Cueva® Fungicide Concentrate

Flowable Liquid Copper Fungicide

Listed by the Organic Materials Review Institute (OMRI) for use in organic production.

ACTIVE INGREDIENT:
Copper Octanoate (Copper Soap) ................................................................. 10.0%
CAS Reg. No. 20543-04-8
OTHER INGREDIENTS ................................................................. 90.0%
TOTAL ................................................................. 100.0%
metallic copper equivalent 1.8%
one gallon contains 0.16 lbs. metallic copper equivalent

KEEP OUT OF REACH OF CHILDREN

CAUTION

See Inside Booklet for Additional Precautionary Statements, Directions for Use, and Storage and Disposal Instructions

FIRST AID

IF IN EYES
• Hold eye open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.
• Call a poison control center or doctor for treatment advice.

IF ON SKIN OR CLOTHING
• Take off contaminated clothing.
• Rinse skin immediately with plenty of water for 15-20 minutes.
• Call a poison control center or doctor for treatment advice.

IF SWALLOWED
• Call a poison control center or doctor immediately for treatment advice.
• Have person sip a glass of water if able to swallow.
• Do not induce vomiting unless told to by a poison control center or doctor.
• Do not give anything to an unconscious person.

Have the product container or label with you when calling a poison control center or doctor or going for treatment. For emergency information concerning this product, call the toll free Hot Line Number 1-800-255-3924.

User Safety Recommendations

Users should:
• Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet.
• Remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
• Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

Environmental Hazards

This product is toxic to fish and aquatic organisms and may contaminate water through runoff. Do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. Do not contaminate water by disposal of equipment washwaters or rinsate. This product may contaminate water through runoff. Poorly draining soils with shallow water tables are more prone to produce runoff that contains this product. Drift and runoff may be hazardous to aquatic organisms in water adjacent to treated areas.

STORAGE AND DISPOSAL

Do not contaminate water, food or feed by storage or disposal.

Pesticide Storage: Store in a secure place, away from open fire or flame. Keep container closed and resale after use. Product may be damaged by freezing. Do not store product below 4°C. If spilled, use absorbent material and dispose of in an approved manner.

Pesticide Disposal: Waste resulting from the use of this product may be disposed of on site or at an approved waste disposal facility.

Container Handling: Nonrefillable container. Do not reuse or refill this container.

CAUTION: Harmful if swallowed or absorbed through skin. Avoid contact with skin, eyes or clothing. Wash hands thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco or using the toilet. Remove and wash contaminated clothing before reuse.

Personal Protective Equipment (PPE): Some materials that are chemical-resistant to this product are listed below. If you want more options, follow the instructions for category A on an EPA chemical resistance category selection sheet. Mixers/loaders and other handlers must wear the following: long-sleeved shirts, long pants, chemical resistant gloves made of any waterproof material, such as polyvinyl chloride, nitrile rubber or butyl rubber, and shoes plus socks. Follow manufacturer’s instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry. Discard clothing and other absorbent material that have been drenched or heavily contaminated with the product’s concentrate. Do not reuse them.

Storage and Disposal Instructions

See Inside Booklet for Additional Precautionary Statements, Directions for Use, and Storage and Disposal Instructions

PRECAUTIONARY STATEMENTS

Hazards to Humans and Domestic Animals

CAUTION: Harmful if swallowed or absorbed through skin. Avoid contact with skin, eyes or clothing. Wash hands thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco or using the toilet. Remove and wash contaminated clothing before reuse.

Personal Protective Equipment (PPE): Some materials that are chemical-resistant to this product are listed below. If you want more options, follow the instructions for category A on an EPA chemical resistance category selection sheet. Mixers/loaders and other handlers must wear the following: long-sleeved shirts, long pants, chemical resistant gloves made of any waterproof material, such as polyvinyl chloride, nitrile rubber or butyl rubber, and shoes plus socks. Follow manufacturer’s instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry. Discard clothing and other absorbent material that have been drenched or heavily contaminated with the product’s concentrate. Do not reuse them.

Environmental Hazards

This product is toxic to fish and aquatic organisms and may contaminate water through runoff. Do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. Do not contaminate water by disposal of equipment washwaters or rinsate. This product may contaminate water through runoff. Poorly draining soils with shallow water tables are more prone to produce runoff that contains this product. Drift and runoff may be hazardous to aquatic organisms in water adjacent to treated areas.

STORAGE AND DISPOSAL

Do not contaminate water, food or feed by storage or disposal.

Pesticide Storage: Store in a secure place, away from open fire or flame. Keep container closed and resale after use. Product may be damaged by freezing. Do not store product below 4°C. If spilled, use absorbent material and dispose of in an approved manner.

Pesticide Disposal: Waste resulting from the use of this product may be disposed of on site or at an approved waste disposal facility.

Container Handling: Nonrefillable container. Do not reuse or refill this container.

Hazards to Humans and Domestic Animals

CAUTION: Harmful if swallowed or absorbed through skin. Avoid contact with skin, eyes or clothing. Wash hands thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco or using the toilet. Remove and wash contaminated clothing before reuse.

Personal Protective Equipment (PPE): Some materials that are chemical-resistant to this product are listed below. If you want more options, follow the instructions for category A on an EPA chemical resistance category selection sheet. Mixers/loaders and other handlers must wear the following: long-sleeved shirts, long pants, chemical resistant gloves made of any waterproof material, such as polyvinyl chloride, nitrile rubber or butyl rubber, and shoes plus socks. Follow manufacturer’s instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry. Discard clothing and other absorbent material that have been drenched or heavily contaminated with the product’s concentrate. Do not reuse them.

Environmental Hazards

This product is toxic to fish and aquatic organisms and may contaminate water through runoff. Do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. Do not contaminate water by disposal of equipment washwaters or rinsate. This product may contaminate water through runoff. Poorly draining soils with shallow water tables are more prone to produce runoff that contains this product. Drift and runoff may be hazardous to aquatic organisms in water adjacent to treated areas.

STORAGE AND DISPOSAL

Do not contaminate water, food or feed by storage or disposal.

Pesticide Storage: Store in a secure place, away from open fire or flame. Keep container closed and resale after use. Product may be damaged by freezing. Do not store product below 4°C. If spilled, use absorbent material and dispose of in an approved manner.

Pesticide Disposal: Waste resulting from the use of this product may be disposed of on site or at an approved waste disposal facility.

Environmental Hazards

This product is toxic to fish and aquatic organisms and may contaminate water through runoff. Do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. Do not contaminate water by disposal of equipment washwaters or rinsate. This product may contaminate water through runoff. Poorly draining soils with shallow water tables are more prone to produce runoff that contains this product. Drift and runoff may be hazardous to aquatic organisms in water adjacent to treated areas.
DIRECTIONS FOR USE

It is a violation of Federal Law to use this product in a manner inconsistent with
its labeling.

Do not apply this product in a manner that will contact workers or other persons,
ether directly or through drift. Only protected workers may be in the area
during application. For any requirements specific to your State or Tribe, consult
the agency responsible for pesticide regulation.

Read and follow all applicable directions and precautions on this label before
using.

Agricultural Use Requirements

Use this product in accordance with its labeling and with the Worker
Protection Standard. 40 CFR part 170. This standard contains requirements for
the protection of agricultural workers on farms, forests, nurseries, and green-
houses, and handlers of agricultural pesticides. It contains requirements for
training, decontamination, notification, and emergency assistance. It also con-
tains specific instructions and exceptions pertaining to the statements on this
label about personal protective equipment (PPE), restricted-entry interval, and
notification to workers. The requirements in this box only apply to uses of this
product that are covered by the Worker Protection Standard (WPS).

Entry-Restrictions: Do not enter or allow worker entry into treated areas dur-
ing the restricted-entry interval of 4 hours.

PPE required for entry-early to treated areas that is permitted under the Work-
er Protection Standard and that involves contact with anything that has been
treated, such as the leaves, soil, or water, wear: long-sleeved shirt, long pants,
shoes, socks and chemical-resistant gloves made of any waterproof material,
such as polyvinyl chloride, nitrile rubber, or butyl rubber.

Non-Agricultural Use Requirements

The requirements in this box apply to uses of this product that are NOT within
the scope of the Worker Protection Standard for agricultural pesticides (40
CFR Part 170). The WPS applies when this product is used to produce agri-
cultural plants on farms, forests, nurseries, or greenhouses.

Do not enter or allow others to enter until sprays have dried.

GENERAL INFORMATION

• CUEVA® FUNGICIDE CONCENTRATE can be applied up to the day of harvest
• Fixed copper is one of the oldest fungicides, used to control a wide range of list-
a - Use as a dormant spray for peach leaf curl.
• A wide range of bacteria* and fungi attack plants, however, they generally only
cause a few types of diseases. When using CUEVA® FUNGICIDE CONCENTRATE,
it is important to have CUEVA® FUNGICIDE CONCENTRATE on the leaf or fruit
before the pathogen is able to cause an infection.
• For use on field crops, nuts and fruit, including citrus and berries.
• Non-public health bacteria

DIRECTIONS FOR USE

Shake well before use. Most conventional liquid pesticide plant sprayers can be
used to apply CUEVA® FUNGICIDE CONCENTRATE to plants. A spreader may
be used to improve the spreading of CUEVA® FUNGICIDE CONCENTRATE on
hard to wet plants.

Tank Mixing CUEVA® FUNGICIDE CONCENTRATE with Other Pesticides

Read and follow all applicable directions and precautions on the label of other
products, before mixing with CUEVA® FUNGICIDE CONCENTRATE.

CUEVA® FUNGICIDE CONCENTRATE can be applied up to day of harvest.
When tank-mixed with products, do not apply product closer to harvest than
is permitted or stated on the other product’s label.

Pour CUEVA® FUNGICIDE CONCENTRATE into spray tank at least half filled
with water using adequate agitation. When mixed with other products proven
or known to be compatible, wettable powders should be added first, followed
in order by flowables (such as CUEVA® FUNGICIDE CONCENTRATE), and then
emulsifiable concentrates.

CUEVA® FUNGICIDE CONCENTRATE can be mixed with Bravo® (WP, 720, 500),
Captan, Daconil® 2787, Ferbam, maneb (WP or Flowable), Dithane® M-45, Man-
azate® 200, sulfur (wettable or flowable), organo phosphates, Thiodan®, Bacillus
thuringiensis Berliner, Guthion®, Pydrin®, Diazinon®, malathion for use on the
crops listed on this label, in accordance with the most restrictive of label limita-
tions and precautions. Do not exceed label dosage rates. This product cannot
be mixed with any product containing a label prohibition against such mixing.
Do not mix CUEVA® FUNGICIDE CONCENTRATE with chelated or liquid fertil-
izers. Use caution when using product with other fungicides and insecticides.
Observe all cautions and limitations on all products used in mixtures.

Chemigation

Apply this product only through sprinkler systems, including center pivot, lateral
move, end low, side (wheel) roll, traveler, bug gun, solid set, or hand move. Do
not apply this product through any other type of irrigation system.

Crop injury, lack of effectiveness, or illegal pesticide residues in the crop can
result from non-uniform distribution of treated water.
If you have questions about calibration, you should contact State Extension
Service specialists, equipment manufacturers or other experts.

Do not connect an irrigation system (including greenhouse systems) used for
pesticide application to a public water system unless the pesticide label-pre-
scribed safety devices for public water systems are in place.

A person knowledgeable of the chemigation system and responsible for its op-
eration or under the supervision of the responsible person, shall shut the system
down and make necessary adjustments should the need arise.

Public water systems mean a system for the provision to the public of piped water
for human consumption if such system has at least 15 service connections or regu-
lar serves an average of at least 25 individuals daily at least 60 days out of the year.

Chemigation systems connected to public water systems must contain a function-
al, reduced-pressure zone, back flow preventer (RPZ) or the functional equivalent in
the water supply line upstream from the point of pesticide introduction. As an op-
ion to the RPZ, the water from the public water system should be discharged into a
reservoir tank prior the pesticide introduction. There shall be a complete physical
break (air gap) between the flow outlet end of the fill pipe and the top or overflow
rim of the reservoir tank of at least twice the inside diameter of the fill pipe.

The system must contain a functional check valve, vacuum relief valve, and
low pressure drain appropriately located on the irrigation pipeline to prevent water
source contamination from back flow.

The pesticide injection pipeline must contain a functional, automatic, quick-
closing check valve to prevent the flow of fluid back toward the injection pump.

The pesticide injection pipeline must contain a functional, normally closed,
solenoid-operated valve located on the intake side of the injection pump and con-
nected to the system interlock to prevent fluid from being withdrawn from the sup-
ply tank when the irrigation system is either automatically or manually shut down.

The system must contain functional interlocking controls to automatically shut
off the pesticide injection pump when the water pump motor stops, or in cases
where there is no water pump, when the water pressure decreases to the point
where pesticide distribution is adversely affected.

The irrigation line or water pump must include a functional pressure switch,
which will stop the water pump motor when the water pressure decreases to the
point where pesticide distribution is adversely affected.

Systems must use a metering pump, such as a positive displacement injection
pump (e.g. diaphragm pump) effectively designed and constructed of materials that
are compatible with pesticides and capable of being fitted with a system interlock.

Do not apply when wind speed favors drift beyond the area intended for treatment.

Directions for use on Vegetables, Herbs, Field Crops, Nuts, Fruits including

Citrus and Berries

Mix 0.5 to 2.0 gallons of CUEVA® FUNGICIDE CONCENTRATE with 100 gallons
of water. Apply 50 to 100 gallons of diluted spray per acre. (For application by
aircraft, apply 5-25 gallons of diluted spray to one acre. Apply at least 1 quart
CUEVA® FUNGICIDE CONCENTRATE per acre.) For best control, begin treat-
ment 2 weeks before disease normally appears or when weather forecasts pre-
dict a long period of wet weather. Alternatively, begin treatment when disease
first appears, and repeat it at 10 day intervals for as long as needed, following
crop-specific application notes. Use the 2.0 gallon rate of CUEVA® FUNGICIDE
CONCENTRATE, at the minimum retreatment interval for the crop, following
heavy rain or when the amount of disease is increasing rapidly. If possible, time
applications so that 12 hours of dry weather follow application. Use the higher
rate to control diseases that may go dormant and overwinter.

CUEVA® FUNGICIDE CONCENTRATE may cause some copper toxicity on some
plant species.
### Fruit and Nut Crops

</thead>
<tbody>
<tr>
<td>Almonds</td>
<td>Bacterial spot, Bacterial canker (Pseudomonas syringae), Brown rot, Blossom blight, leaf and fruit spots, Coryneum blight (shot-hole), Anthracnose</td>
<td>For bacterial canker, apply as a dormant spray as buds begin to swell, repeating at the bud burst stage, and weekly thereafter as needed, up to six sprays. In fall spray again at 10 and 80% of leaf fall. For brown rot blossom blight apply full cover spray at delayed dormant (bud swell), popcorn, full bloom and petal fall stages. During wet weather, additional bloom sprays may be necessary. Do not apply more than 6000 gallons of diluted spray per acre per year. Do not reapply within 5 days during the growing season or within 7 days during the dormant season.</td>
</tr>
<tr>
<td>Blueberries</td>
<td>Gray mold, mucor fruit rot, Rhizopus fruit rot</td>
<td>Apply at the start of flowering and continue every 7 to 10 days until harvest. Do not apply more than 2800 gallons of diluted spray per acre per year. Do not reapply within 7 days.</td>
</tr>
<tr>
<td>Caneberries (Blackberries, Raspberries)</td>
<td>Gray mold, mucor fruit rot, Rhizopus fruit rot</td>
<td>Apply at the start of flowering and continue every 7 to 10 days until harvest. Do not apply more than 3355 gallons of diluted spray per acre per year. Do not reapply within 7 days.</td>
</tr>
<tr>
<td>Citrus (Grapefruit, Lemon, Lime, Orange, Pummelo, Tangerine)</td>
<td>Melanospe spot, greasy spot, citrus scab, Alternaria brown spot, citrus canker, Phytophthora brown rot, and Septoria</td>
<td>Repeat every 2 weeks if necessary. May cause phytophotoxicity if conditions are conducive, when mixed with other products. Do not apply more than 4200 gallons of diluted spray per acre per year. Do not reapply within 7 days.</td>
</tr>
<tr>
<td>Curants, Gooseberries</td>
<td>Powdery mildew</td>
<td>Do not apply more than 3355 gallons of diluted spray per acre per year. Do not reapply within 10 days.</td>
</tr>
<tr>
<td>Grapes</td>
<td>Downy mildew, black rot, phomopsis cane, leaf spot, powdery mildew, gray mold</td>
<td>Begin treatment when new growth reaches 1/2 inch and repeat at 7 to 14 day intervals throughout the growing season. Use Precaution: Do not mix CUEVA® FUNGICIDE CONCENTRATE with lime. Certain Vinifera and French Hybrid varieties may be sensitive to copper sprays resulting in marginal leaf burn. Before spraying these varieties, consult your State Experiment Station or make test sprays. Do not apply more than 6670 gallons of diluted spray per acre per year. Do not reapply within 3 days.</td>
</tr>
<tr>
<td>Pome Fruits (Apples, Pears, Quince)</td>
<td>Anthracnose, Cedar Apple Rust, Fireblight, Scab, Sooty Blotch, Flyspeck, Quince Rust</td>
<td>For fireblight control, apply CUEVA® in the dormant period, during bloom, or in-season cover spray applications. May cause russetting of susceptible apple varieties. Do not exceed the 1.0 gallon of product/ 100 gallons water use rate. Do not exceed one application during the fall, late dormant period. Do not exceed one application between silver tip and green tip growth stages. Do not apply more than 10,670 gallons of diluted spray per acre per year. Do not reapply within 5 days.</td>
</tr>

</tr>
</tbody>
</table>

- **Powdery mildews** tend to occur on the upper leaf surfaces, as though a white powder was sprinkled onto the plant. Powdery mildews can form a dense, white, cottony mass, making the whole leaf appear white. They are also commonly found on stems. Powdery mildews rarely kill plants. Most fungal diseases require water to infect plants. Powdery mildews are unique in that they do not require water for infection. Shade and dense plantings also promote powdery mildew. Powdery mildews commonly occur on the following plants: bean, beet, broccoli, Brussels sprouts, cauliflower, cabbage, cantaloupe, chicory, cucumber, currant, endive, gooseberry, grape, hop, kale, kohlrabi, lettuce, pea, pumpkin, rutabaga, squash, strawberry, turnip, zucchini.

- **Downy mildews** tend to occur on the lower leaf surfaces. Downy mildews are much finer than powdery mildews, and appear as fine white cotton, similar to duck down. Downy mildews can rapidly kill plant leaves during wet, cool weather, but are inhibited by hot dry weather. Downy mildews commonly occur on the following plants: bean, beet, broccoli, Brussels sprouts, cauliflower, cabbage, cantaloupe, chard, chicory, chive, cucumber, endive, garlic, grape, hop, kale, kohlrabi, leek, lettuce, onion, pea, pumpkin, rutabaga, shallot, spinach, squash, tobacco, turnip, zucchini.

- **Leaf and fruit spots** are small brown or black spots on the leaf or fruit. They commonly occur on apple and pear (scab). These spots can be caused by a range of fungal and bacterial plant diseases. Leaf and fruit spots are commonly caused by fungi belonging to the following genera: Alternaria, Cercospora, Colletotrichum, Cylindrosporum, Gloeosporium, Glomerella, Gnomonia, Marssonia, Mycosphaerella (Didymella), Phomopsis, Phyllosticta, Septoria, and Sphaceloma. Spots on leaves and fruit can expand and grow together. Leaf spot pathogens require water to infect plants. During wet weather, spots can develop into a blight, very rapidly, killing leaves, flowers and stems.

- **Rusts** are small orange blisters that appear on plant leaves, and that are full of orange powder. The orange powder is rust spores. Towards the end of the season, black spores are often produced. Rust is commonly found on grasses.

- **Fruit rots** commonly occur on strawberries, raspberries, and other fruit. They appear as soft, rotten areas on the fruit. Often the causal fungus can be seen growing and producing spores on the surface of the rotting area. Rots are often caused by fungi belonging to the following genera: Aspergillus, Botrytis, Monilia, Mucor, Penicillium, Rhizopus and Sclerotinia.

* - Non-public health bacteria

**NOTICE TO BUYER**

Seller warrants that this product conforms to the chemical description on this label and is reasonably fit for the purposes stated on this label only when used in accordance with directions under normal use conditions. This warranty does not extend to use of this product contrary to label directions, or under abnormal use conditions, or under conditions not reasonably foreseeable to seller. To the extent consistent with applicable law, buyer assumes all risk of any such use. Seller makes no other warranties, either expressed or implied.

Seller makes no other warranties, either expressed or implied.
