Notif 072308/Rev C
For preemergence control of grass and broadleaf weeds in:
- established turfgrasses (excluding golf course putting greens), lawns, and sod nurseries
- container, field-grown, and landscape ornamentals
- conifer and hardwood seedling nurseries
- established perennials and wildflower plantings
- non-crop areas including managed rights-of-way for transportation systems and utilities (including roadways, roadsides, railways, and equipment yards)
- facilities including substations, tank farms, pumping stations, parking and storage areas, and ungrazed fence rows
- Christmas tree farms
- drainage ditches in California and Arizona only

</table>

Have the product container or label with you when calling a poison control center or doctor or going for treatment.

For medical emergencies involving this product, call Prosar at 1-877-250-9291.

**PRECAUTIONARY STATEMENTS**

**HAZARDS TO HUMANS AND DOMESTIC ANIMALS**

**CAUTION:** Harmful if inhaled or absorbed through the skin. Avoid contact with skin, eyes, or clothing. Avoid breathing dust. Prolonged or frequently repeated skin contact may cause allergic reactions in some individuals.
PERSONAL PROTECTIVE EQUIPMENT (PPE)

WPS USES:
Applicators and other handlers (other than mixers and loaders) who handle this pesticide for any use covered by the Worker Protection Standard (40 CFR Part 170) - in general, agricultural plant uses are covered - must wear:
• Long-sleeved shirt and long pants
• Chemical-resistant gloves such as butyl rubber >14 mils, neoprene rubber > 14 mils, or nitrile rubber >14 mils (See instructions for Category A on the EPA chemical resistance category selection chart if you want other options.)
• Shoes plus socks

Mixers and loaders must wear:
• Long-sleeved shirt and long pants
• Chemical-resistant gloves such as butyl rubber >14 mils, neoprene rubber > 14 mils, or nitrile rubber >14 mils (See instructions for Category A on the EPA chemical resistance category selection chart if you want other options.)
• Shoes plus socks

NON-WPS USES:
Mixers and loaders who handle this product for any use NOT covered by the Worker Protection Standard (40 CFR Part 170) - in general, only agricultural plant uses are covered by the WPS - must wear:
• Chemical-resistant gloves such as butyl rubber >14 mils, neoprene rubber > 14 mils, or nitrile rubber >14 mils (See instructions for Category A on the EPA chemical resistance category selection chart if you want other options.)

Follow manufacturer’s instructions for cleaning/maintaining PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry.

ENGINEERING CONTROLS STATEMENTS: When handlers use closed systems or enclosed cabs in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170.240(d)(4-6)], the handler PPE requirements may be reduced or modified as specified in the WPS.
USER SAFETY RECOMMENDATIONS

Users should:
• Wash hands before eating, drinking, chewing gum, using tobacco, or using the toilet.
• Remove clothing immediately if pesticide gets inside; then wash thoroughly and put on clean clothing.
• After handling this product, immediately wash the outside of gloves before removing them; then remove gloves and all other PPE. Immediately wash thoroughly and change into clean clothing.

ENVIRONMENTAL HAZARDS
This product has low solubility in water. At the limit of solubility, this product is not toxic to fish. However, at concentrations substantially above the level of water solubility, it may be toxic to fish. Do not apply directly to water, to areas where surface water is present, or to intertidal areas below the mean high water mark. Drift and runoff from treated areas may be hazardous to aquatic organisms in adjacent sites. Do not contaminate water when disposing of equipment washwater.

DIRECTIONS FOR USE
It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.
AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR Part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted-entry interval (REI) of 12 hours. Exception: If this product is soil-injected or soil-incorporated, the Worker Protection Standard, under certain circumstances, allows workers to enter the treated area if there will be no contact with anything that has been treated.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated such as plants, soil, or water is:
• Coveralls
• Waterproof gloves
• Shoes plus socks

GENERAL INFORMATION

WHERE TO USE

Prodiamine 65 WDG is a preemergence herbicide that provides residual control of many grass and broadleaf weeds in:
• Established turfgrass (excluding golf course putting greens), lawns, and sod nurseries
• Container, field-grown, and landscape ornamentals
• Conifer and hardwood seedling nurseries
• Established perennial and wildflower plantings
• Non-crop areas including managed rights-of-way for transportation systems and utilities (including roadways, roadsides, railways, and equipment yards)
• Facilities including substations, tank farms, pumping stations, parking and storage areas, and ungrazed fence rows
• Christmas tree farms

Drainage ditches in California and Arizona only

HOW QUALI-PRO PRODIAMINE 65 WDG WORKS

Quali-Pro Prodiamine 65 WDG controls susceptible weeds by preventing growth and development
of newly germinated weed seeds. Weed control is most effective when Quali-Pro Prodiamine 65 WDG is activated by at least 0.5 inch of rainfall or irrigation or shallow incorporation (1-2 inches) before weed seeds germinate and within 14 days following application.

USE PRECAUTIONS
- Do not graze or feed livestock forage cut from areas treated with Quali-Pro Prodiamine 65 WDG.
- Do not apply Quali-Pro Prodiamine 65 WDG to plants that will be consumed for food use.
- Follow all applicable directions, restrictions, and precautions on the labels of EPA-registered tank mix partners.
- Do not blend Quali-Pro Prodiamine 65 WDG onto dry fertilizer or any other granular material.
- Chemigation Statement: do not apply this product through any type of irrigation system unless instructed otherwise in this label.
- Do not apply aerially.
- Do not apply to golf course putting greens.

NEW PLANTINGS, REPLANTING, AND ROTATIONAL PLANTINGS
Nursery, landscape, or non-cropland areas treated with Quali-Pro Prodiamine 65 WDG should be rotated only to ornamental species listed on this label for 1 year following application unless the following test has shown species safety:
Before planting a species not listed on this label, it is recommended that several test strips of an indicator plant such as wheat, sorghum, or corn be sown into the treated area. If the indicator plants germinate and grow normally to a height of 12 inches with normal root development, it is safe to plant.

In areas disturbed by new plantings or replanting of labeled species, it may be necessary to retreat exposed soil to maintain satisfactory weed control.

When an adjuvant is to be used with this product, Makhteshim Agan of North America, Inc. suggests the use of a Chemical Producers and Distributors Association certified adjuvant.

MIXING AND APPLICATION PROCEDURES

MIXING
Quali-Pro Prodiamine 65 WDG must be mixed thoroughly in the spray tank to ensure uniform application. Follow these steps:
1. Fill the spray tank 1/4 full with clean water or fluid fertilizer only.
2. Start agitation and check to ensure it is working properly.
3. Add Quali-Pro Prodiamine 65 WDG directly into the tank.
4. Add the rest of the carrier to obtain the final spray volume.
5. A spray colorant may be used with Quali-Pro Prodiamine 65 WDG to mark areas as they are treated. This will improve application accuracy by minimizing swath skips and overlaps.
6. Maintain vigorous agitation in the spray tank before and during the application. This will ensure a well mixed spray suspension.

7. Do not allow spray suspension to dry in the tank. Thoroughly clean the sprayer after use by flushing the system with water containing a detergent. Refer to the PESTICIDE DISPOSAL section of this label for waste disposal.

TANK MIXING QUALI-PRO PRODIAMINE 65 WDG
Quali-Pro Prodiamine 65 WDG may be tank mixed with certain other EPA-registered herbicides to provide a broader spectrum of weed control or to control emerged weeds. Refer to the specific directions for use for tank mix partners and consult the label(s) of the individual tank mix partner(s) for use rate, application timing, weeds controlled, and specific precautions and/or restrictions. Tank mixes are permitted only in states where the tank mix partner(s) are registered for the application site and the turf and ornamental species listed. When using Quali-Pro Prodiamine 65 WDG in a tank mixture with other pesticides, observe the most restrictive label limitations and precautions on the labels of the products used.

Before tank mixing with other pesticides not named on this label, compatibility must be tested. See the COMPATIBILITY TEST section below.

COMPATIBILITY TEST
Before mixing Quali-Pro Prodiamine 65 WDG with other pesticides in the spray tank, test the compatibility by mixing all components (carrier and pesticide products) in a small container in proportionate quantities. For example, a 1 qt. jar would be 1/100 the volume of a 25 gal./acre spray rate. At 1 lb./acre, the Quali-Pro Prodiamine 65 WDG rate would be proportional to 4.5 g per quart. Add approximately 1.5 teaspoons to a qt. of water. Calculate amounts for other products based on rate per acre. An approximate volume would be 1.5 teaspoons for each lb./acre of a dry formulation and 0.5 teaspoons for each pt./acre of a liquid formulation. (See following table).

<table>
<thead>
<tr>
<th>COMPONENTS FORMULATIONS</th>
<th>RATE PER ACRE</th>
<th>RATE PER 1000 SQ. FT</th>
<th>LEVEL TEASPOONS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Quali-Pro Prodiamine 65 WDG</td>
<td>1.0 lb.</td>
<td>0.4 oz.</td>
<td>1.5</td>
</tr>
<tr>
<td>Dry Tank Mix Partners</td>
<td>1.0 lb.</td>
<td>0.4 oz.</td>
<td>1.5</td>
</tr>
<tr>
<td>Liquid Tank Mix Partners</td>
<td>1.0 pt.</td>
<td>0.4 oz.</td>
<td>0.5</td>
</tr>
</tbody>
</table>

If components do not ball up or form flakes, sludge, gels, oily films, or layers, then the mixture is compatible. Incompatibility will usually occur within 5 minutes after mixing. If the components are not compatible, a compatibility agent must be added to the tank mixture. Rerun the test to determine if the
mixture is suitable after addition of the compatibility agent. If components are still not compatible, do not tank mix.

**MIXING ORDER FOR TANK MIXTURES**

Notes: 1. When mixing Quali-Pro Prodiamine 65 WDG with other components (carrier and partner pesticide products), allow products to completely dissolve between steps. This is key when tank mixing with ester formulations. 2. Maintain agitation throughout mixing and application of the mixture.

Add the products to the spray tank in the following order:
1. Add products packaged in water-soluble bags first. Agitate the tank mixture. Allow the water-soluble bags to completely dissolve and the product to disperse before adding any other tank mix partner.
2. Then add water-dispersible granules (WDG or WG formulations) and wettable powders (WP formulations). Add wettable powders to the tank as agitation continues. Allow the product to disperse completely before other products are added.
3. Add spray adjuvants and spray markers. Read the adjuvant’s label first and use only those adjuvants approved for application to turf and ornamentals.
4. Add flowable liquids (FL) or suspension concentrates (SC).
5. Add emulsifiable concentrates (EC) last.

**APPLICATION**

Apply Quali-Pro Prodiamine 65 WDG in a minimum of 20 gals./acre (0.5 gal./1000 sq. ft.) of carrier (water and/or fluid fertilizer) using a calibrated, low-pressure sprayer with 50 mesh or coarser screens. A broadcast boom or handheld wand designed for herbicide or insecticide application will provide the best results. Select nozzle pressure and gallonage to provide complete coverage.

**SPECIAL USE DIRECTIONS**

**ESTABLISHED TURF**

Quali-Pro Prodiamine 65 WDG is a preemergence herbicide that, when properly applied, will control certain grass and broadleaf weeds in established turfgrasses including:
- golf courses excluding putting greens
- lawns
- sod nurseries

The maximum amount of Quali-Pro Prodiamine 65 WDG that may be applied per year is given for each turfgrass species in the **Annual Use Rates-Turfgrass** section of this label.

For optimum weed control, Quali-Pro Prodiamine 65 WDG should be activated by at least 0.5 inch of rainfall or irrigation before weed seeds germinate and within 14 days following application. See the map below for approximate crabgrass seed germination dates.
Use Precautions - Turfgrass
1. Do not apply Quali-Pro Prodiamine 65 WDG to areas where dichondra, colonial bentgrass, velvet bentgrass, or annual bluegrass (Poa annua) are desirable species.
2. Do not harvest treated sod within 90 days of application. To avoid turfgrass injury, do not apply to newly set sod until the sod has rooted and exposed edges have filled in.
3. To avoid turfgrass injury, do not apply Quali-Pro Prodiamine 65 WDG to turf stressed by conditions such as drought, low fertility, or pest damage.
4. Disturbing the herbicide barrier with cultural practices such as diskng may result in reduced weed control.
5. Do not apply Quali-Pro Prodiamine 65 WDG to golf course putting greens.
6. If the depth of the creeping bentgrass root system becomes shallow and root tips contact prodiamine-treated soil, new root formation may be inhibited. Mowing height can affect the depth of a plant’s root system. To avoid this, do not apply Quali-Pro Prodiamine 65 WDG to creeping bentgrass less than 0.5 inch in height.
Application Timing and Rate - Turfgrass

Quali-Pro Prodiamine 65 WDG may be applied as a single application or in sequential applications to control weeds germinating throughout the year. All applications should be made before target weeds germinate. Quali-Pro Prodiamine 65 WDG will not control weeds that have already emerged.

The amount of Quali-Pro Prodiamine 65 WDG to apply is based upon:
1. the length of weed control desired (the higher the application rate, the longer the control) (see Figure 1);
2. the turf species; and
3. the maximum amount which can be applied to the turf species per calendar year (see Table 1).

</tbody>
</table>

<sup>1</sup> Quali-Pro Prodimine 65 WDG may be applied more than once a year as long as the total amount applied is not greater than the maximum application rate per calendar year for the turf species. All applications must be made before weed seeds germinate.

<sup>2</sup> May be used on newly sprigged or plugged Bermudagrass at rates not to exceed 0.80 lb./A (0.30 oz./1000 sq. ft.). Newly sprigged or plugged Bermudagrass stolon rooting may be temporarily retarded.

<sup>3</sup> Use an initial rate of 0.75-1.5 lbs./acre (0.28-0.55 oz./1000 sq. ft.) per application.

<sup>4</sup> To avoid grass injury, do not apply Quali-Pro Prodimine 65 WDG to creeping bentgrass mowed at less than 0.5 inch in height.
Weeds Controlled (Turf, Ornamentals)
When used as directed in this label, Quali-Pro Prodiamine 65 WDG will control the following weeds:

<table>
<thead>
<tr>
<th>Barnyardgrass</th>
<th>Henbit&lt;sup&gt;2&lt;/sup&gt;</th>
<th>Purslane, Common</th>
</tr>
</thead>
<tbody>

<td>(from seed)</td>
</tr>
</tbody>
</table>

<sup>1</sup> In areas where <i>Poa annua</i> is a winter annual, apply Quali-Pro Prodiamine 65 WDG (see Table 1) in August or September to established, non-overseeded turf before <i>Poa annua</i> seeds germinate. These timings are approximate. Consult State Extension Service for more specific timing for your area. Also see the section of this label “<i>Poa Annua</i> Control in Established Bermudagrass Overseeded with Perennial Ryegrass.”

<sup>2</sup> To control this weed, apply Quali-Pro Prodiamine 65 WDG in late summer, fall, or winter before weed seeds germinate.

<sup>3</sup> Fall Applications for Spring Crabgrass Control in Cool-Season Grasses: In those areas where the ground freezes in the winter, Quali-Pro Prodiamine 65 WDG can be applied in the fall at rates of 1.0-1.15 lbs./acre after the soil temperature falls below 50°F but before the ground freezes. This application will control crabgrass the following spring.

<sup>4</sup> Suppression only.

<sup>5</sup> In many areas, a single application of 1.0-2.3 lbs./acre of Quali-Pro Prodiamine 65 WDG will control goosegrass. However, under heavy goosegrass pressure and/or an extended growing season, the most effective control may be maintained by making a “split application” (i.e., two applications) that does not exceed the maximum application rate per calendar year for the turfgrass species.
WHEN TO APPLY QUALI-PRO PRODIAMINE 65 WDG AFTER OVERSEEEDING TURF

Injury to desirable seedlings is likely if Quali-Pro Prodiamine 65 WDG is applied before the secondary roots of seedlings are in the second inch of soil (not thatch plus soil). To reduce the potential to injure overseeded turf, wait 60 days after seeding or until after the second mowing, whichever is longer, before applying Quali-Pro Prodiamine 65 WDG.

When to Overseed After Application (All States)* Quali-Pro Prodiamine 65 WDG will inhibit the development of turfgrass species overseeded too soon after application. Follow rates and intervals in the table below for best overseeding/reseeding results.

*Note: See exceptions for “Poa Annua Control in Established Bermudagrass Overseeded with Perennial Ryegrass” below.

Second Application: 4 to 8 weeks *after* overseeding or when perennial ryegrass roots are in the second inch of soil.
**Poa Annua Control in Perennial Ryegrass Overseedings (Alabama, Louisiana, Georgia, Mississippi, North Carolina, South Carolina, and Tennessee Only)**
Use this product on golf courses (excluding golf course putting greens) when overseeding with perennial ryegrass only (minimum seeding rate of 350 lbs./A).

### HOW MUCH AND WHEN TO APPLY

<table>
<thead>
<tr>
<th>AMOUNT TO APPLY</th>
<th>WHEN TO APPLY</th>
<th>EXPECTED CONTROL</th>
<th>USE PRECAUTIONS</th>
</tr>
</thead>
</table>
| 0.58 - 1.0 lb./acre | 8 to 10 weeks before ryegrass overseeding | 70% or greater | Some seedling mortality and temporary reduction in root growth of new seedlings may occur.  
To reduce the potential for seedling mortality, maintain a moist seedbed with light, frequent irrigation.  
To maximize seedling establishment, use lower rate and/or the maximum time interval before overseeding. To maximize Poa annua control, use higher rate and shorter time interval before overseeding. |

### CONTAINER, FIELD GROWN, AND LANDSCAPE ORNAMENTALS (INCLUDING CHRISTMAS TREE FARMS)

#### Application Timing and Information

*Quali-Pro Prodiamine 65 WDG:*
1. Will not control emerged weeds.
2. May be applied to newly transplanted and established ornamentals as broadcast or over-the-top spray.
3. Is most effective when applied to soil free of clods, weeds, and debris such as leaves and mulch.
4. Is most effective when the product is activated in the soil before weed seeds germinate and within 14 days after application.
5. Is activated when the treated area receives at least 0.5 inch of irrigation or rainfall or shallow (1 to 2 inches) mechanical incorporation.
Use Precautions
To reduce injury potential:
1. In the spring when buds are rapidly growing and expanding, over-the-top application of Quali-Pro Prodiame 65 WDG may temporarily injure new growth of desirable plants. To reduce the possibility of injury at this time, wait to apply Quali-Pro Prodiame 65 WDG over the top of newly emerged vegetation until it has hardened off unless experience indicates that the ornamental plant will not be injured by the over-the-top application.
2. After application (immediately for deciduous plants) apply overhead irrigation to wash Quali-Pro Prodiame 65 WDG from plant surfaces onto soil (watering plants before application may improve the washing process).

Application Sites and Instructions

<table>
<thead>
<tr>
<th>SITE</th>
<th>APPLICATION INSTRUCTIONS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Newly Transplanted Container or Field Nursery Stock</td>
<td>Delay application until soil has settled around transplants. Water transplants thoroughly before application. Apply after cuttings form roots and are established. To avoid inhibition of the tissue union, apply before budding/grafting or after buds/grafts have taken.</td>
</tr>
<tr>
<td>Established Container, Field Nursery Stock, or Landscape Plants</td>
<td>Apply at any time as a broadcast, over-the-top, or directed spray.</td>
</tr>
<tr>
<td>Landscape (or Ornamental) Plantings</td>
<td>Apply as a broadcast, over-the-top, or directed spray. Delay application to newly transplanted ornamentals until soil has settled around transplants.</td>
</tr>
<tr>
<td>Bare Ground Application for Container Placement</td>
<td>Apply to soil (including mulch, gravel, wood chips, or other permeable base) upon which containerized ornamentals are placed. After Quali-Pro Prodiame 65 WDG is applied, perform shallow cultivation or hand weeding only to avoid disturbing the herbicide barrier.</td>
</tr>
<tr>
<td>In Shadehouses and Uncovered Polyhouses</td>
<td>After Quali-Pro Prodiame 65 WDG is applied, uncovered polyhouses must remain open for at least 7 days and ornamentals must receive 2 irrigations totaling at least 1/2 inch of water.</td>
</tr>
<tr>
<td>Ornamental Bulbs and Perennial Wildflower Plantings</td>
<td>Quali-Pro Prodiame 65 WDG may be applied to bulbs or perennial wildflower species listed in the section “Tolerant Ornamental Species.” Apply before or after bulbs emerge but before bulbs bloom and weeds emerge. **Tank Mixtures For Use on Container, Field Grown, and Landscape Ornamentals**

Quali-Pro Prodimine 65 WDG may be tank mixed with other registered herbicides listed on this label to provide a broader spectrum of weed control or to control emerged weeds. Tank mixes with Quali-Pro Prodimine 65 WDG are for use only in states where the tank mix partner(s), application site, and intended use pattern are registered.

Follow the label(s) of the tank mix partner(s) for application rates, timing, weeds controlled, tolerant ornamentals, and specific use precautions and/or restrictions. Before mixing pesticides in the spray tank, test compatibility by mixing the products in a small container first. See the **COMPATIBILITY TEST** section of this label.

Tolerant Ornamental Species – Container, Field Grown, and Landscape Ornamentals

Quali-Pro Prodiame 65 WDG will not harm most trees, shrubs, vines, and flowers. The species listed below in Table 2 are tolerant to Quali-Pro Prodiame 65 WDG. Quali-Pro Prodiame 65 WDG is approved for application, except in CA, to the species in Table 3. Quali-Pro Prodiame 65 WDG may be applied over the top of the listed species.

When plants are under stress (such as heat, drought, or frost damage), some cultivars of listed plants may be sensitive to Quali-Pro Prodiame 65 WDG.

VEGETATION MANAGEMENT

Quali-Pro Prodiamine 65 WDG may be applied to soil surfaces for preemergence control of many grass and broadleaf weeds in:
• Non-crop areas including ornamentals (does not include container or field grown ornamentals) and established perennial and wildflower plantings on or surrounding:
  o Managed rights-of-way for transportation systems and utilities including roadways, roadways, railways, and equipment yards;
  o Facilities including substations, tank farms, pumping stations, parking and storage areas, and ungrazed fence rows.
Weeds Controlled—Vegetation Management
When used as directed in this label, Quali-Pro Prodiame 65 WDG will control the following weeds:
Barnyardgrass
Bluegrass, Annual (*Poa annua*)
Carpetweed
Chickweed, Common¹
Chickweed, Mouseear (from seed)
Crabgrass (Large, Smooth)²
Crowfootgrass
Cupgrass, Woolly
Foxtails, Annual
Goosegrass³
Henbit¹
Itchgrass
Johnsongrass (from seed)
Junglerice
Knotweed¹
Kochia
Lambsquarter, Common
Lovegrass
Panicum (Texas, Fall, Browntop)
Pigweed
Purslane, Common
Pusley, Florida
Rescuegrass²
Shepherdspurse¹
Signalgrass, Broadleaf
Speedwell, Persian
Sprangletop
Spurge, Prostrate
Witchgrass
Woodsorrel, Yellow (from seed)

¹ To control this weed, apply Quali-Pro Prodiame 65 WDG in late summer, fall, or winter before weed seeds germinate.
² Suppression only.
³ Sequential applications may be made as long as the total amount of product applied does not exceed 2.3 lbs./A per year. To control weeds, all applications must be made before weed seeds germinate.
Application Timing and Information—Vegetation Management

Quali-Pro Prodiamine 65 WDG:
1. Provides residual preemergence weed control.
2. Will not control emerged weeds.
3. May be applied to newly transplanted and established ornamentals as a broadcast or over-the-top spray.
4. Is most effective when the product is activated in the soil before weed seeds germinate and within 14 days after application.
5. Is activated when the treated area receives at least 0.5 inches of irrigation or rainfall or shallow (1-2 inches) mechanical incorporation.
6. Is most effective when applied to soil free of clods, weeds, and debris such as leaves and mulch.

Use Precautions—Vegetation Management

To reduce injury potential:
1. Direct application of Quali-Pro Prodiamine 65 WDG to rapidly growing tissue or buds may injure desirable plants. In the spring when buds are rapidly growing and expanding, over-the-top application of Quali-Pro Prodiamine 65 WDG may temporarily injure new growth of desirable plants. To reduce the possibility of injury at this time, wait to apply Quali-Pro Prodiamine 65 WDG over the top of newly emerged vegetation until it has hardened off unless your experience indicates that the ornamental plant will not be injured by the over-the-top application.
2. After application (immediately for deciduous plants), irrigate the treated area to wash Quali-Pro Prodiamine 65 WDG from plant surfaces onto soil. Watering plants before application may improve the washing process.

How Much and When to Apply—Vegetation Management

<table>
<thead>

Tolerant Ornamental Species*—Vegetation Management
*Not for use on container or field grown ornamentals

Quali-Pro Prodiamine 65 WDG will not harm most trees, shrubs, vines, and flowers. The species listed below in Table 4 are tolerant to Quali-Pro Prodiamine 65 WDG.

Quali-Pro Prodiamine 65 WDG is approved for application, except in California, to the species in Table 5. Quali-Pro Prodiamine 65 WDG may be applied over the top of the listed species.

When plants are under stress (such as heat, drought, or frost damage), some cultivars of listed plants may be sensitive to Quali-Pro Prodiamine 65 WDG.

CONIFER AND HARDWOOD SEEDLING NURSERIES (NON-ORNAMENTAL, FORESTRY USE ONLY)—VEGETATION MANAGEMENT—QUALI-PRO PRODIAMINE 65 WDG

1. Provides residual preemergence weed control in conifer and hardwood seedling nurseries.
2. Provides the most effective weed control when the product is activated in the soil by 0.5 inch of irrigation or rainfall before weed seeds germinate and within 14 days after application.
3. Should be applied to conifer and hardwood seedling nurseries any time after the soil has settled around newly transplanted seedlings and liners.

Tank Mixtures—Conifer Seedling Nurseries—Vegetation Management

Quali-Pro Prodiame 65 WDG may be tank mixed with other registered herbicides listed on this label to provide a broader spectrum of weed control or to control emerged weeds. Tank mixes with Quali-Pro Prodiame 65 WDG are for use only in states where the tank mix partner, application site, and intended use pattern are registered.

Follow the label of the tank mix partner for application rates, timing, weeds controlled, tolerant ornamentals, and specific use precautions and/or restrictions. Before combining the tank mix partner in the spray tank, test compatibility by mixing the products in small container. See the COMPATIBILITY TEST section.

VEGETATION MANAGEMENT (NON-CROP AREAS)
- May be applied in soil surfaces for preemergence control of many grass and broadleaf weeds.
- Is most effective when activated by at least 0.5 inch rainfall or irrigation or shallow incorporation before weed seeds germinate and within 14 days after application.

</table>

<sup>1</sup> Products with this chemical as the active ingredient and which are labeled for the same use may be used.

**CHEMIGATION INSTRUCTIONS—OVERHEAD SPRINKLER IRRIGATION APPLICATION**

**Use Precautions**

1. Apply this product only through an overhead sprinkler irrigation system. Do not apply this product through any other type of irrigation system.

2. Crop injury, lack of effectiveness, or illegal pesticide residues in the crop can result from nonuniform distribution of treated water. If you have questions about calibration, contact State Extension Service specialists, equipment manufacturers, or other experts.

3. To avoid injury to foliage, make sure foliage is sufficiently wet before application or adequate irrigation is applied after application.

4. If sprinkler distribution patterns do not overlap sufficiently, unacceptable weed control may result.

5. If sprinkler distribution patterns overlap excessively, injury to leatherleaf ferns may result.

6. Do not connect an irrigation system (including greenhouse systems) used for pesticide application to public water systems unless pesticide label-prescribed safety devices for public water systems are in place.

7. If necessary, a person knowledgeable of the chemigation system and responsible for its operation, or someone under the supervision of the responsible person, shall shut the system down and make necessary adjustments.
Operation Instructions
1. The system must contain a functional check valve, vacuum relief valve, and low-pressure drain appropriately located on the irrigation pipeline to prevent water source contamination from backflow.
2. The pesticide injection pipeline must contain a functional automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.
3. The pesticide injection pipeline must also contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.
4. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops.
5. The irrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.
6. Systems must use a metering pump such as a positive displacement injection pump (e.g., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.
7. Do not apply when wind speed favors drift beyond the area intended for treatment.
8. Prepare a mixture with a minimum of 20 parts of water to 1 part Quali-Pro Prodiamine 65 WDG and inject this herbicide suspension mixture into the overhead system. Injecting a larger volume of a more dilute mixture per hour will usually provide more accurate calibration of metering equipment. Maintain sufficient agitation to keep the herbicide in suspension.
9. Before injecting Quali-Pro Prodiamine 65 WDG into the system, run the irrigation system long enough to wet the foliage, then inject Quali-Pro Prodiamine 65 WDG suspension mixture in the pesticide supply tank (see number 8 above) in 1 inch of irrigation water. After the application is complete, continue the irrigation until all residues are washed off the foliage.

Application Precautions
To reduce injury potential:
1. Direct application of Quali-Pro Prodiamine 65 WDG to rapidly growing tissue or buds may injure desirable plants. Do not make over-the-top application of Quali-Pro Prodiamine 65 WDG until after newly formed tissue has hardened off.
2. Immediately wash Quali-Pro Prodiamine 65 WDG from plant surfaces onto soil.
3. Do not apply to newly transplanted ferns until after the plants are established and begin to grow.
Weeds controlled

COMMON NAME                                SCIENTIFIC NAME
Florida Betony                              Stachys flordana

Weeds suppressed

COMMON NAME                                SCIENTIFIC NAME
Wandering Jew                               Zebria pendula

FOR CONTROL OF CERTAIN WEEDS ON DRAINAGE DITCHES IN CALIFORNIA AND ARIZONA ONLY

Irrigation, Drainage Ditches, Spreading Grounds, Channels, Canals, and Similar Sites:
Apply 1.0 to 2.3 lbs. per acre for preemergent control of shallow germinating annual grasses and small seeded broadleaf weeds. Prodiame 65WG inhibits growth and development of newly germinated weed seeds. It will not control established vegetation. Higher rates of application provide for a longer control period. Sequential applications are allowed so long as the total amount of product applied does not exceed the maximum annual application of 2.3 lbs. per acre. Apply only when water is not present. For irrigation ditches, apply when ditch is not in use. To minimize movement of Prodiame 65WG with irrigation water and to activate product, it is essential that the herbicide be fixed in the soil by moisture. Apply before expected seasonal rainfall (if possible when soil in the ditch is still moist). Following treatment, if rainfall has not totaled at least one-half inch within 14 to 21 days, fill ditch with water and allow to stand for 48 hours; drain off any remaining water before using ditch.

Wastewater Treatment Facilities (Levees)
Apply 1.0 to 2.3 lbs. per acre for preemergent control of shallow germinating annual grasses and small seeded broadleaf weeds. Use the higher rate of application for longer control periods. Sequential applications are allowed so long as the total amount of product applied does not exceed the maximum annual application of 2.3 lbs. per acre. Applications may be made down to the water level. Do not apply to the water. Care must be taken not to allow overspray of the water or drift into the water.
STORAGE AND DISPOSAL

Do not contaminate water, food, or feed by storage or disposal.

PESTICIDE STORAGE: Store in original container away from fertilizer, feed, or foodstuffs.

PESTICIDE DISPOSAL: Wastes resulting from the use of this product may be disposed of on site or at an approved waste disposal facility.

CONTAINER DISPOSAL:

Nonrefillable Container (flexible-bag-all weights): Nonrefillable container. Do not reuse or refill this container. Offer for recycling, if available.

Nonrefillable Container (rigid-fifty lbs. or less): Nonrefillable container. Do not reuse or refill this container. Offer for recycling, if available. Clean container promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank. Fill the container ¼ full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times.

Nonrefillable Container (rigid-greater than fifty lbs.): Nonrefillable container. Do not reuse or refill this container. Offer for recycling, if available. Clean container promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank. Fill the container ¼ full with water. Replace and tighten closures. Tip container on its side and roll it back and forth, ensuring at least one complete revolution, for 30 seconds. Stand the container on its end and tip it back and forth several times. Turn the container over onto its other end and tip it back and forth several times. Empty the rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Repeat this procedure two more times.

Refillable Container: Refillable container. Refill this container with prodiamine only. Do not reuse this container for any other purpose. Cleaning the container before final disposal is the responsibility of the person disposing of the container. Cleaning before refilling is the responsibility of the refiller. To clean the container before final disposal, empty the remaining contents from this container into application equipment or mix tank. Fill the container about 10 percent full with water. Agitate vigorously or recirculate water with the pump for 2 minutes. Pour or pump rinsate into application equipment or rinsate collection system. Repeat this rinsing procedure two more times.

LIMITATION OF WARRANTY AND LIABILITY

Read the entire directions for use, conditions of warranties and limitations of liability before using this product. If terms are not acceptable, return the unopened product container at once.

By using this product, user or buyer accepts the following CONDITIONS, DISCLAIMER OF WARRANTIES, and LIMITATIONS OF LIABILITY.

CONDITIONS: The directions for use of this product are believed to be adequate and must be
followed carefully. However, it is impossible to eliminate all risks associated with the use of this product. Crop injury, ineffectiveness or other unintended consequences may result because of such factors as weather conditions, presence of other materials, or the manner of use or application, all of which are beyond the control of Makhteshim Agan of North America, Inc. All such risks shall be assumed by the user or buyer.

**DISCLAIMER OF WARRANTIES:** To the extent consistent with applicable law, Makhteshim Agan of North America, Inc. makes no other warranties, express or implied, of merchantability or of fitness for a particular purpose or otherwise, that extend beyond the statements made on this label. No agent of Makhteshim Agan of North America, Inc. is authorized to make any warranties beyond those contained herein or to modify the warranties contained herein. To the extent consistent with applicable law, Makhteshim Agan of North America, Inc. disclaims any liability whatsoever for special, incidental or consequential damages resulting from the use or handling of this product.

**LIMITATIONS OF LIABILITY:** To the extent consistent with applicable law, the exclusive remedy of the user or buyer for any and all losses, injuries or damages resulting from the use or handling of this product, whether in contract, warranty, tort, negligence, strict liability or otherwise, shall not exceed the purchase price paid or at Makhteshim Agan of North America, Inc.’s election, the replacement of product.
