowed. Causes moderate eye irritation. Avoid contact with eyes, eyes or clothing.

Personal Protective Equipment (PPE)
Some materials that are chemically resistant to this product are listed below. For more options, refer to Category A on an EPA chemical-resistance category selection chart.

Applicators and other handlers must wear:
• Protective eyewear such as face shield, goggles, or safety glasses
• Long-sleeved shirt and long pants
• Shoes plus socks
• Chemical-resistant gloves (such as natural rubber, selection Category A)

Follow the manufacturer’s instructions for cleaning and maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry. Discard clothing and other absorbent materials that have been drenched or heavily contaminated with this product’s concentrate. DO NOT reuse them.
Engineering Controls Statement

When handlers use closed systems or enclosed cab in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides (40 CFR 170.340)(4-6), the handler PPE requirements may be reduced or modified as specified in the WPS.

**IMPORTANT:** When reduced PPE is worn because a closed system is being used, handlers must be provided all PPE specified above for applicators and other handlers and have such PPE immediately available for use in an emergency, such as a spill or equipment breakdown.

### USER SAFETY RECOMMENDATIONS

**Users should:**
- Wash hands before eating, drinking, chewing gum, using tobacco, or using the toilet.
- Remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
- Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

### Environmental Hazards

For terrestrial uses, **DO NOT** apply directly to water, areas where surface water is present, or intertidal areas below the mean high water mark. **DO NOT** contaminate water when disposing of equipment washwater or rinsates.

**Groundwater Advisory:** Sulfuric acid has properties and characteristics associated with chemicals designed in groundwater. This chemical may leak into groundwater if used in areas where soils are permeable, particularly where the water table is shallow.

**Surface Water Advisory:** Sulfuric acid may impact surface water due to runoff of rainwater. This is especially true for poorly draining sites and soils with shallow groundwater. This product is classified as having high potential for reaching surface water via runoff for several weeks after application. A low, well-managed buffer strip between areas to which this product is applied and surface water features such as ponds, streams, and springs will reduce the potential loading of this chemical from runoff water and sediment. Runoff of this product will be reduced by avoiding application when rainfall is forecast to occur within 48 hours.

Endangered Species Protection Requirements

This product may have effects on federally listed threatened or endangered plant species or their critical habitat. When using this product, you must follow the measures contained in the Endangered Species Protection Bulletin for the county or parish in which you are applying the pesticide. To determine whether your county or parish has a Bulletin, and to obtain that Bulletin, consult http://www.ecos.gov/pols/ or call 1-800-447-3963 no more than 6 months before using this product. Applicators must use Bulletin that are in effect in the month in which the pesticide will be applied, New Bulletins will generally be available from the above sources 6 months prior to their effective dates.

### Directions For Use

It is a violation of federal law to use this product in a manner inconsistent with its labeling. This labeling must be in the possession of the user at time of herbicide application.

**DO NOT** apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your state or tribe, consult the agency responsible for pesticide regulation.

Observe all precautions and limitations in this label and the labels of products used in combination with Treflan herbicide. The use of Treflan not consistent with this label can result in injury to crops, animals or persons. Keep containers closed to avoid spills and contamination.

Untiued otherwise directed in supplemental labeling, all applicable directions, restrictions, precautions and Conditions of Sale and Warranty are to be followed.

BASF Corporation does not recommend or authorize the use of this product in manufacturing, processing or preparing custom-blended with other products for application to crops.
AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This standard contains requirements for the protection of agricultural workers on farms, nurseries and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry intervals. The requirements in this box only apply to users of this product that are covered by the Worker Protection Standard.

DO NOT enter or allow worker entry into treated areas during the restricted-entry interval (REI) of 12 hours.

EXCEPTION: If the product is soil-injected or soil incorporated, the Worker Protection Standard, under certain circumstances, allows workers to enter the treated area if there will be no contact with anything that has been treated.

PPE required for entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water, is:
- Coveralls
- Chemical-resistant gloves such as natural rubber ≥ 14 mils
- Shoes plus socks
- Protective eyewear

STORAGE AND DISPOSAL

DO NOT contaminate water, food, or feed by storage or disposal. Open dumping is prohibited.

Pesticide Storage

Store in original container only, in cool, dry, and well-ventilated area, separately from fertilizer, feed, or foodstuffs and away from other pesticides. DO NOT store this product under wet conditions. Avoid cross-contamination with other pesticides.

Pesticide Disposal

Wastes resulting from this product may be disposed of on-site or at an approved waste disposal facility. Improper disposal of excess pesticide, spray mix, or residue is a violation of federal law. If these wastes cannot be disposed of according to label instructions, contact the state agency responsible for pesticide regulation or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

Container Handling

Nonrefillable Container: DO NOT reuse or refill this container. Triple rinse or pressure rinse container (or equivalent) promptly after emptying; then offer for recycling, if available, or reconditioning, if appropriate, or puncture and dispose of in a sanitary landfill, or by incineration, or by other procedures approved by state and local authorities.

Triple rinse containers small enough to shake (capacity ≤ 50 pounds) as follows: Empty the remaining contents into application equipment or a mix tank. Fill the container 1/4 full with water and recap. Shake for 10 seconds. Pour into application equipment or a mix tank, or store in aseptic for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times.

Pressure rinse as follows: Empty the remaining contents into application equipment or mix tank. Hold container upside down over application equipment or mix tank, or collect residue for later use or disposal. Insert pressure rinsing nozzle in the side of the container and rinse at about 40 PSI for at least 30 seconds. Drain for 10 seconds after the flow begins to drip.
In Case of Emergency

In case of large scale spillage regarding this product, call:
- CHEMTREC 1-800-424-9300
- BASF Corporation 1-800-858-HELP (4357)

In case of medical emergency regarding this product, call:
- Your local doctor for immediate treatment
- Your local poison control center (hospital)
- BASF Corporation 1-800-858-HELP (4357)

Steps to be taken in case material is released or spilled:
- Do not contaminate waterways
- Wash affected skin areas with soap and water
- Keep the spill out of all waters and open bodies of water

Product Information

Treexis™ herbicide provides contact burndown broadleaf weed control. Refer to Table 1 for weeds controlled. Treexis does not control grass weeds and must be used sequentially or tank mixed with a grass herbicide for a complete weed control program. Refer to Crop-specific Information section for recommendations on herbicide tank mixes or sequential programs.

1 To achieve control of these weeds, the tank mix of Triexis and glyphosate or glufosinate is required. Refer to glyphosate or glufosinate labels for specific use rates.

Mode of Action

Triexis is a potent inhibitor of protoporphyrinogen-oxidase belonging to herbicide mode of action Group 14 (WSSA/Group 8 JMAO). Triexis is rapidly absorbed by roots and foliage. Following inhibition of protoporphyrinogen-oxidase, plant death is the result of membrane damage. Under active growing conditions, susceptible emerged weeds usually develop chlorosis and necrotic injury symptoms within hours and die within a few days.

Resistance Management

While weed resistance to protoporphyrinogen-oxidase inhibiting herbicides is relatively infrequent, populations of resistant biotypes are known to exist. Resistance management practices include:

1. Following labeled application rate and weed growth stage recommendations
2. Avoiding repeated applications of herbicides with the same mode of action
3. Utilizing tank mixes and sequential applications with other effective herbicides possessing different modes of action
4. Using crop rotation so that crop competition, habitat or herbicides with alternative modes of action can be used to control weed escapes

Crop Tolerance

Citrus fruit trees, nut trees, and some full trees are tolerant to Triexis applied according to label directions as a postemergence-directed treatment and under normal environmental conditions. Crop injury may occur under stressful growing conditions (e.g. seeding disease, extreme hot or cold weather, excessive moisture, high soil pH, high soil salt concentration, or drought)

Severe crop injury will result if Triexis is applied postemergence (over the top) to any tree or vine crop.

Application Instructions

Triexis must be applied as a postemergence-directed spray application either as a uniform broadcast, banded, or spot application to emerged broadleaf weeds.

Application Methods and Equipment

Triexis can ONLY be applied using ground equipment. Good spray coverage is important for optimum broadleaf weed control and can be improved with proper agitation, nozzle, and spray volume selection.

Use and configure application equipment to provide an adequate spray volume, an accurate and uniform distribution of spray droplets over the treated area, and to avoid spray drift to non-target areas. Equipment should be adjusted to maintain a continuous spray during spraying with good mechanical or bypass agitation. Avoid operating that will increase rates above the use rates specified in the label. DO NOT apply broadcast or band using high pressure hand wands.

Ground Application Requirements

Water Volume: As a water dispersible granule formulation, Triexis must ONLY be applied using water as the spray carrier. Use 10 or more gallons of water per acre. Increased efficacy has been observed at water volumes of 20 to 40 gallons per acre. Though sprayer coverage is required for control of emerged broadleaf weeds, high populations and/or variations in size can prevent adequate spray coverage. Controlling girdled limbs in the spring (e.g. horsetail/marigold) will also require through spray coverage. Use higher spray volumes (e.g. 15 to 20 gallons of water per acre) in these situations to increase spray coverage and optimize burndown activity.

7
The following measures must be followed to reduce the potential of spray drift to non-target areas from ground applications:

1. Apply this product using nozzles which deliver medium-to-course spray droplets as defined by ASAE standard S-572 and as shown in nozzle manufacturer's catalog. Fine fan nozzles are recommended for ground applications. Nozzles that deliver coarse spray droplets may be used to reduce spray drift provided spray volume per acre (GPA) is increased to maintain coverage of target [e.g., weeds]. DO NOT use nozzles that produce fine (e.g., cone) spray droplets.

2. Apply this product only when the potential for drift to adjacent non-target areas is minimal (e.g., when the wind is 10 MPH or less and is blowing away from sensitive areas), DO NOT apply during periods of temperature inversions or stable atmospheric conditions.

3. Avoid potential adverse effects to non-target areas by maintaining a 33 foot buffer (50-foot buffer in California) between the application area and the closest downwind edge of sensitive terrestrial habitats such as grasslands, forested areas, shelter belts, woodlots, hogswallow, riparian areas, shrub lands, and crop lands.

Cleaning Spray Equipment

Before applying Treviso® herbicide, all equipment must be thoroughly cleaned. All spray equipment, hoses, and nozzles must be cleaned according to the manufacturer's directions for the last product used before the equipment is used to apply Treviso.

Spray equipment used to apply Treviso should not be used to apply other materials to any crop unless the proper cleanout procedures are followed. Clear application equipment thoroughly by using a strong detergent or commercial sprayer cleaner according to the manufacturer's directions, followed by triple-rinse the equipment after applying this product.

Spray Drift Management

It is the responsibility of the applicator to avoid spray drift at the application site, especially onto non-target areas. The interaction of many equipment-related and weather-related factors determines the potential for spray drift. The applicator and the grower are responsible for considering all these factors when making decisions.

The applicator should be familiar with and take into account the information covered in the following spray drift reduction advisory information.

Controlling Droplet Size. The most effective way to reduce drift potential is to apply the largest droplets that provide sufficient coverage and control.

Volume. Use high flow rate nozzles to apply the highest practical spray volume. Nozzles with higher rated flows produce larger droplets.

Pressure. DO NOT exceed the nozzle manufacturer's recommended pressure. For many nozzle types, lower pressure produces larger droplets. When higher flow rates are needed, use higher flow rate nozzles instead of increasing pressure.

Number of Nozzles. Use the minimum number of nozzles that provide uniform coverage.

Nozzle Type. Use a nozzle type that is designed for the intended application. Most nozzle types, narrower spray angles produce larger droplets.

Swath Adjustment. When applications are made with a crosswind, the swath will be displaced downwind. Therefore, on the upwind and downwind edges of the field, the applicator must compensate for this displacement by adjusting the path of the application equipment (e.g., ground) upwind. Swath adjustment distance should increase with increasing drift potential (higher wind, smaller droplets, etc.).

Wind. Drift potential is lowest between wind speeds of 3 to 10 mph. However, many factors, including droplet size and equipment type, determine drift potential at any given speed. If applying at wind speeds less than 3 mph, the applicator must determine if:

1. Conditions of temperature inversion exist, or
2. Stabilizing atmospheric conditions exist at or below nozzle height.

NOTE: Local terrain can influence wind patterns. Every applicator should be familiar with local wind patterns and how they affect spray drift.

Wind Erosion. Avoid treating powdery, dry or light sandy soils when conditions are favorable for wind erosion. Under these conditions, the soil surface should first be tilled by raking or irrigation.
Additives

For optimum burndown activity with Treevix™ herbicide, an adjuvant system must be used that includes the following:

<table>
<thead>
<tr>
<th>Adjuvant</th>
<th>Rate</th>
</tr>
</thead>
<tbody>
<tr>
<td>Methylated seed oil (MSS/MS)</td>
<td>1 gal/100 gal (1% v/v)</td>
</tr>
<tr>
<td>PLUS</td>
<td></td>
</tr>
<tr>
<td>Ammonium sulfate (AMS)</td>
<td>8.5 to 17 lbs/100 gal (1% to 2% w/v)</td>
</tr>
<tr>
<td>or Ammonium nitrate (UAN)</td>
<td>1.25 to 2.5 gal/100 gal (1.25% to 2.5% w/v)</td>
</tr>
</tbody>
</table>

1 MSS-based adjuvant MUST contain at least 80% methylated seed oil. Poor performance may occur with adjuvants containing less than 60% methylated seed oil.
2 DO NOT use less than 1 pint of MSS with low volume (< 12.5 gallons per acre) aerial or ground applications.
3 The use of AMS fertilizer is highly recommended when mixing Treevix with glyphosate-based herbicides.
4 DO NOT use a nonionic surfactant (NIS) as a substitute for MSS, or poor performance on broadleaf weeds will occur.
5 When an adjuvant is to be used with this product, BASF recommends the use of a Chemical Producers and Distributors Association (CPDA) certified adjuvant.

Tank Mixing Information

Treevix may be tank mixed with 1 or more registered herbicide products according to the specific tank mixing instructions in this label and respective product labels. Follow and follow the applicable restrictions and limitations and directions for use on all product labels involved in tank mixing. The most restrictive labeling applies to tank mixes. Always follow the most restrictive label use directions. Refer to the Crop-specific Information section for details.

Tank mixtures with contact herbicides (e.g., confenlozone, penxylo) may reduce the burndown activity of Treevix.

Compatibility Test for Mix Components

Before mixing components, always perform a compatibility jar test.

1. For 20 gallons per acre spray volume, use 3-3 cups (850 ml) of water. For other spray volumes, adjust rates accordingly.
2. Only use water from the intended source at the intended temperature.
3. Add components in the sequence indicated in the following mixing order instructions using 2 teaspoons for each pound of 1 teaspoon for each pint of labeled rate per acre.
4. Always cap the jar and invert 10 cycles between component additions.
5. Evaluate the solution for uniformity and stability. The spray solution should not have free oil on the surface, or free particles that precipitate to the bottom, or thick (clayey) texture. If the spray solution is not compatible, repeat the compatibility test with the addition of a suitable compatibility agent. If the solution is then compatible, use the compatibility agent as directed on its label. If the solution is still incompatible, DO NOT mix the ingredients in the same tank.

Mixing Order

1. Water - Fill tank 1/2 to 3/4 full of clean water and start agitation.
2. Agitation - Maintain agitation throughout mixing.
3. Inducer - If an inducer is used, dose it thoroughly after each component has been added.
4. Products in PVA bags - Place any product contained in water-soluble PVA bags into the mixing tank. Wait until all water-soluble PVA bags have fully dissolved and the product is evenly mixed in the spray tank before continuing.
5. Water-soluble additives (including dry and liquid fertilizers such as ammonium sulfate or urea ammonium nitrate)
6. Water-dispersible products (such as liquid fertilizers, wettable powders, suspension concentrates or suspo-emulsions)
7. Water-soluble products
8. Emulsifiable concentrate (including methylated seed oil adjuvants)
9. Remaining quantity of water

Maintain agitation throughout application until spraying is completed. If the spray mixture is allowed to settle for any period of time, thorough agitation is essential to resuspend the mixture before spraying is resumed. Continue agitation while spraying.
Use Precautions

Maximum seasonal use rate: Refer to Crop-specific Information sections for maximum cropping season application rate per crop. A cropping season is defined as the period following harvest of the preceding crop through the harvest of the planned or current crop.

Rainfastness: Tresvis herbicide is rainfast 1 hour after application. Burndown activity may be reduced if rain or irrigation occurs within 1 hour of application.

DO NOT apply Tresvis by air.

DO NOT contaminate irrigation ditch with water used for domestic purposes.

DO NOT apply Tresvis through any type of irrigation system (e.g., channigation).

Tresvis is not for sale, distribution, or use in Nassau and Suffolk counties in New York State.

Crop Rotation and Emergency Replanting Intervals

If any labeled crop treated with Tresvis is lost to adverse weather or for other reasons, the area treated may be replanted to citrus, fruit trees 1 month after treatment and to nut trees, pine, or other crops 3 months after treatment. Corn and small grains may be planted immediately after crop removal. Wait 9 months before planting any other crops. Be sure to determine the rotational crop interval for tank mix products and follow the most restrictive interval of all products applied.

Crop-specific Information

This section provides use directions for Tresvis in specific crops. Be sure to read product information, mixing, application, weeds controlled, and adjacent instructions in preceding sections of the label. Read and follow tank mix product labels for restrictions, precautions, instructions, and rotational crop restrictions.

Though crop coverage is required for control of emerged broadleaf weeds, high populations and/ or variations in size can prevent adequate spray coverage. Controlling all germinated weeds in the spring (e.g., homeschool/meristematic) will also require thorough spray coverage. Use higher spray volumes (e.g., 15 to 20 gallons of water per acre) in these situations to increase terminal coverage and optimize burndown activity.

Bearing and Nonboring Fruit and Nut Trees

Tresvis may be applied in the following individual bearing or non-bearing crops within the fruit tree and tree nut crop groupings:

<table>
<thead>
<tr>
<th>Citrus Fruits</th>
<th>Pome Fruits</th>
<th>Tree Nuts</th>
</tr>
</thead>
<tbody>
<tr>
<td>Citrus</td>
<td>Mandarin (pummelo)</td>
<td>Pear (pique)</td>
</tr>
<tr>
<td>Orange (sweet)</td>
<td>Pomegranate</td>
<td>Almond</td>
</tr>
<tr>
<td>Grapefruit</td>
<td></td>
<td>Peanut</td>
</tr>
<tr>
<td>Lemon</td>
<td>Tangerine</td>
<td></td>
</tr>
</tbody>
</table>
**Trevix™ herbicide** may be applied either in a single application or sequentially up to 3 times per year. Sequential applications must be separated by at least 21 days.

**Additional Dormant Period Application in Tree Nuts and Pome Fruit Trees.** **Trevix** may be applied sequentially up to four (4) times per year only if one or two of the applications occur during the dormant period of postharvest through winter dormancy. Apply **Trevix** at 1.0 oz/A per application during the period of postharvest through winter dormancy. **Trevix** applications may be made in the spring just before the buds swell, or in the fall when trees are in bud swell to crop harvest. Sequential applications may be separated by at least 21 days regardless of the time of year. **DO NOT** apply **Trevix** more than four (4) times per croppi ng season (i.e., if two (2) applications are made in the postharvest to winter dormancy period, then a maximum of only two (2) applications can be made in-season).

**Additional Dormant Period Application in Citrus Trees.** **Trevix** may be applied sequentially up to four (4) times per year only if one or two of the applications occur during the period of postharvest to the beginning of bloom. Apply **Trevix** at 1.0 oz/A per application during the period of postharvest until trees begin to bloom. **Trevix** applications may only usually be applied after other treatments have been initiated. **Trevix** applications are permitted while trees are in the fruited stage until crop harvested. Sequential applications must be separated by at least 31 days regardless of the time of year. **DO NOT** apply **Trevix** more than four (4) times per cropping season (i.e., if two (2) applications are made in the postharvest period, then a maximum of only two (2) applications can be made during flowering stage until crop harvested).

**Spot Treatments.** Consult the chart following for the amount of **Trevix** for making various gallons of spray mix to be used for spot treatments applied to actively growing broadleaf weeds and vines referenced in Table 1. Spray thoroughly to wet the weed foliage but not to point of runoff. To maximize performance, refer to the **Additives** section for the recommended adjuvant and rate to be added to the spray mix. Each spray mix is equivalent to applying **Trevix** at a rate of 1.0 oz/A in a spray volume of 100 gallons per acre. Applications of a spot spray mix should not be made to an equivalent area less than what is shown in the chart or exceed the equivalent broadcast rate of 1.0 oz/A. Spot treatments may be applied via an ATV-mounted jettison-valved-handled sprayer or tractor-mounted sprayer equipped for low pressure hand-held applications. **DO NOT** apply spot treatments using high pressure hand wands.

**Crop-specific Restrictions and Limitations**
- **DO NOT** apply more than 1.0 oz/A of **Trevix** in a single application.
- **DO NOT** apply more than a maximum cumulative amount of 3.0 oz/A of **Trevix** per cropping season or more than a maximum cumulative amount of 4.0 oz/A per cropping season when using the **Additional Dormant Period Applications**. **DO NOT** apply more than a maximum cumulative amount of 4.0 oz/A of **Trevix** on an annual basis.
- **Trevix** may be applied any time up to or on the day of tree fruit harvest.
- Wait at least 7 days after application of **Trevix** before harvesting tree nuts.
- **DO NOT** use in tree nurseries.

**Tank Mixtures**
Broad-spectrum postemergence control of additional annual and perennial weeds will usually require a tank mix with a herbicide such as glyphosate. **Trevix** may be tank mixed or applied sequentially with one or more of, but not limited to, the following herbicide products for additional broadleaf or residual weed control:
- **Postemerge Herbicide/Postemerge Plus® Herbicide**
- **Preemerge Herbicide**
- **Rely® 200 Herbicide**
- **Roundup® Herbicide**
- **Cyclotron® Herbicide**
## Conditions of Sale and Warranty

The Directions For Use of this product reflect the opinion of experts based on field use and tests. The directions are believed to be reliable and must be followed carefully. However, it is impossible to eliminate all risks inherently associated with the use of this product. Crop injury, ineffectiveness or other unintended consequences may result because of such factors as weather conditions, presence of other materials, or use of the product in a manner inconsistent with its labeling, all of which are beyond the control of BASF CORPORATION ("BASF") or the Seller. To the extent consistent with applicable law, all such risks shall be assumed by the Buyer.

BASF warrants that this product conforms to the chemical description on the label and is reasonably fit for the purposes referred to in the Directions For Use, subject to the inherent risks, referred to above.

TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, BASF MAKES NO OTHER EXPRESS OR IMPLIED WARRANTY OF FITNESS OR MERCHANTABILITY OR ANY OTHER EXPRESS OR IMPLIED WARRANTY.

TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, BUYER'S EXCLUSIVE REMEDY AND BASF'S EXCLUSIVE LIABILITY, WHETHER IN CONTRACT, TORT, NEGLIGENCE, STRICT LIABILITY, OR OTHERWISE, SHALL BE LIMITED TO REPAIR OR REPLACEMENT OR THE PURCHASE PRICE OF THE PRODUCT.

TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, BASF AND THE SELLER DISCLAIM ANY LIABILITY FOR CONSEQUENTIAL, EXEMPLARY, SPECIAL OR INDIRECT DAMAGES RESULTING FROM THE USE OR HANDLING OF THIS PRODUCT.

BASF and the Seller offer this product, and the Buyer and User accept it, subject to the foregoing Conditions of Sale and Warranty which may be varied only by agreement in writing signed by a duly authorized representative of BASF.
For use as a postemergence-directed broadleaf herbicide in the following bearing and nonbearing crops: citrus fruit trees, naval oranges, and some fruit trees.

Active Ingredient:
- 2-methyl-4-isoxazole (3-(3-methyl-1-oxazolin-2-yl) propanoic acid) 70.0%
- Other Ingredients: 30.0%
- Total: 100.0%

Contains 0.1 pounds active ingredient per pound formulated as a water-dispersible granule (WG).

EPA Reg. No. 7000-729
EPA Est. No. 901-PR-002

KEEP OUT OF REACH OF CHILDREN

CAUTION/RECAUTION

For use by experienced operators, training is not required.

See attached booklet for complete Final Rule, Precautionary Statements, Directions For Use, Conditions of Sale and Warranty, and other specific and crucial use instructions.

In case of an emergency endangering life or property involving this product, call day or night 1-800-822-HELP (4357).

Net Contents: 10 ounces

BASF Corporation
