ATTENTION: VENTED CAP MAY LEAK WHEN TIPPED.
WILL DAMAGE MATERIALS UPON CONTACT. TRANSPORT IN BLOCKED, UPRIGHT POSITION IN TRUNK ONLY.
ENSURE CAP IS TIGHT BEFORE LEAVING STORE. KEEP BOTTLE UPRIGHT AND TIGHTLY CAPPED AT ALL TIMES.

ACTIVE INGREDIENT:
SODIUM HYPOCHLORITE: 12.5%
OTHER INGREDIENTS: 87.5%
TOTAL: 100.0%
SODIUM HYPOCHLORITE 1.25 POUNDS PER GALLON

CHLORINATION LIQUID FOR
POOLS & SPAS

KEEP OUT OF REACH OF CHILDREN

DANGER

FIRST AID: Call a poison control center (1-888-222-1222) or doctor immediately for treatment advice. Have the product container or label with you when you call a poison control center, or when going for treatment.
IF IN EYES: Hold eye open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye. IF ON SKIN: Take off contaminated clothing. Rinse skin immediately with plenty of water for 15-20 minutes. IF SWALLOWED: Have person sip a glass of water if able to swallow. Do not induce vomiting unless told to do so by the poison control center or doctor. Do not give anything by mouth to an unconscious person.
NOTE TO PHYSICIAN: Probable mucosal damage may contraindicate the use of gastric lavage. See back panel for additional precautions.

NET CONTENTS 128 FL OZ (1 GAL) 3.79 L

6/22/10
ATTENTION: VENTED CAP

DIRECTIONS FOR USE
It is a violation of federal law to use this product in a manner inconsistent with its labeling.
NOTE: This product degrades with age. Use a chlorine test kit and increase dosage, as necessary, to obtain the required level of available chlorine.

SWIMMING POOL WATER DISINFECTION:
- For a new pool or spring start-up, superchlorinate with 52 to 104 oz. of product for each 10,000 gallons of water to yield 5 to 10 ppm available chlorine by weight. Check the level of available chlorine with a test kit. Adjust and maintain pool water pH to between 7.2 to 7.6.
- Adjust and maintain the alkalinity of the pool to between 50 to 100 ppm.
- To maintain the pool, add manually or by a feeder device 11 oz. of this product for each 10,000 gallons of water to yield an available chlorine residual between 0.8 to 1.0 ppm by weight. Stabilized pools should maintain a residual of 1.0 to 1.5 ppm available chlorine. Test the pH, available chlorine residual and alkalinity of the water frequently with appropriate test kits. Frequency of water treatment will depend upon temperature and number of swimmers.
- Every 7 days, or as necessary, superchlorinate the pool with 52 to 104 oz. of product for each 10,000 gallons of water to yield 5 to 10 ppm available chlorine by weight. Check the level of available chlorine with a test kit. Re-entry into treated pools is prohibited at levels above 4 ppm due to risk of bodily harm.
- At the end of the swimming pool season or when water is to be drained from the pool, chlorine must be allowed to dissipate from treated pool water before discharge. Do not chlorinate the pool within 24 hours prior to discharge.

WINTERIZING POOLS:
- While water is still clear & clean, apply 3 oz. of product per 1000 gallons, while filter is running, to obtain a 3 ppm available chlorine residual, as determined by a suitable test kit. Cover pool, prepare heater, filter and heater components for winter by following manufacturers' instructions.

SPAS/HOT-TUBS:
- Apply 5 oz. of product per 1000 gallons of water to obtain a free available chlorine concentration of 5 ppm, as determined by a suitable chlorine test kit. Adjust and maintain pool water pH to between 7.2 and 7.8. Some oils, lotions, fragrances, cleaners, etc., may cause foaming or cloudy water as well as reduce the efficiency of the product.
- To maintain the water, apply 5 oz. of product per 1000 gallons of water over the surface to maintain a chlorine concentration of 5 ppm. Re-entry into treated Spa is prohibited at levels above 5 ppm due to risk of bodily harm.
- After each use, shock treat with 8 oz. of this product per 500 gallons of water to control odor and algae.
- During extended periods of disuse, add 3 oz. of product daily per 1000 gallons of water to maintain a 3 ppm chlorine concentration.

HYDROTHERAPY TANKS:
- Add 1 oz. of this product per 1000 gallons of water to obtain a chlorine residual of 1 ppm, as determined by a suitable chlorine test kit. Pool should not be entered until the chlorine residual is below 3 ppm. Adjust and maintain the water pH to between 7.2 and 7.6. Operate pool filter continuously. Drain pool weekly, and clean before refilling.
MAY LEAK WHEN TIPPED.

WILL DAMAGE MATERIALS UPON CONTACT.
TRANSPORT IN BLOCKED, UPRIGHT POSITION IN TRUNK ONLY.
ENSURE CAP IS TIGHT BEFORE LEAVING STORE.
KEEP BOTTLE UPRIGHT AND TIGHTLY CAPPED AT ALL TIMES.

PRECAUTIONARY STATEMENTS
Hazards to humans and domestic animals
DANGER: Corrosive, may cause severe skin and eye irritation or chemical burns to broken skin. Causes eye damage. Wear safety glasses or goggles and rubber gloves when handling this product. Wash after handling. Avoid breathing vapors. Vacate poorly ventilated areas as soon as possible. Do not return until strong odors have dissipated.

Environmental Hazards
This product is toxic to fish and aquatic organisms. Do not discharge this product into lakes, streams, ponds, estuaries, oceans or public waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge. Do not discharge effluent containing this product to sewer systems without previously notifying the local sewage treatment plant authority. For guidance contact your State Water Board or Regional Office of the EPA.

Physical and Chemical Hazards
STRONG OXIDIZING AGENT: Mix only with water according to label directions. Mixing this product with chemicals (e.g. ammonia, acids, detergents, etc.) or organic matter (e.g. urine, feces, etc.) will release chlorine gas which is irritating to eyes, lungs and mucous membranes.

STORAGE AND DISPOSAL
Do not contaminate food or feed by storage, disposal or cleaning of equipment. Store this product in a cool, dry area away from direct sunlight and heat to avoid deterioration. In case of spill, flood area with large quantities of water. Product rinsates that cannot be used should be diluted with water before disposal in a sanitary sewer. CONTAINER HANDLING: Non-refillable container. Do not reuse or refill this container. Offer for recycling if available or place in trash collection.

Manufactured by: KIK International Inc., 33 Macintosh Blvd., Concord, Ontario, Canada L4K 4L5

EPA REG NO.: 70271-20001

DIRECTIONS FOR USE
It is a violation of federal law to use this product in a manner inconsistent with its labeling.
NOTE: This product degrades with age. Use a chlorine test kit and increase dosage, as necessary, to obtain the required level of available chlorine.

SWIMMING POOL WATER DISINFECT:
• For a new pool or spring start-up, superchlorinate with 52 to 104 oz. of product for each 10,000 gallons of water to yield 5 to 10 ppb available chlorine by weight. Check the level of available chlorine with a test kit. Adjust and maintain pool water pH levels between 7.2-7.6. Adjust and maintain the alkalinity of the pool to be between 50 to 150 ppm.
• To maintain the pool, add manually or by a feeder device 11 oz. of this product for each 10,000 gallons of water to yield an available chlorine residual between 0.6 to 1.0 ppm by weight. Stabilized pools should maintain a residual of 1.3 to 1.5 ppm available chlorine. Test the pH, available chlorine residual and alkalinity of the water frequently with appropriate test kits. Frequency of water treatment will depend upon temperature and number of swimmers.
• Every 7 days, or as necessary, superchlorinate the pool with 52 to 104 oz. of product for each 10,000 gallons of water to yield 3 to 6 ppm available chlorine by weight. Check the level of available chlorine with a test kit. Re-entry into treated pools is prohibited at levels above 4 ppm due to risk of bodily harm.
• At the end of the swimming pool season or when water is to be drained from the pool, chlorine must be allowed to dissipate from treated pool water before discharge. Do not chlorinate the pool within 24 hours prior to discharge.

WINTERIZING POOLS:
• While water is still clear & clean, apply 3 oz. of product per 1000 gallons, while filter is running, to obtain a 3 ppm available chlorine residual, as determined by a suitable test kit. Cover pool, prepare heater, filter and heater components for winter by following manufacturer's instructions.

SPAS/HOT TUBS:
• Apply 0.6 oz. of product per 1000 gallons of water to obtain a free available chlorine concentration of 5 ppm, as determined by a suitable chlorine test kit. Adjust and maintain pool water pH levels between 7.2 and 7.6. Some oils, lotions, fragrances, cleaners, etc. may cause foaming or cloudy water as well as reduce the efficiency of the product.
• To maintain the water, apply 0.6 oz. of product per 1000 gallons of water over the surface to maintain a chlorine concentration of 5 ppm. Re-entry into treated Spa is prohibited at levels above 5 ppm due to risk of bodily harm.
• After each use, shock treat with 8 oz. of this product per 500 gallons of water to control odor and algae.
• During extended periods of disuse, add 3 oz. of product daily per 1000 gallons of water to maintain a 3 ppm chlorine concentration.

HYDROTHERAPY TANKS:
• Add 1 oz. of this product per 1000 gallons of water to obtain a chlorine residual of 1 ppm, as determined by a suitable chlorine test kit. Pool should not be entered until the chlorine residual is below 3 ppm. Adjust and maintain the water pH levels between 7.2 and 7.6. Operate pool filter continuously. Drain pool weekly, and clean before refilling.

DIRECTIONS FOR USE

It is a violation of federal law to use this product in a manner inconsistent with its labeling. NOTE: This product degrades with age. Use a chlorine test kit and immediate dosage, as necessary, to obtain the required level of available chlorine.

SHOCKING POOL WATER DISINFECTANT:

- For a new pool or shock-shock, shock-circulate with 50 to 100 oz. of product for each 10,000 gallons of water to yield 10 to 15 ppm available chlorine by weight.
- Check the level of available chlorine with a test kit. Adjust and maintain pool water pH to between 7.2 and 7.8. Adjust and maintain the total alkalinity of the pool to between 100 to 150 ppm.
- To maintain the pool, add manually or by a timer device 1 oz. of this product for each 10,000 gallons of water to yield an available chlorine residual between 5.0 to 10.0 ppm by weight. Involved pools should maintain a residual of 1.5 to 3.0 ppm available chlorine. Test the pH, available chlorine residual andinity of the water frequently with approved test kits.
- Frequency of water treatment will depend upon temperature and number of swimmers.
- Every 7 days, or as necessary, re-shock the pool with 50 to 100 oz. of product for each 10,000 gallons of water to yield 10 to 15 ppm available chlorine by weight. Check the level of available chlorine with a test kit. Re-entry into treated pools is permitted at levels above 4 ppm but not below 1 ppm by weight.
- At the end of the treatment period allow or when water is to be drained from the pool, chlorinate to allow for proper treatment and washing.

WATERFILMING POOLS:

- While water is still clear A clean, apply 10 oz. of product per 10,000 gallons, while filter is running, to obtain a ppm available chlorine residual, as determined for a suitable test kit. Check pool, proper heaters, filters and heater components for water to following manufacturers' instructions.

SPECIAL-TREATMENT:

- Add 5-10 oz. of product per 10,000 gallons of water at a time to obtain a ppm available chlorine concentration of 5 ppm, as determined for a suitable test kit. Adjust and maintain pool water pH to between 7.2 and 7.8. Some alga, bitters, fingerprinters, closures, etc., may cause staining or chalky water as well as reduce the efficiency of the product.
- To maintain the water, apply 1-2 oz. of product per 10,000 gallons of water over the season to maintain a chlorine concentration of 5 ppm. The entry into treated pools is permitted at levels above 4 ppm but not below 1 ppm by weight.
- After each use, shock treat with 1 oz. of this product per 1000 gallons of water to control algae.
- During extended periods of closure, add 3 oz. of product every 1000 gallons of water to maintain a 15 ppm chlorine concentration.

HYDROCOLLAR TANKS:

- Add 5-10 oz. of this product per 10,000 gallons of water to obtain a chlorine residual of 1 ppm, as determined by a reliable chlorine test kit. Pool should not be entered until the chlorine residual is lowered 3 ppm. Adjust and maintain the water pH to between 7.2 and 7.8. Operate pool filter continuously, drink pool water, and chlorinate before entry.
