For use only on Clearfield® canola, Clearfield lentil, Clearfield rice, Clearfield and Clearfield® Plus sunflower, and Clearfield and Clearfield Plus wheat

Active Ingredient:
ammonium salt of imazamox: 2-[4,5-dihydro-4-methyl-4-(1-methylethyl)-5-oxo-1H-imidazol-2-yl]-5-(methoxymethyl)-3-pyridinecarboxylic acid* ........................................ 12.1%
Other Ingredients: ........................................................................................................................................ 87.9%
Total: .................................................................................................................................................................. 100.0%

* Equivalent to 11.4% 2-[4,5-dihydro-4-methyl-4-(1-methylethyl)-5-oxo-1H-imidazol-2-yl]-5-(methoxymethyl)-3-pyridinecarboxylic acid
1 gallon contains 1.0 pound of active ingredient as the free acid.

EPA Reg. No. 241-441 EPA Est. No. 241-PR-002

KEEP OUT OF REACH OF CHILDREN

CAUTION/PRECAUCION

Si usted no entiende la etiqueta, busque a alguien para que se la explique a usted en detalle. (If you do not understand this label, find someone to explain it to you in detail.)

See inside for complete First Aid, Precautionary Statements, Directions For Use, Conditions of Sale and Warranty, and state-specific crop and/or use site restrictions.

In case of an emergency endangering life or property involving this product, call day or night 1-800-HELP (4357).

Net Contents: 1 gallon (3.785 liters)

BASF Corporation
26 Davis Drive
Research Triangle Park, NC 27709
Precautionary Statements

Hazard to Humans and Domestic Animals
CAUTION. Harmful if absorbed through skin or inhaled. Avoid breathing spray mist. Avoid contact with skin, eyes, or clothing.

Personal Protective Equipment (PPE)
Applicators and other handlers must wear:
• Long-sleeved shirt and long pants
• Chemical-resistant gloves, such as butyl rubber ≥ 14 mils, or natural rubber ≥ 14 mils, or neoprene rubber ≥ 14 mils, or nitrile rubber ≥ 14 mils
• Shoes plus socks

Follow the manufacturer’s instructions for cleaning and maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry.

FIRST AID

If on skin or clothing
• Take off contaminated clothing.
• Rinse skin immediately with plenty of water for 15 to 20 minutes.
• Call a poison control center or doctor for treatment advice.

If in eyes
• Hold eyes open and rinse slowly and gently with water for 15 to 20 minutes.
• Remove contact lenses, if present, after first 5 minutes; then continue rinsing eyes.
• Call a poison control center or doctor for treatment advice.

If inhaled
• Move person to fresh air.
• If person is not breathing, call 911 or an ambulance; then give artificial respiration, preferably mouth to mouth if possible.
• Call a poison control center or doctor for further treatment advice.

HOTLINE NUMBER

Have the product container or label with you when calling a poison control center or doctor or going for treatment.
You may also contact BASF Corporation for emergency medical treatment information: 1-800-832-HELP (4357).

Environmental Hazards

This pesticide may be hazardous to plants outside the treated area. DO NOT apply directly to water, or to areas where surface water is present, or to intertidal areas below the mean high water mark except as directed in this label. Off-site movement from spray drift, volatilization, and runoff may be hazardous to neighboring crops and vegetative habitat used for food and cover by wildlife and aquatic organisms. DO NOT contaminate water when disposing of equipment washwater or rinsate.

USER SAFETY RECOMMENDATIONS

Users should:
• Wash hands before eating, drinking, chewing gum, using tobacco, or using the toilet.
• Remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
• Users should remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.
• Call a poison control center or doctor for further treatment advice.

Environmental Hazards

This pesticide may be hazardous to plants outside the treated area. DO NOT apply directly to water, or to areas where surface water is present, or to intertidal areas below the mean high water mark except as directed in this label. Off-site movement from spray drift, volatilization, and runoff may be hazardous to neighboring crops and vegetative habitat used for food and cover by wildlife and aquatic organisms. DO NOT contaminate water when disposing of equipment washwater or rinsate.
Directions For Use

It is a violation of federal law to use this product in a manner inconsistent with its labeling. This label must be in possession of the user at time of pesticide application.

DO NOT apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your state or tribe, consult the agency responsible for pesticide regulation.

Ensure spray drift to nontarget species does not occur.
DO NOT apply Beyond® Clearfield® production system herbicide in any manner not specifically described in this label.
DO NOT apply this product through any type of irrigation system.
When applied by either ground or air, Beyond spray drift or other indirect contact may injure sensitive crops, including non-imidazolinone-tolerant canola, lentil, rice, sunflower, or wheat; leafy vegetables; and sugar beets.

Spray equipment used for Beyond application must be drained and thoroughly cleaned with water before being used to apply other products.
Observe all cautions and limitations on this label and on the labels of products used in combination with Beyond. DO NOT use Beyond other than in accordance with the instructions set forth on this label. Keep containers closed to avoid spills and contamination.

AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR Part 170. This standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

DO NOT enter or allow worker entry into treated areas during the restricted-entry interval (REI) of 4 hours.

EXCEPTION: If the product is soil-injected or soil-incorporated, the Worker Protection Standard, under certain circumstances, allows workers to enter the treated area if there will be no contact with anything that has been treated.
PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water, is:

- Coveralls
- Chemical-resistant gloves, such as butyl rubber ≥ 14 mils, or natural rubber ≥ 14 mils, or neoprene rubber ≥ 14 mils, or nitrile rubber ≥ 14 mils
- Shoes plus socks

STORAGE AND DISPOSAL

DO NOT contaminate water, food, or feed by storage or disposal.

Pesticide Storage
- KEEP FROM FREEZING.
- DO NOT store below 32° F.

Pesticide Disposal
Wastes resulting from the use of this product must be disposed of on-site or at an approved waste disposal facility.

Container Handling
Nonrefillable Container. DO NOT reuse or refill this container. Triple rinse or pressure rinse container (or equivalent) promptly after emptying; then offer for recycling, if available, or reconditioning, if appropriate, or puncture and dispose of in a sanitary landfill, or by incineration, or by other procedures approved by state and local authorities.

(continued)
In Case of Emergency

In case of medical emergency regarding this product, call:
• Your local doctor for immediate treatment
• Your local poison control center (hospital)
• BASF Corporation 1-800-832-HELP (4357)

Steps to take if material is released or spilled:
• Dike and contain the spill with inert material (sand, earth, etc.) and transfer liquid and solid diking material to separate containers for disposal.
• Remove contaminated clothing, and wash affected skin areas with soap and water.
• Wash clothing before reuse.
• Keep the spill out of all sewers and open bodies of water.

Beyond® herbicide, a soluble liquid, is a postemergence herbicide to control and suppress many broadleaf and grass weeds and sedges, as listed in this label.
The mode of weed-killing activity involves uptake of Beyond by foliage and/or weed roots and rapid translocation to the growing points. After Beyond application, susceptible weeds may show yellowing, and weed growth will stop. Susceptible weeds stop growing and either die or are not competitive with the crop.

Adequate soil moisture is important for optimum Beyond activity. When adequate soil moisture is present, Beyond will provide residual activity on susceptible germinating weeds. Activity on established weeds depends on weed species and location of its root system in the soil. Timely cultivation after Beyond application may improve weed control.

Occasionally, internode shortening and/or temporary yellowing of crop plants may occur following Beyond application. These effects, which occur infrequently and are temporary, can be more pronounced if crops are growing in a stressful environmental or hot and humid conditions. Normal growth and appearance should resume within 1 to 2 weeks.

STORAGE AND DISPOSAL

Container Handling

Triple rinse containers small enough to shake (capacity ≤ 5 gallons) as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container 1/4 full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank, or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times.

Triple rinse containers too large to shake (capacity > 5 gallons) as follows: Empty the remaining contents into application equipment or a mix tank. Fill the container 1/4 full with water. Replace and tighten closures. Tip container on its side and roll it back and forth, ensuring at least one complete revolution, for 30 seconds. Stand the container on its end and tip it back and forth several times. Turn the container over onto its other end and tip it back and forth several times. Empty the rinsate into application equipment or a mix tank, or store rinsate for later use or disposal. Repeat this procedure two more times.

Pressure rinse as follows: Empty the remaining contents into application equipment or mix tank and continue to drain for 10 seconds after the flow begins to drip. Hold container upside down over application equipment or mix tank, or collect rinsate for later use or disposal. Insert pressure rinsing nozzle in the side of the container and rinse at about 40 PSI for at least 30 seconds. Drain for 10 seconds after the flow begins to drip.

In case of large-scale spill of this product, call:
• CHEMTREC 1-800-424-9300
• BASF Corporation 1-800-832-HELP (4357)
DO NOT tank mix organophosphate or carbamate insecticides with Beyond® herbicide on Clearfield® or Clearfield® Plus crops unless otherwise specified in writing by BASF. When carbamate or organophosphate (such as Lorsban® insecticide) insecticides are tank mixed with Beyond, temporary injury may result to the treated crop. Separate organophosphate and Beyond application by at least 7 days to reduce potential for injury.

Use of Beyond is expected to result in normal growth of rotational crops in most situations; however, various environmental and agronomic factors make it impossible to eliminate all risks associated with the use of this product and, therefore, rotational crop injury is always possible.

Replanting

If replanting is necessary in a field previously treated with Beyond, the field may be replanted to beans (dry), Clearfield canola, Clearfield corn, Clearfield flax, Clearfield and Clearfield Plus sunflower, Clearfield and Clearfield Plus wheat, edamame, peas (English), peas (dry), lima beans (succulent), snap beans, or soybeans. Rework the soil no deeper than 2 inches. DO NOT apply a second treatment of Beyond. DO NOT apply Extreme® herbicide, Pursuit® herbicide, Pursuit® Plus EC herbicide, Raptor® herbicide, or Scepter® herbicide if edamame or soybeans are replanted.

Resistance Management

Naturally occurring biotypes of some of the weeds listed on this label may not be effectively controlled by this and/or other products with the ALS/AHAS enzyme-inhibiting mode of action. Other herbicides with the ALS/AHAS enzyme-inhibiting mode of action include sulfonylureas (e.g. Finesse® herbicide), imidazolines (e.g. Pursuit or Scepter), triazinopyrimidine sulfonylides (e.g. FirstRate® herbicide), sulfonylaminocarboxyl triazolines (e.g. Olympus™ herbicide), and pyrimidyl benzoates (e.g. Staple® herbicide). If naturally occurring ALS/AHAS-resistant biotypes are present in a field, Beyond and/or any other ALS/AHAS enzyme-inhibiting mode-of-action herbicide should be tank mixed or applied sequentially with an appropriate registered herbicide having a different mode of action to ensure control. A weed biotype is a naturally occurring plant within a given species that has a slightly different, but distinct, genetic makeup from other plants.

Beyond is very active against many broadleaf and grass weed species. For long-term weed management, use at least two herbicides with different modes of action to reduce potential for weed resistance. Crop (and herbicide) rotation is effective in managing weed resistance where herbicides of different modes of action are used. Tillage, where practical (such as in fallow production or before planting), is effective in controlling weeds to minimize resistance development. Additionally, a burndown herbicide during fallow or before planting is effective in reducing weed resistance development.

Beyond has no preharvest interval (PHI) for any crop.

Mixing Instructions

Postemergence application of Beyond requires the addition of an adjuvant AND a nitrogen fertilizer solution unless otherwise directed in this label.

Adjuvants

When an adjuvant (or a specific adjuvant product, such as a drift control agent) is to be used with this product, the use of a Chemical Producers and Distributors Association (CPDA) certified adjuvant is recommended.
Crop Oil Concentrate (COC), Methylated Seed Oil (MSO), or High Surfactant Oil Concentrate (HSOC)

Petroleum-based or vegetable seed-based crop oil concentrate may be used. Methylated seed oil is recommended when weeds are under moisture or temperature stress.

DO NOT use crop oil concentrate or methylated seed oil with Beyond™ herbicide on Clearfield® lentil, Clearfield sunflower, or Clearfield wheat. Crop oil concentrate or methylated seed oil may be used with Beyond on Clearfield® Plus varieties of sunflower or wheat.

Use methylated seed oil or crop oil concentrate at 1 to 2 gallons/100 gallons of spray solution (1 to 2% volume/volume [v/v]). Use HSOC at 0.5 gallon/100 gallons of spray solution (0.5% v/v).

OR

Surfactant

Use nonionic surfactant (NIS) containing at least 80% active ingredient. Apply surfactant at 1 quart/100 gallons of spray solution (0.25% v/v). Organosilicone surfactant may be used in place of NIS.

AND

Nitrogen Fertilizer

Recommended nitrogen-based fertilizers include liquid fertilizers [such as liquid ammonium sulfate (AMS), 28% N, 32% N, or 10–34–0] at 2.5 gallons/100 gallons of spray solution. Instead of liquid fertilizer, spray-grade ammonium sulfate may be used at 12 to 15 pounds/100 gallons of spray solution.

For Clearfield spring wheat and Clearfield winter wheat, AMS/nitrogen substitutes are not recommended in place of ammonium sulfate, 28% N, 32% N, or 10–34–0 unless recommended by BASF.

When targeting feral rye or other weeds under moisture or temperature stress, using higher nitrogen fertilizer rates (urea/ammonium nitrate [LAN] at 5% v/v or 20 lbs AMS/100 gallons) may improve weed control. Additional crop response may be observed when higher fertilizer rates are used.

Nitrogen fertilizer is not required when applied in use areas south of Interstate Highway 40, except in the states of Arizona, California, New Mexico, Oklahoma, and Texas.

Liquid Fertilizer as a Carrier

DO NOT apply Beyond in liquid fertilizer as a carrier except to Clearfield or Clearfield Plus spring wheat and Clearfield or Clearfield Plus winter wheat.

Tank Mixing Instructions

When applying Beyond as the only herbicide:
1. Fill spray tank 1/2 to 3/4 full with clean water.
2. While agitating, add Beyond to the spray tank.
3. Add adjuvants.
4. Fill remainder of spray tank with water.

If other herbicides or other spray tank components are tank mixed with Beyond, while agitating, add components in the following order and thoroughly mix after adding each component.
1. Fill spray tank 1/2 to 3/4 full with clean water.
2. Add soluble-packet products and thoroughly mix.
3. Add WP (wettable powder), DG (dispersible granule), or liquid flowable formulations not in soluble packets.
4. Add Beyond and thoroughly mix.
5. Add other aqueous solution products.
6. Add EC (emulsifiable concentrate) products.
7. Add surfactant or crop oil to the spray tank.
8. Add nitrogen fertilizer solution.
9. While agitating, fill the remainder of the tank with water.

When Beyond is used in combination with another herbicide, refer to the respective label for rates, methods of application, proper timing, weeds controlled, restrictions, and precautions. Always use in accordance with the most restrictive label restrictions and precautions. DO NOT exceed label rates.
**Beyond® herbicide** cannot be mixed with any product containing a label prohibiting such mixtures.

**Cleaning Spray Equipment**
To avoid injury to sensitive crops, spray equipment used for Beyond application must be drained and thoroughly cleaned with water before being used to apply other products.

**Spraying Instructions**

**DO NOT** apply when wind conditions may result in drift, when temperature inversion conditions exist, or when spray may be carried to sensitive crops. Sensitive crops include, but are not limited to, leafy vegetables and sugar beets.

**Ground Application**
Uniformly apply with properly calibrated ground equipment in 10 or more gallons of water per acre. A spray pressure of 20 to 40 PSI is recommended. To ensure thorough coverage, use a minimum of 20 gallons of water per acre when applying Beyond to minimum-till or no-till crops. Use higher gallonage for fields with dense vegetation or heavy crop residue. Adjust the boom height to ensure proper coverage of weed foliage (according to manufacturer’s instructions). Use flat-fan nozzle tips or similar appropriate nozzle tips to ensure thorough coverage. Avoid overlaps when spraying.

**Ground Application with a Low-volume Sprayer**
Beyond may be applied with a low-volume sprayer. When applying Beyond with a low-volume sprayer, spray weeds before they reach the maximum size listed in this label. Weed control depends on thorough spray coverage. The sprayer must be calibrated to deliver the recommended spray volume and pressure to ensure thorough spray coverage of weeds.

**Aerial Application**
Beyond® may be applied by air to all crops listed on this label. Uniformly apply with properly calibrated equipment in 5 or more gallons of water per acre. The addition of an adjuvant AND a nitrogen fertilizer solution are required for optimum weed control, unless otherwise directed in this label. Nonuniform application of Beyond through aerial equipment may increase Clearfield® crop response, especially when applied to large slopes and hills. All risks associated with nonuniform application shall be assumed by the user.

Avoiding spray drift at the application site is the responsibility of the applicator. The interaction of many equipment-related and weather-related factors determines the potential for spray drift. The applicator and the grower are responsible for considering all these factors when making decisions.

The following drift-management requirements must be followed to avoid off-target drift movement from aerial application to agricultural field crops.

1. The distance of the outermost nozzles on the boom must not exceed 3/4 the length of the wingspan or rotor.
2. Nozzles must always point backward parallel with the airstream and never be pointed downward more than 45 degrees.

Where states have more stringent regulations, they must be observed.

The applicator must be familiar with and take into account the information covered in the aerial drift reduction advisory information following.

**Information on Droplet Size**

The most effective way to reduce drift potential is to apply large droplets. The best drift management strategy is to apply the largest droplets that provide sufficient coverage and control. Applying larger droplets reduces drift potential but will not prevent drift if applications are made improperly or under unfavorable environmental conditions (see Wind;...
Temperature and Humidity; and Temperature Inversions.

Controlling droplet size:

- **Volume** - Use high flow rate nozzles to apply the highest practical spray volume. Nozzles with higher rated flows produce larger droplets.
- **Pressure** - DO NOT exceed nozzle manufacturer’s recommended pressures. For many nozzle types, lower pressure produces larger droplets. When higher flow rates are needed, use higher flow rate nozzles instead of increasing pressure.
- **Number of Nozzles** - Use the minimum number of nozzles that provide uniform coverage.
- **Nozzle Orientation** - Orienting nozzles so the spray is released parallel to the airstream produces larger droplets than other orientations and is recommended practice. Significant deflection from the horizontal will reduce droplet size and increase drift potential.
- **Nozzle Type** - Use a nozzle type designed for the intended application. With most nozzle types, narrower spray angles produce larger droplets. Consider using low-drift nozzles. Solid-stream nozzles oriented straight back produce the largest droplets and lowest drift.

**Boom Length**
For some use patterns, reducing effective boom length to less than 3/4 of the wingspan or rotor length may further reduce drift without reducing swath width.

**Application Height**
Applications should not be made at a height greater than 10 feet above the top of the largest plants unless a greater height is required for aircraft safety. Making applications at the lowest height that is safe reduces exposure of droplets to evaporation and wind.

**Swath Adjustment**
When applications are made with a crosswind, the swath will be displaced downwind. Therefore, on the upwind and downwind edges of the field, the applicator must compensate for this displacement by adjusting the path of the aircraft upwind. Swath adjustment distance should increase with increasing drift potential (higher wind, smaller droplets, etc.).

**Wind**
Drift potential is lowest between wind speeds of 2 to 10 mph. However, many factors, including droplet size and equipment type, determine drift potential at any given speed. Application should be avoided below 2 mph because of variable wind direction and high inversion potential.

**Temperature and Humidity**
When making applications in low relative humidity, set up equipment to produce larger droplets to compensate for evaporation. Droplet evaporation is most severe when conditions are both hot and dry.

**Temperature Inversions**
Applications should not occur during a temperature inversion because drift potential is high. Temperature inversions restrict vertical air mixing, which causes small suspended droplets to remain in a concentrated cloud. This cloud can move in unpredictable directions because of the light, variable winds common during inversions. Temperature inversions are characterized by increasing temperatures with altitude and are common on nights with limited cloud cover and light-to-no wind. They begin to form as the sun sets and often continue into the morning. Their presence can be indicated by ground fog; however, if fog is not present, inversions can also be identified by the movement of smoke from a ground source or an aircraft smoke generator. Smoke that layers and moves laterally in a concentrated cloud (under low wind conditions) indicates an inversion, while smoke that moves upward and rapidly dissipates indicates good vertical air mixing.
Sensitive Areas
The pesticide should only be applied when potential for drift to adjacent sensitive areas (e.g. residential areas, bodies of water, known habitat for threatened or endangered species, or nontarget crops) is minimal (e.g. when wind is blowing away from sensitive areas).

Applicator is responsible for any loss or damage which results from spraying Beyond® herbicide in a manner other than specified in this label. In addition, applicator must follow all applicable state and local regulations and ordinances in regard to spraying.

Application Information
Apply Beyond as a postemergence treatment when weeds are actively growing and before they exceed the maximum specified size; see Weeds Controlled sections.

Delay application until the majority of weeds are at the specified growth stage. Apply Beyond when weeds are small and actively growing.

An adjuvant (either surfactant OR crop oil concentrate) AND nitrogen fertilizer MUST be added to the spray solution for optimum weed control. See Adjuvants section under Mixing Instructions for specific instructions.

When Beyond is applied postemergence, absorption will occur through both roots and foliage. Susceptible weeds stop growing and die or are not competitive with the crop. Beyond not only controls many existing broadleaf and grass weeds when applied postemergence, it also provides activity on susceptible weeds that may emerge shortly after application.

Weeds are most easily controlled when actively growing. Under cold temperature conditions (less than 40° F maximum daytime temperature), weed control may be less.

For improved weed control, cultivate (where possible) 7 to 10 days after a postemergence Beyond application. This timely cultivation will enhance residual weed control activation, especially under dry conditions.

Apply Beyond a minimum of 1 hour before rainfall or overhead irrigation.

Weeds Controlled
(for all labeled crops except Clearfield® Rice1)

When used as directed, Beyond will control or suppress the following weeds in Clearfield canola, lentil, spring wheat, sunflower, and winter wheat; and Clearfield® Plus spring wheat, sunflower, and winter wheat.

For tank mix recommendations and instructions for specific weed problems, go to the Crop-specific Information section of this label.

1 For weeds controlled in Clearfield rice, go to Clearfield Rice in the Crop-specific Information section of this label.

* Soil-applied grass herbicide, such as Prowl® 3.3 EC or Prowl® H2O, is followed by a postemergence application of Beyond® at a broadcast rate of 4 to 6 fl ozs/acre. This sequential application of Prowl® 3.3 EC or Prowl® H2O followed by Beyond® only applies to Clearfield® lentil, and Clearfield® and Clearfield® Plus® sunflower.

† Not for use in California

1 Will not provide residual control of devil’s claw that emerges after application.

2 For optimal control of filaree, you must use at least 5 fl ozs/acre of Beyond®.

3 Control of light-to-moderate populations of ALS-susceptible biotypes only

4 For control, apply 5 to 6 fl ozs/acre west of the Rocky Mountains.

5 Suppression only at 4 fl ozs/acre

6 Not for use in California

*Soil-applied grass herbicide, such as Prowl 3.3 EC or Prowl H2O, must be soil-applied at a full labeled rate. This sequential application of Prowl 3.3 EC or Prowl H2O followed by Beyond only applies to Clearfield lentil, and Clearfield and Clearfield Plus sunflower.  
† Not for use in California.
Crop-specific Information

This section grants rights necessary for applying Beyond® herbicide to fields planted with Clearfield® or Clearfield® Plus crops and provides directions for Beyond in specific crops.

PROVISIONS FOR REGISTERED Clearfield® AND Clearfield® Plus CROPS

Subject to the terms and conditions set forth on this label, BASF hereby grants to the purchaser, a limited, nonexclusive, revocable, nontransferable license under claims in Licensed Patents relating to applying imazamox herbicide to fields planted with any Registered Clearfield or Clearfield Plus Crop, in full accordance with the directions printed on this label, for the sole purposes of spraying or otherwise applying only Beyond to fields planted with such Registered Clearfield or Clearfield Plus Crop to produce grain for use or sale only as food or feed. Except as set forth above, no other license or right, whether express or implied, is granted to the purchaser under any Licensed Patents, including, without limitation, any right or license: (i) to spray or otherwise apply any herbicide other than Beyond to any Registered Clearfield or Clearfield Plus Crop or to the area where any Registered Clearfield or Clearfield Plus Crop is grown; (ii) to spray or otherwise apply Beyond on any seed or plant that is not a Registered Clearfield or Clearfield Plus Crop or to the area where such seeds or plants are grown; (iii) to conduct mutagenesis, crop breeding or research, or to generate herbicide registration data using Beyond or any Registered Clearfield or Clearfield Plus Crop; or (iv) under any claims in Licensed Patents to plant or grow Registered Clearfield or Clearfield Plus Crops.

“Licensed Patents” is defined as US Patent Nos. 6,121,203; 6,222,100; 7,232,942; and 7,807,882.

“Registered Clearfield or Clearfield Plus Crop” is defined as any seed or plant that contains a gene encoding an acetohydroxyacid synthase (AHAS) protein that confers tolerance upon such seed or plant to imidazolinone and/or sulfonylurea herbicides sold by or authorized for sale by BASF, and on which Beyond is approved for use or application by all applicable regulatory agencies.

Clearfield® Canola

Beyond is effective in controlling weeds in conservation tillage and conventional tillage production systems. Beyond can be applied early postemergence in Clearfield canola but before the bloom stage. Use Rate

Apply Beyond postemergence at 4 fl ozs/acre (0.031 lb ae imazamox/acre). At this rate, 1 gallon of Beyond will treat 32 acres of Clearfield canola. Use of a soil-applied grass herbicide is recommended before Beyond application. An adjuvant and nitrogen fertilizer MUST be added to the spray solution for optimum weed control. See Adjuvants section under Mixing Instructions for specific instructions.

Clearfield Canola Restrictions and Limitations

• DO NOT apply more than 4 fl ozs/acre Beyond (0.031 lb ae imazamox/acre) in Clearfield canola per year.

Specific Weed Problems

Canada thistle. For enhanced activity on Canada thistle, add Stinger® herbicide to the tank mix. Apply to Canada thistle in the rosette stage.
Beyond® herbicide is effective in controlling weeds in conservation tillage and conventional tillage production systems. Beyond can be applied early postemergence in Clearfield lentil (imidazolinone-tolerant lentil) varieties. Apply only on selected lentil varieties labeled "Clearfield" and warranted by the seed supplier to possess tolerance to direct application of Beyond. DO NOT apply Beyond to lentil varieties that lack resistance/tolerance to Beyond. Contact your seed supplier, chemical dealer, or BASF to obtain information regarding Clearfield lentil varieties.

Apply Beyond early postemergence when weeds are actively growing and before broadleaf weeds exceed a height of 3 inches and grass weeds exceed 4 to 5 leaves (unless otherwise indicated, refer to Weeds Controlled section for specific weed sizes). Under cold temperature conditions (less than 50° F maximum daytime temperature), weed control may be less than optimal. Apply when the majority of weeds are at the specified growth stage. When adequate soil moisture is present, Beyond will provide residual activity of susceptible germinating weeds; activity on established weeds will depend on weed species and location of its root system in the soil.

Occasionally, reduction in plant height or temporary yellowing of crop plants may occur following Beyond application. These effects can be more pronounced if crops are growing under stressful environmental conditions. These effects are temporary. Normal growth and appearance should resume within 1 to 2 weeks.

Application Timing
For best weed control and to provide the highest crop competitive advantage, apply Beyond to actively growing Clearfield lentil. Plant a locally adapted Clearfield lentil variety at the normal seeding rate for your geography. Apply Beyond to Clearfield lentils from the 2-leaf stage to before flower bud formation, and before weeds exceed maximum size limits. Refer to Weeds Controlled section for specific weed sizes.

Use Rate
Apply Beyond postemergence at 4 to 6 fl ozs/acre (0.031 to 0.047 lb ae imazamox/acre). At this rate, 1 gallon of Beyond will treat 21.3 to 32 acres of Clearfield lentils. Use of a soil-applied grass herbicide like Prowl® 3.3 EC herbicide or Prowl® H2O herbicide is recommended before Beyond application. Nonionic surfactant AND nitrogen-based fertilizer MUST be added to the spray solution for optimum weed control. See Adjuvants section under Mixing Instructions for specific instructions.

DO NOT use COC or MSO with Beyond on Clearfield lentil.

Clearfield Lentil Restrictions and Limitations
DO NOT apply more than 6 fl ozs Beyond/acre (0.047 lb ae imazamox/acre) in Clearfield lentils per year.

Clearfield® Rice
For use only on Clearfield rice varieties and hybrids (not less than 75% hybrid seed). Not for use in California.

Apply Beyond only on selected rice varieties or hybrids (not less than 75% hybrid seed) labeled “Clearfield” and warranted by the seed company to possess tolerance to direct application of certain imidazolinone herbicides. DO NOT apply Beyond to rice varieties or hybrids (less than 75% hybrid seed) that lack tolerance to imidazolinone herbicides because Beyond will kill all non-imidazolinone-tolerant varieties or hybrids.

Contact your seed supplier, chemical dealer or BASF to obtain information regarding imidazolinone-tolerant rice varieties.
Adhere to Part 201.11a Hybrid of the Federal Seed Act Regulations, labeling agricultural seeds. If any one kind or kind and variety of seed present in excess of 5 percent is “hybrid” seed, it shall be designated “hybrid” on the label. The percentage that is hybrid shall be at least 95 percent of the percentage of pure seed shown unless the percentage of pure seed which is hybrid seed is shown separately. If two or more kinds or varieties are present in excess of 5 percent and are named on the label, each that is hybrid shall be designated as hybrid on the label. No one kind or variety of seed shall be labeled hybrid if the pure seed contains less than 75 percent hybrid seed.

Beyond® herbicide is effective in controlling weeds in water-seeded and dry/drill-seeded rice. Beyond can be applied postemergence to Clearfield® rice. Beyond can only be applied following at least one application of Newpath® herbicide or Clearpath® herbicide.

Apply Beyond early postemergence when weeds are actively growing and before broadleaf weeds exceed 4 to 5 leaves (unless otherwise indicated, refer to Weeds Controlled (Clearfield® Rice) tables for specific weed sizes). Apply when the majority of weeds are at the specified growth stage. When a mixture of grass and broadleaf weeds are present, time application to grass weeds for optimum control.

Unusually cool temperatures (50° F or less) reduce photosynthesis and transpiration and, thus, reduce uptake, translocation, and efficacy of Beyond in weeds. Delaying a Beyond application for 48 hours from the time temperature increases to above 50° F, if air temperature has been below 50° F for 10 or more hours, will improve weed control and reduce crop response.

Occasionally, reduction in plant height or temporary yellowing of crop plants may occur following Beyond application. These effects can be more pronounced in spray overlap areas and/or if crops are growing under stressful environmental conditions. These effects are temporary. Normal growth and appearance should resume in 1 to 2 weeks.

**Application Timing**

Apply Beyond to Clearfield rice at the following crop stages of growth; refer to Weeds Controlled (Clearfield® Rice) tables for specific weed sizes.

- **Clearfield Rice Varieties** - 4-leaf to rice panicle initiation (green ring) plus 14 days
- **Clearfield Rice Hybrids** - 4-leaf to rice panicle initiation

DO NOT apply Beyond to Clearfield rice hybrids after panicle initiation.

**Use Rate**

Beyond can only be applied following at least one application of Newpath or Clearpath. Apply Beyond postemergence at 4 to 6 fl ozs per acre (0.031 to 0.047 lb ae imazamox/A). See Weeds Controlled (Clearfield® Rice) tables for additional details.

Crop oil concentrate MUST be added to the spray solution for optimum weed control. Add 1 gallon COC per 100 gallons of spray solution (1.0% volume/volume). See Adjuvants section under Mixing Instructions for specific instructions.

**Clearfield Rice Restrictions and Limitations**

- **DO NOT** apply more than 10 fl ozs of Beyond (0.078 lb ae imazamox/A) per year, or 6 fl ozs per application.
- **DO NOT** make more than two applications of Beyond per year.
Weeds Controlled (Clearfield® Rice)

Beyond® herbicide will control listed weeds when applied postemergence at the specified rates listed as follows.

When applied as directed in the Clearfield rice Use Rate section of this label, Beyond will suppress the following weeds:

- Alligatorweed
- Dayflower, spreading
- Ducksalad
- Eclipta
- Flatsedge, water
- Johnsongrass, rhizome
- Mexicanweed
- Nutsedge, purple
- Nutsedge, yellow
- Purple ammannia
- Redweed
- Texasweed
- Water plantain (Common arrowhead)

Specific Weed Problems

Red Rice. For red rice control, apply 5 fl ozs/A of Beyond at 14 to 21 days after making at least one application of Newpath® herbicide at 4 to 6 fl ozs/A or Clearpath® herbicide at 0.5 pound/A. If not flooded at time of application, a permanent flood should be established within 2 days following an application of Beyond.

Spray coverage is critical to achieve red rice control. If a permanent flood has been established, greater than 1/2 of the red rice plant must be above water at the time of Beyond application. If less than 1/2 of the red rice plant is above water, drop the level of the flood sufficiently to expose greater than 1/2 of the red rice plant before Beyond application.

Tank Mix Herbicides

When Beyond is used in combination with another herbicide, refer to the respective label for rates, methods, and proper timing of application; weeds controlled; restrictions; and precautions. Always use in accordance with the most restrictive label use directions and precautions.

Licensed for use on ATCC 75295, ATCC 97523, PTA-902, PTA-903, PTA-904, PTA-905, PTA-906, PTA-907, or PTA-908 rice and derivatives.
and progeny. With the purchase of this herbicide, the purchaser is granted a sublicense under claims in United States Patent Nos. 5,773,704; 5,952,553; 6,222,100; 6,274,796; 6,943,280; 7,019,196; 7,345,221; 7,399,905; 7,495,153; 7,754,947; and 7,786,360 relating to applying imazamox herbicide to fields planted with rice seed purchased in a container bearing the legend “Licensed for use on ATCC 75295, ATCC 97523, PTA-902, PTA-903, PTA-904, PTA-905, PTA-906, PTA-907, or PTA-908 rice and derivatives and progeny” in full accordance with the directions printed on this label, for the sole purposes of spraying or otherwise applying only Beyond® herbicide to fields planted with such rice seed to produce grain for use or sale only as food or feed.

Clearfield® and Clearfield® Plus Sunflower

Beyond® is effective in controlling weeds in conservation tillage and conventional tillage production systems. Beyond® can be applied early postemergence in Clearfield® or Clearfield Plus® sunflower (imidazolinone-tolerant sunflower) varieties. Apply only on selected sunflower varieties labeled “Clearfield® or Clearfield Plus®” and warranted by the seed supplier to possess tolerance to direct application of Beyond®. DO NOT apply Beyond® to sunflower varieties that lack resistance/tolerance to imidazolinone herbicides. Contact your seed supplier, chemical dealer, or BASF to obtain information regarding Clearfield® or Clearfield Plus® sunflower varieties.

Apply Beyond® early postemergence when weeds are actively growing and before broadleaf weeds exceed a height of 3 inches and grass weeds exceed 4 to 5 leaves (unless otherwise indicated, refer to Weeds Controlled section for specific weed sizes). Under cold temperature conditions (less than 50° F maximum daytime temperature), weed control may be less than optimal. Apply when the majority of weeds are at the specified growth stage.

When adequate soil moisture is present, Beyond® will provide residual activity of susceptible germinating weeds. Activity on established weeds depends on weed species and location of its root system in the soil.

Occasionally, reduction in plant height or temporary yellowing of crop plants may occur following Beyond® application. These effects can be more pronounced if crops are growing under stressful environmental conditions. These effects are temporary. Normal growth and appearance should resume within 1 to 2 weeks.

Application Timing

For best weed control and to provide the highest crop competitive advantage, apply Beyond® to actively growing Clearfield® or Clearfield Plus® sunflower. Plant a locally adapted Clearfield® or Clearfield Plus® sunflower variety at the normal seeding rate for your geography. Apply Beyond® to Clearfield® or Clearfield Plus® sunflower after the first pair of true leaves has unfolded and up to, and including, when the fourth pair of leaves is unfolded (2-leaf to 8-leaf stage); refer to Weeds Controlled section for specific weed sizes.

Use Rate

DO NOT apply more than 4 fl ozs Beyond®/acre in Clearfield Plus® sunflower in California per year.

For use in Clearfield® sunflower, apply Beyond® postemergence at 4 fl ozs/acre (0.031 lb ae imazamox/acre). At this rate, 1 gallon of Beyond® will treat 32 acres of Clearfield® sunflower.

For use in Clearfield Plus® sunflower, apply Beyond® postemergence at 4 to 6 fl ozs/acre (0.031 to 0.047 lb ae imazamox/acre). At this rate, 1 gallon of Beyond® will treat 21.3 to 32 acres of Clearfield Plus® sunflower.

Use of a soil-applied grass herbicide like Prowl® 3.3 EC herbicide or Prowl® H2O herbicide is recommended before Beyond® application.
Nonionic surfactant AND nitrogen-based fertilizer MUST be added to the spray solution for optimum weed control. See Adjuvants section under Mixing Instructions for specific instructions.

Clearfield® Plus Sunflower. For improved weed control, crop oil concentrate or methylated seed oil may be substituted for nonionic surfactant. Use of COC or MSO in place of NIS in Clearfield Plus sunflower may increase crop response. When Beyond® herbicide is tank mixed with another herbicide, using COC or MSO in Clearfield Plus sunflower is only recommended when a Beyond tank mix partner allows use of COC or MSO.

DO NOT use COC or MSO with Beyond on Clearfield® sunflower.

Clearfield and Clearfield Plus Sunflower Restrictions and Limitations

• DO NOT apply more than 4 fl ozs Beyond/acre (0.031 lb ae imazamox/acre) in Clearfield Plus sunflower in California per year.
• DO NOT apply more than 4 fl ozs Beyond/acre (0.031 lb ae imazamox/acre) in Clearfield sunflower per year.
• DO NOT apply more than 6 fl ozs Beyond/acre (0.047 lb ae imazamox/acre) in Clearfield Plus sunflower per year.

Clearfield® and Clearfield® Plus Spring Wheat

Beyond can be applied early postemergence on Clearfield or Clearfield Plus wheat (imidazolinone-tolerant wheat) varieties. Apply on select spring wheat varieties labeled “Clearfield or Clearfield Plus” and warranted by the seed supplier to possess tolerance to direct application of certain imidazolinone herbicides. DO NOT apply Beyond to wheat varieties that lack resistance/tolerance to imidazolinone herbicides. Contact your seed supplier, chemical dealer, or BASF to obtain information regarding Clearfield or Clearfield Plus wheat varieties.

Apply Beyond early postemergence when weeds are actively growing and before broadleaf weeds exceed a height of 3 inches and grass weeds exceed 4 to 5 leaves (unless otherwise indicated). Under cold temperature conditions (less than 40°F maximum daytime temperature), weed control may be less than optimal. A thin stand of wheat may result in unacceptable weed control.

Beyond is effective in controlling weeds in conservation tillage and conventional tillage production systems. Delay application until the majority of weeds are at the specified growth stage. When a mixture of grass and broadleaf weeds are present, time application to grass weeds for optimum control.

When adequate soil moisture is present, Beyond will provide residual activity of susceptible germinating weeds. Activity on established weeds depends on weed species and location of its root system in the soil. Occasionally, reduction in plant height or temporary yellowing of crop plants may occur following Beyond application. These effects can be more pronounced in spray overlap areas and/or if crops are growing under stressful environmental conditions (such as, but not limited to, drought, excessive moisture, improper fertility, improper varietal adaptation, poor planting conditions, etc.). To avoid possible crop injury, DO NOT apply Beyond to Clearfield or Clearfield Plus wheat when extreme cold temperatures (less than 40°F maximum daytime temperature) are expected within 1 week of application. Crop response associated with stress conditions and overlaps is the responsibility of the user.

Application Timing

Weed control is optimized when Beyond is applied to actively growing wheat. Plant a locally adapted Clearfield or Clearfield Plus variety at the normal seeding rate for your geography. Apply Beyond to Clearfield or Clearfield Plus spring wheat after tiller initiation has begun and before the jointing stage of growth (and when the weeds are at the appropriate size). See Weeds Controlled section for specific weed growth stages.
Use Rate
Apply Beyond® herbicide at 4 to 5 fl ozs/acre (0.031 to 0.039 lb ae imazamox/acre). See Weeds Controlled section for detailed use rate specifications.

Adjuvants and Spray Carrier
Nonionic surfactant AND nitrogen-based fertilizer MUST be added to the spray solution for optimum weed control.

Clearfield® Plus Spring Wheat. For improved weed control, crop oil concentrate or methylated seed oil may be substituted for nonionic surfactant. Use of COC or MSO in place of NIS in Clearfield Plus spring wheat may increase crop response. When Beyond is tank mixed with another herbicide, using COC or MSO in Clearfield Plus spring wheat is only recommended when a Beyond tank mix partner allows use of COC or MSO. See Adjuvants section under Mixing Instructions for specific instructions.

DO NOT use COC or MSO with Beyond on Clearfield® spring wheat.

Liquid Fertilizer as a Carrier. Beyond may be applied to Clearfield® or Clearfield Plus spring wheat in a water/liquid fertilizer solution with at least 50% water. Add NIS at 1 quart/100 gallons of spray solution (0.25% v/v). Some crop leaf burn from the fertilizer may occur. Use of COC, HSOC, or MSO in place of NIS may increase crop response.

Clearfield and Clearfield Plus Spring Wheat Restrictions and Limitations
• DO NOT apply more than 5 fl ozs Beyond/acre (0.039 lb ae imazamox/acre) in Clearfield or Clearfield Plus spring wheat per year.
• There are no restrictions following an application of Beyond for feeding or grazing of wheat forage and hay.

Specific Weed Problems in Clearfield and Clearfield Plus Spring Wheat
Feral rye (cereal, volunteer rye). Beyond suppresses emerged feral rye only. Apply to feral rye before the first tiller forms. When feral rye develops tillers, suppression is significantly reduced.

Italian ryegrass. Beyond suppresses emerged Italian ryegrass only. Under favorable growing conditions, ryegrass may germinate over several weeks.

Kochia. Naturally occurring ALS/AHAS-resistant biotypes of kochia are common in wheat fields. In many cases, a tank mix with Beyond will be required for acceptable control. Apply Beyond in a tank mix with a herbicide(s) labeled to control kochia (e.g. Clarity® herbicide plus 2,4-D). Apply to kochia 2-inches tall or less.

Wild buckwheat. For enhanced control of wild buckwheat, add Starane® herbicide or Clarity to the tank mix. Apply to wild buckwheat with no more than 2 true leaves.

Wild oat. Beyond controls emerged wild oats only. Under favorable growing conditions, wild oats may germinate over several weeks. Beyond does not provide residual control of wild oat.

Tank Mix Herbicides
Tank mix herbicides recommended for postemergence application of Beyond on Clearfield or Clearfield Plus wheat varieties are:
• Clarity
• Banvel® herbicide
• Bromate Advanced® herbicide (bromoxynil plus MCPA)
• Buctril® herbicide
• Curtail® M herbicide
• Starane
• 2,4-D ester
• MCPA

Limit bromoxynil applications (Bromate Advanced or Buctril) to 0.5 lb/acre active ingredient when tank mixed with Beyond.
When broadleaf herbicides are tank mixed with Beyond® herbicide, weed control, particularly grass weeds, may be reduced. ALS/AHAS enzyme-inhibiting herbicides should not be tank mixed with Beyond. Beyond tank mixes with ALS/AHAS-inhibiting herbicides may result in unacceptable crop response.

When Beyond is used in combination with another herbicide, refer to the respective label for rates, methods, and proper timing of application, weeds controlled, restrictions, and precautions. Always use in accordance with the most restrictive label use directions and precautions.

**Clearfield® and Clearfield® Plus Winter Wheat**

Beyond can be applied early postemergence on Clearfield or Clearfield Plus wheat (imidazolinone-tolerant wheat) varieties. Apply only on select-d winter wheat varieties labeled "Clearfield or Clearfield Plus" and warranted by the seed supplier to possess tolerance to direct application of certain imidazolinone herbicides. DO NOT apply Beyond to wheat varieties that lack resistance/tolerance to imidazolinone herbicides. Contact your seed supplier, chemical dealer, or BASF to obtain information regarding Clearfield or Clearfield Plus wheat varieties.

Apply Beyond early postemergence when weeds are actively growing and before broadleaf weeds exceed a height of 3 inches and grass weeds exceed 4 to 5 leaves (unless otherwise indicated). Under cold temperature conditions (less than 40° F maximum daytime temperature), weed control may be less than optimal. A thin stand of wheat may result in unacceptable weed control.

Beyond is effective in controlling weeds in conservation tillage and conventional tillage production systems. Beyond can be applied in the fall/winter or spring for winter or spring annual weed control, respectively. Delay application until the majority of weeds are at the specified growth stage. When a mixture of grass and broadleaf weeds are present, time application to grass weeds for optimum control. When adequate soil moisture is present, Beyond will provide residual activity of susceptible germinating weeds. Activity on established weeds depends on weed species and location of its root system in the soil.

Occasionally, reduction in plant height or temporary yellowing of crop plants may occur following Beyond application. These effects can be more pronounced in spray overlap areas and/or if crops are growing under stressful environmental conditions (such as, but not limited to, drought, excessive moisture, improper fertility, improper varietal adaptation, poor planting conditions, etc.). To avoid possible crop injury, DO NOT apply Beyond to Clearfield or Clearfield Plus wheat when extreme cold temperatures (less than 40° F maximum daytime temperature) are expected within 1 week of application. Crop response associated with stress conditions and overlaps is the responsibility of the user.

**Application Timing**

Weed control is optimized when Beyond is applied to actively growing wheat. Plant a locally adapted Clearfield or Clearfield Plus variety at the normal seeding rate for your geography. Apply Beyond to Clearfield or Clearfield Plus winter wheat after tiller initiation has begun and before the jointing stage of growth (and when the weeds are at the appropriate size). See **Weeds Controlled** section for specific weed growth stages.

**Use Rate**

Apply Beyond at 4 to 6 fl ozs/acre (0.031 to 0.047 lb of imazamox/acre) in Clearfield or Clearfield Plus winter wheat. See **Weeds Controlled** section for detailed use rate specifications.
Adjuvants and Spray Carrier
Nonionic surfactant AND nitrogen-based fertilizer MUST be added to the spray solution for optimum weed control. See Adjuvants section under Mixing Instructions for specific instructions.

Clearfield® Plus Winter Wheat. For improved weed control, crop oil concentrate or methylated seed oil may be substituted for nonionic surfactant. Use of COC or MSO in place of NIS in Clearfield Plus winter wheat may increase crop response. When Beyond® herbicide is tank mixed with another herbicide, using COC or MSO in Clearfield Plus winter wheat is only recommended when a Beyond tank mix partner allows use of COC or MSO.

DO NOT use COC or MSO with Beyond on Clearfield winter wheat.

Liquid Fertilizer as a Carrier. Beyond may be applied to Clearfield® or Clearfield Plus winter wheat in a water/liquid fertilizer solution with at least 50% water. Add NIS at 1 quart/100 gallons of spray solution (0.25% v/v). Some crop leaf burn from the fertilizer may occur. Use of COC, HSOC, or MSO in place of NIS may increase crop response.

Clearfield and Clearfield Plus Winter Wheat Restrictions and Limitations
- DO NOT apply more than 8 fl ozs Beyond/acre (0.062 lb imazamox/acre) in Clearfield or Clearfield Plus winter wheat per year.
- There are no restrictions following an application of Beyond for feeding or grazing of wheat forage and hay.
- Application of Beyond to weeds that have been grazed may result in reduced weed control. For optimum weed control, allow a period of 7 days between the end of grazing and Beyond application for weed regrowth to occur. Under cold conditions, wait until new growth of weeds is evident before applying Beyond in fields that have been grazed.

Specific Weed Problems in Clearfield and Clearfield Plus Winter Wheat
Beyond is most effective for grass control when applied in the fall. If summer annual broaddleaf weeds germinate in the spring (following a fall application of Beyond), a broadleaf herbicide may need to be applied. If the Beyond application is made in the spring, the broadleaf herbicide may be tank mixed with Beyond.

For improved control of grass weeds, such as feral rye (suppression), Italian ryegrass (suppression), cheat and downy brome, use higher rates of nitrogen fertilizer (up to 50% of the spray solution). Higher rates of nitrogen can improve weed control with Beyond, especially under drought stress conditions, but additional crop response may be observed. AMS/nitrogen substitutes are not recommended when targeting hard-to-control weeds.

Feral rye (cereal, volunteer rye). Beyond suppresses emerged feral rye only. Apply to feral rye before the first tiller forms. When feral rye develops tillers, suppression is significantly reduced. If feral rye germinates in the fall, an application of Beyond in the fall will provide the best suppression. If feral rye germinates following an application of Beyond in the fall, a spring application may be necessary for suppression of subsequent germination flushes. Use two applications of Beyond for the best suppression of feral rye.

Italian ryegrass. Beyond suppresses emerged Italian ryegrass only. Under favorable growing conditions, ryegrass may germinate over several weeks (especially in the southern US). Beyond does not provide residual control of Italian ryegrass. Because of the potential for multiple germination flushes, Italian ryegrass suppression in New Mexico, Oklahoma, and Texas may not be satisfactory. Optimum application timing is to ryegrass with 3 to
4 leaves and before the first tiller. Suppression is reduced when tillers develop. In the Pacific Northwest, a spring application of 6 fl ozs/A of Beyond® herbicide is specified for the most consistent suppression. If Italian ryegrass germinates following a fall application, a spring application may be necessary. Apply the higher specified rate when Italian ryegrass is at the maximum specified size, or to heavy grass weed populations.

Kochia. Naturally occurring ALS/AHAS-resistant biotypes of kochia are common in wheat fields. In many cases, a tank mix with Beyond will be required for control. If Beyond is applied in the spring, apply Beyond in a tank mix with a herbicide(s) labeled to control kochia (e.g. Clarity® herbicide plus 2,4-D). Apply to kochia 2-inches tall or less.

Wild buckwheat. For enhanced control of wild buckwheat, add Starane® herbicide or Clarity to the tank mix. Apply to wild buckwheat with no more than 2 true leaves.

Wild oat. Beyond controls emerged wild oats only. Under favorable growing conditions, wild oats may germinate over several weeks (especially in the southern US). Beyond does not provide residual control of wild oat. Because of the potential for multiple germination flushes, wild oat control in New Mexico, Oklahoma, and Texas may not be satisfactory.

Tank Mix Herbicides
Tank mix herbicides recommended for postemergence application of Beyond on Clearfield® or Clearfield® Plus wheat varieties are:
- Clarity
- Banvel® herbicide
- Bromate Advanced® herbicide (bromoxynil plus MCPA)
- Buctril® herbicide
- Curtail® M herbicide
- Starane
- 2,4-D ester
- MCPA

Limit bromoxynil applications (Bromate Advanced or Buctril) to 0.5 lb/acre active ingredient when tank mixed with Beyond.

When broadleaf herbicides are tank mixed with Beyond, weed control, particularly grass weeds, may be reduced. ALS/AHAS enzyme-inhibiting herbicides should not be tank mixed with Beyond. Beyond tank mixes with ALS/AHAS-inhibiting herbicides may result in unacceptable crop response.

When Beyond is used in combination with another herbicide, refer to the respective label for rates, methods, and proper timing of application, weeds controlled, restrictions, and precautions. Always use in accordance with the most restrictive label use directions and precautions.

Rotational Crop Restrictions
Rotational crops may be planted after applying the specified rate of Beyond in Region 1 and Region 2, as indicated on the map.

- Region 1 - States and parts of states WEST of US Highway 83 (Arizona, California, Colorado, Hawaii, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, Wyoming, and western parts of Kansas, Nebraska, North Dakota, Oklahoma, South Dakota, and Texas)
- Region 2 - States and parts of states EAST of US Highway 83 (includes the eastern parts of Kansas, Nebraska, North Dakota, Oklahoma, South Dakota, and Texas, and the states east of these states)

Refer to the following tables for rotational intervals for planting following Beyond application.

In Region 2, sugar beets and table beets can be planted 18 months following an application of Beyond if the soil pH is uniformly 6.2 or greater. If the soil pH is less than 6.2, the rotational interval is 26 months. Sugar beet yields can be reduced when grown in soil conditions with a pH less than 6.2. If the soil is limed to adjust the soil pH, apply the lime at least 18 months before planting sugar beet or other rotational crops under the 18-month rotational interval.

For sugar beets grown in parts of Nebraska west of US Highway 83, and Platte, Goshen, and Laramie counties in Wyoming, follow the sugar beet rotational crop restrictions for Region 2 for sprinkler-irrigated fields only. If fields are dryland, flood or furrow irrigated, follow restrictions for Region 1. A minimum of 10 inches of overhead irrigation must be applied each season to qualify for Region 2 guidelines.

Planting non-Clearfield spring or winter wheat in areas receiving less than 10 inches of precipitation from the time of Beyond application up until wheat planting may result in wheat injury. The possibility of injury increases if less than normal precipitation occurs from the time of application to planting and/or within the first 2 months after Beyond application.

In Region 1 and Region 2, non-Clearfield lentil may be planted 9 months following an application of Beyond if no more than 5 fl oz/A of Beyond has been applied and the soil pH is uniformly greater than 6.2.

### Barley Rotational Interval based on pH, Moisture, and Tillage

</tbody>
</table>
When taking soil samples to determine soil pH, use a grid sampling technique, sampling to a depth of 3 to 4 inches.

\[ R+I = \text{Rainfall and overhead irrigation from the time of Beyond® herbicide application up until time of barley, potato, or non-Clearfield wheat planting. Does not include furrow or flood irrigation.} \]

If the rainfall or pH requirements are not fully met, and barley or non-Clearfield wheat is planted before the specified rotation interval, injury may be reduced by tillage, such as deep disking (greater than 6 inches deep) after crop harvest but before November 1.

The possibility of injury to barley or non-Clearfield wheat planted the next season increases if less than normal precipitation occurs from time of application to planting and/or within the first two months after Beyond application.

**Furrow-irrigated and Flood-irrigated Crops**

Following harvest of furrow-irrigated or flood-irrigated crops, thoroughly mix soil by plowing or deep disking to minimize the potential for herbicide carryover to the following crop.

Use of Beyond in accordance with label directions is expected to result in normal growth of rotational crops in most situations; however, various environmental and agronomic factors, such as arid conditions, make it impossible to eliminate all risks associated with use of this product and, therefore, rotational crop injury is always possible.

### Non-Clearfield® Wheat Rotational Interval based on pH and Moisture

<table>
<thead>
<tr>
<th>Washington and selected counties in Idaho* and Oregon**</th>
<th>pH and Rainfall requirements</th>
<th>&lt;16 inches R+I OR pH &lt;6.2</th>
<th>16 months</th>
<th>&gt;16 inches R+I AND pH &gt;6.2</th>
<th>3 months</th>
</tr>
</thead>
</table>

*Selected counties in Idaho - Benewah, Bonner, Boundary, Clearwater, Idaho, Kootenai, Latah, Lewis, Nez Perce, and Shoshone

**Selected counties in Oregon - All but Malheur

When taking soil samples to determine soil pH, use a grid sampling technique, sampling to a depth of 3 to 4 inches.

\[ R+I = \text{Rainfall and overhead irrigation from the time of Beyond® herbicide application up until time of barley, potato, or non-Clearfield wheat planting. Does not include furrow or flood irrigation.} \]

If the rainfall or pH requirements are not fully met, and barley or non-Clearfield wheat is planted before the specified rotation interval, injury may be reduced by tillage, such as deep disking (greater than 6 inches deep) after crop harvest but before November 1.

The possibility of injury to barley or non-Clearfield wheat planted the next season increases if less than normal precipitation occurs from time of application to planting and/or within the first two months after Beyond application.

**Furrow-irrigated and Flood-irrigated Crops**

Following harvest of furrow-irrigated or flood-irrigated crops, thoroughly mix soil by plowing or deep disking to minimize the potential for herbicide carryover to the following crop.

Use of Beyond in accordance with label directions is expected to result in normal growth of rotational crops in most situations; however, various environmental and agronomic factors, such as arid conditions, make it impossible to eliminate all risks associated with use of this product and, therefore, rotational crop injury is always possible.
Use Restrictions and Precautions

In the event of a crop loss due to weather, dry beans, dry peas, Clearfield® canola, Clearfield® corn, Clearfield® lentil, Clearfield® and Clearfield® Plus sunflower, Clearfield® and Clearfield® Plus wheat, edamame, peas (English), lima beans (succulent), snap beans, or soybeans can be replanted. **DO NOT** make an additional application of Beyond® herbicide.

Application of products containing chlorimuron ethyl (Canopy® herbicide), metsulfuron-methyl (Harmony® Extra herbicide), imazaquin (Scepter® 70 DG herbicide), or imazethapyr (Pursuit® herbicide, Pursuit® Plus EC herbicide) the same year as Beyond may increase the risk of injury to sensitive rotational crops. Consult all pertinent labels for use of these products in combinations.

If arid conditions occur during the year of application, rotational crop injury may occur.
Uses with Other Products
(Tank Mixes)
If this product is used in combination with any other product except as specifically instructed in writing by BASF, then to the extent consistent with applicable law, BASF shall have no liability for any loss, damage or injury arising out of its use in any such combination not so specifically specified. If used in combination as instructed by BASF, to the extent consistent with applicable law, the liability of BASF shall in no manner extend to any damage, loss or injury not directly caused by the inclusion of the BASF product in such combination use, and in any event, to the extent consistent with applicable law, shall be limited to return of the amount of the purchase price of the BASF product.
For use only on Clearfield® canola, Clearfield lentil, Clearfield rice, Clearfield and Clearfield® Plus sunflower, and Clearfield and Clearfield Plus wheat

Active Ingredient:
ammonium salt of imazamox: 2-[4,5-dihydro-4-methyl-4-(1-methylethyl)-5-oxo-1H-imidazol-2-yl]-5-(methoxymethyl)-3-pyridinecarboxylic acid* ........................... 12.1%

Other Ingredients:.................................... 87.9%

Total:.......................................................... 100.0%

* Equivalent to 11.4% 2-[4,5-dihydro-4-methyl-4-(1-methylethyl)-5-oxo-1H-imidazol-2-yl]-5-(methoxymethyl)-3-pyridinecarboxylic acid

1 gallon contains 1.0 pound of active ingredient as the free acid.

KEEP OUT OF REACH OF CHILDREN

CAUTION/PRECAUCION

Precautionary Statements: Hazards to Humans and Domestic Animals: CAUTION. Harmful if absorbed through skin or inhaled. Avoid breathing spray mist. Avoid contact with skin, eyes, or clothing.

FIRST AID: If on skin or clothing: Take off contaminated clothing. Rinse skin immediately with plenty of water for 15 to 20 minutes. Call a poison control center or doctor for treatment advice. If in eyes: Hold eyes open and rinse slowly and gently with water for 15 to 20 minutes. Remove contact lenses, if present, after first 5 minutes; then continue rinsing eyes. Call a poison control center or doctor for treatment advice. If inhaled: Move person to fresh air. If person is not breathing, call 911 or an ambulance; then give artificial respiration, preferably mouth to mouth if possible. Call a poison control center or doctor for further treatment advice.

HOTLINE NUMBER: Have the product container or label with you when calling a poison control center or doctor or going for treatment. You may also contact BASF Corporation for emergency medical treatment information; 1-800-832-HELP (4357).

Environmental Hazards: This pesticide may be hazardous to plants outside the treated area. DO NOT apply directly to water, or to areas where surface water is present, or to intertidal areas below the mean high water mark except as directed in this label. Off-site movement from spray drift, volatilization, and runoff may be hazardous to neighboring crops and vegetative habitat used for food and cover by wildlife and aquatic organisms. DO NOT contaminate water when disposing of equipment washwater or rinseate.

STORAGE AND DISPOSAL:

DO NOT contaminate water, food, or feed by storage or disposal. Pesticide Storage: KEEP FROM FREEZING. DO NOT store below 32° F. Pesticide Disposal: Wastes resulting from the use of this product must be disposed of on-site or at an approved waste disposal facility. Container Handling: Nonrefillable Container. DO NOT reuse or refill this container. Triple rinse or pressure rinse container (or equivalent) promptly after emptying; then offer for recycling, if available, or reconditioning, if appropriate, or puncture and dispose of in a sanitary landfill, or by incineration, or by other procedures approved by state and local authorities. See attached booklet for complete container handling directions including triple rinsing and pressure rinsing instructions.
