This Product May Only be Used Inside and Within 100 Feet of Man-made Structures

Kills Anticoagulant Resistant Norway Rats, Roof Rats & House Mice

Palatable, All-Weather Formula

Photo is not representative of a label-consistent bait placement

KILLS RATS, MICE & MEADOW VOLES*

ACTIVE INGREDIENT: Bromethalin (CAS #63333-35-7): 0.01%
OTHER INGREDIENTS‡: 99.99%
TOTAL 100.00%
‡Contains Denatonium Benzoate

4 lbs (1.8 kg)

*Not permitted for use against the following species in California: Cotton rat, Eastern harvest mouse, Golden mouse, Polynesian rat, Meadow vole, White-throated woodrat, Southern plains woodrat, and Mexican woodrat

KEEP OUT OF REACH OF CHILDREN CAUTION

See back panels for First Aid and additional precautionary statements.

**First Aid**

**Have label with you when obtaining treatment advice.**

**If swallowed:**
- Call a poison control center, doctor, or 1-877-606-2844 immediately for treatment advice.
- Have person sip a glass of water if able to swallow.
- Do not induce vomiting unless told to do so by the poison control center or doctor.

**If on skin:**
- Wash with plenty of soap and water.

**Directions for Use**

This product may only be used to control the following rodent pests in and around man-made structures where children, pets, non-target mammals or birds may have access to the bait placement location.

**Bait Stations**

Bait stations are mandatory for outdoor, above-ground use. Tamper-resistant bait stations must be used.

**Important:** Do not expose children, pets, or non-target animals to rodenticides. To prevent exposure:
- 1. Store unused product out of reach of children and pets.
- 2. Apply bait in locations out of reach of children, pets, domestic animals and non-target wildlife, or in tamper-resistant bait stations.
- 3. These stations must be resistant to destruction by dogs and by children under six years of age, and must be used in a manner that prevents such children from reaching into bait compartments and obtaining bait. If bait can be shaken from bait stations when they are filled, units must be secured or otherwise immobilized. Stronger bait stations are needed in areas open to public access, such as parks or other potentially destructive animals, or in areas prone to vandalism.
- 4. Dispose of product container and unused, spilled or unscreened bait as specified on this label.

**Ball Stations**

Ball stations are mandatory for outdoor, above-ground use. Tamper-resistant bait stations must be used whenever children, pets, non-target mammals or birds may have access to the bait placement location.

**Use Restrictions:** This product may only be used to control the following rodents in and around man-made structures: House mouse (Mus musculus), Norway rat (Rattus norvegicus), Roof rat (Rattus rattus), Cotton rat (Sigmodon hispidus), Eastern harvest mouse (Reithrodontomys humulis), Golden mouse (Octodon degus), Polynesian rat (Neotoma polynesiaca), Southern plains woodrat (Neotoma micropus) and Mexican woodrat (Neotoma mexicana). This product must not be used in and around man-made structures or buildings on or in any child-accessible or pet-accessible area. This product must not be used to control raccoons, opossums, skunks, or other non-target mammals in and around man-made structures or buildings on or in child-accessible or pet-accessible areas.

**Warning:** To the extent consistent with applicable law, seller makes no warranty, expressed or implied, concerning the use of this product other than indicated on this label. Buyer assumes all risk of use and handling of this material when such use and handling are contrary to label instructions.

**Net Weight:** 4 lbs (1.8 kg)

**Directions for Use (Continued from other panel)**

Do not sell this product in individual containers holding less than 4 pounds of bait.

**Selection of Treatment Areas:** Determine areas where rats, mice, or meadow voles will most likely find and consume the bait. Generally, these areas are along walls, by grates, openings, in corners and concealed places, between floor and walls, in or in locations where signs of rodent infestations have been seen. Protect bait from rain and snow. Remove as much alternative food as possible.

**Application Directions:**

- **Rate:** Place 1 to 6 blocks per placement (usually at intervals of 15 to 30 feet) in infested areas. Adjust the amount of bait applied to the level of rodent feeding expected at each bait placement.
- **Use in sewers:** Thread wire through and securely attach to a stationary structure such as the bottom step of a manhole ladder or a sewer grate. Allow just enough wire for the block to rest on manhole benches. If bending is not present, suspend block a few inches above the high water mark or secure block to a board supported by opposing steps of the ladder. Securing block in this manner may inhibit removal by rats or water. Use at least 8 blocks per manhole. Maintain an uninterrupted supply of fresh bait for at least 10 days or until there are no longer any signs of rat activity.
- **Baiting Strategy:** Highest bait consumption is expected to occur on the first day or two after treatment begins. After several days, inspect the placement and replenish bait at sites where there is evidence of heavy feeding or where there is continued evidence of rodent activity.
- **FOLLOW-UP:** Replace contaminated or spoiled bait immediately. Washing waterproof gloves, clothes, and disposal of all dead, exposed animals and leftover bait. To discourage relocation, limit sources of rodent food, water, and harborage as possible. If relocation does occur, repeat treatment. Where a continuous source of infection is present, establish permanent bait stations and replenish them as needed.

**Precautionary Statement**

Hazards to Humans and Domestic Animals:

**CAUTION:** Harmful if swallowed or absorbed through the skin. Keep away from children, domestic animals and pets. Do not get in eyes, on skin or on clothing. All handlers (including applicators) must wear a long-sleeved shirt, long pants, shoes plus socks, and gloves. Any person who retrieves carcasses or unused bait following application of this product must wear waterproof gloves.

**User Safety Requirements:** Follow manufacturer’s instructions for cleaning/maintaining PPE. If no such instructions exist, wash detergent and hot water. Keep and wash PPE separately from other laundry. Remove PPE immediately after handling this product. Wash the outside of gloves before removing them. As soon as possible, wash thoroughly after applying bait and before eating, drinking, chewing gum, using tobacco or using the toilet and change into clean clothing.

**Environmental Hazards:**

This product is extremely toxic to mammals and birds. Ongoing and other predatory and scavenging mammals and birds might be poisoned if they feed upon animals that have eaten this bait. Do not apply directly to water, or to areas where surface water is present or to intervening areas below the mean high water mark. Runoff also may be hazardous to aquatic organisms in water adjacent to treated areas. Do not contaminate water when dispensing of equipment wash water or rinse.

**Not permitted for use against the following species in California:** Cotton rat, Eastern harvest mouse, Golden mouse, Polynesian rat, Window mouse, White-tailed woodrat, Southern plains woodrat, and Mexican woodrat.
