StorOX 2.0

FOR USE IN POST HARVEST WATER TREATMENT APPLICATIONS

KEEP OUT OF REACH OF CHILDREN
DANGER – PELIGRO
Si usted no entiende la etiqueta, busque a alguien para que se la explique a usted en detalle. (If you do not understand this label, find someone to explain it to you in detail.)

ACTIVE INGREDIENT:
Hydrogen Dioxide...............27.00%
Peroxycetic Acid..................2.0%
OTHER INGREDIENTS..............71.00%
TOTAL..........................100.00%

FIRST AID

If in eyes

• Hold eye open and rinse slowly and gently with water for 15-20 minutes.
• Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.
• Call a poison control center or doctor for treatment advice.

If on skin or clothing

• Take off contaminated clothing.
• Rinse immediately with plenty of water for 15-20 minutes.
• Call a poison control center or doctor for treatment advice.

If swallowed

• Call a poison control center or doctor immediately for treatment advice.
• Harmful in a small amount. Never induce vomiting.
• Do not give anything by mouth to an unconscious person.

If inhaled

• Move person to fresh air.
• If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably by mouth-to-mouth, if possible.
• Call a poison control center or doctor for treatment advice.

NOTICE: MUSTูม expended use. Contact your local health or agricultural authority for proper disposal.

PRECAUTIONARY STATEMENTS

HAZARDS TO HUMAN AND DOMESTIC ANIMALS - Corrosive. Causes irreversible eye damage and skin burns. May be fatal if inhaled or absorbed through the skin. Harmful if swallowed. Do not get in eyes, on skin or on clothing. Do not breathe vapor or spray mist. Wear protective eyewear (goggles, face shield, or safety glasses), protective clothing and rubber gloves. Wash thoroughly after handling with soap and water, and before eating or drinking or using tobacco. Remove contaminated clothing and wash clothing before reuse. When spraying or fogging, wear a mask or pesticide respirator jointly approved by the Mine Safety and Health Administration and National Institute for Occupational Safety and Health.

DIRECTIONS FOR USE
It is a violation of federal law to use this product in a manner inconsistent with its labeling. Do not apply this product in a way that will contact workers or other persons, either indirectly or through drift.

Stor Ox 2.0 works best when diluted with water with minimal levels of organic or inorganic materials, and with water having a neutral pH. Thoroughly rinse out tank with water before mixing concentrate. Stor Ox 2.0 will readily mix with clean, neutral water and does not require agitation.

Stor Ox 2.0 concentrate should not be combined or mixed with any other pesticide concentrates.

APPLICATION DIRECTIONS

GENERAL DISINFECTION
Stor Ox 2.0 disinfects as it cleans in one operation. Stor Ox 2.0 can be used to disinfect floors, walls and other hard, non-porous surfaces such as tables, chairs, countertops, bathroom fixtures, sinks, shelves, racks, carts, refrigerators, coolers, glazed tile, and use sites listed on this label made of linoleum, vinyl, glazed porcelain, plastic, polyethylene, stainless steel, or glass. For heavily soiled areas, a pre-cleaning step is required. Prepare a fresh solution for each use.

SURFACE DISINFECTION
Stor Ox 2.0 is an effective disinfectant against gram positive and negative bacteria (vegetative forms). Clavibacter michiganensis Enterobacter aerogenes Escherichia coli Klebsiella pneumoniae Lactobacillus malifermentans Listeria monocytogenes Pediculus danaeusis Proteus vulgaris Pseudomonas aeruginosa Salmonella enterica Salmonella enteritidis Salmonella typhimurium Staphylococcus aureus Streptococcus pyogenes

When used at the disinfectant rate, Stor Ox 2.0 is effective against the following fungi:
Aspergillus fumigatus Aspergillus versicolor Byssochlamys nivea Saccharomyces cerevisiae Trichophyton mentagrophytes

This product may be used in general commercial environments to clean, disinfect and deodorize inanimate hard surfaces:
• Floors, walls, and other non-porous surfaces such as tables, chairs, counter tops, garbage cans, bathroom fixtures, sinks, bed frames, shelves, carts, racks, refrigerators, coolers, and use sites listed on this label made of linoleum, vinyl, glazed porcelain, plastic (such as polyethylene), stainless steel, or glass.
• Packing houses

UNCLEANED SURFACES - SURFACE DISINFECTION
Prepare Stor Ox 2.0 solution by adding 2.5 fl. oz. of the product to 1 gallon of potable water. Remove gross filth from surfaces to be disinfected by cleaning with Stor Ox 2.0 solution by wiping, mopping, or as a coarse spray. Applications involving treatment of food contact surfaces require a sterile or potable water rinse following disinfection.

COMBINATION DISINFECTION AND CLEANING
Use a rate of 1.3 fl. oz. per gallon for hard non-porous surfaces that are lightly soiled or have been pre-rinsed to remove gross contamination. Apply solution with mop, cloth, sponge, brush, scrubber, or coarse spray device or by soaking so as to wet all surfaces thoroughly. Allow to remain wet for 10 minutes, then remove solution and entrapped soil with a clean wet mop, cloth, or wet vacuum pickup. Prepare a fresh solution daily or when it becomes soiled or diluted.

For treating sewer backups and for flood remediation, prepare disinfecting solution of Stor Ox 2.0 by adding 2.5 fl. oz. of the product to 1 gallon of potable water. Remove gross filth from surfaces by cleaning with Stor Ox 2.0 solution by wiping, mopping, or as a coarse spray. Applications involving treatment of food contact surfaces require a sterile or potable water rinse following cleaning. (This application is not approved for use in California)

Foot Bath Mats, Pads, Walk Through Trays
Place foot bath mats, pads or trays at the entrances of all rooms and buildings to prevent cross contamination from area to area in animal containment areas, livestock and dairy quarters, and poultry premises.
1. Prior to use of this product, rinse or brush footwear surfaces to remove gross filth.
2. Make a solution using 1.3 – 2.6 fl. oz. of Stor Ox 2.0 per gallon of water and add to foot bath mat, pad or tray, filling to capacity. Use the higher rate for heavy soil load.
3. Place boots and shoes in the foot bath mat, pad or tray containing the recommended solution of Stor Ox 2.0. Allow surface to remain wet for ten (10) minutes prior to entering next area. Change solution daily or as needed.

For Foaming applications, add 2 - 4 fl. oz. per gallon of water mixed with foaming solution. Follow foaming directions as specified by the manufacturer of the foam generator/erator.

DISINFECTION OF NON-FOOD CONTACT PACKAGING EQUIPMENT
Prior to use of this product, remove gross soil particles from surfaces. Wash with a recommended detergent solution, rinse thoroughly with potable water. For disinfection against beverage spoilage organisms that include Lactobacillus danaeusis, Lactobacillus malifermentans, and Saccharomyces cerevisiae apply 1.3 fl. oz. of Stor Ox 2.0 per gallon of water to surfaces at a temperature of 25 to 45 deg C and allow to remain wet for ten (10) minutes. Allow surfaces to drain thoroughly before operations are resumed.

DISINFECTION OF WATER FILTER MEDIA, MEMBRANES AND RELATED COMPONENTS AND SYSTEMS
Stor Ox 2.0 is an effective disinfectant used for the reduction and removal of bio-organisms on the surfaces of the filter and membrane media, media housings, and related devices and equipment. Stor Ox 2.0 may be used for filter media or related system components or in Clean in Place (CIP) systems.

Disinfection and or treatment of filter media and membrane in potable water systems should be performed when system is NOT in use or online.

Stor Ox 2.0 has been tested for compatibility with a wide range of materials of construction. Stor Ox 2.0 is suitable for use with nonmetallic and metallic piping, valves, pumps and tanks. Long term exposure to concentrate may accelerate corrosion of galvanized steel, brass, bronze or copper. Dirty or moderate to heavy soiled filters and/or membranes should be cleaned in accordance with the manufacturer's guidelines to remove contaminants from the membrane surface.

Stor Ox 2.0 contains a minimum amount of surfactant; additional surfactant can be added to the treatment solution. Contact BioSafe Systems and/or authorized distributor for clarification of additional surfactant compatibility information.

For Curative Treatments:
For filters and/or filtration media, use a rate of 0.25 to 2.5 fl. oz. per gallon (or a rate range of 1.50 – 1.500). Immers the filter and allow to soak for a minimum of ten (10) minutes. Drain filter media and then rinse with clean water. Prior to placing filter back on line, test a sample of the filtrate using BioSafe Systems Test Strips to determine remaining active ingredient levels.

For clean in place (CIP) filters use a rate of 6.4 to 25 fl. oz. per 100 gallons (or a rate range of 1.200 – 1.200). Re-circulate treatment solution through the filter for a minimum of 10 minutes. Upon completion of treatment cycle, flush filter housings and or assembles with clean water. Test sample of water being used to flush filter media with BioSafe Systems Test Strips to determine remaining active ingredient levels.

For treatment of membranes use a rate of 0.25 fl. oz. per gallon (or a rate range of 3.7 - 1.000) with a pH range of 3.7 and maximum water temperature of 80 degrees F. Allow the membranes to soak for a minimum of 10 minutes. Flush or rinse membranes with clean water after treatment. Test flush water with BioSafe Systems Test Strips to determine remaining active ingredient levels.

For treatment membranes in CIP systems use a rate of 6.4 to 25 fl. oz. per 100 gallons (or a rate range of 1.500 – 1.200),
with a pH of 3.7-7 and a maximum water temperature of 80 degrees F. After thorough draining of the solution, rinse the membrane thoroughly with clean water for a minimum of 10 minutes. Test sample of flush water with BioSafe Systems Test Strips to determine remaining active ingredient levels.

To calculate amount of product to be used for CIP systems, identify total volume of all tanks, vessels and piping. Prepare dilution based on sum of all identified tank, vessel and piping volumes.

For Preventative Treatments:
For preventative applications add or inject StorOx 2.0 to water through calibrated metering pump or injector at rates of 1:2000 to 1:10,000. To monitor and maintain the active ingredient level install an ORP sensor and interface with proportioning controller, or take random grab samples and check using BioSafe systems Test Strips.

PACKINGHOUSE DISINFECTION
For Pre-Cleaned Surfaces: Use a rate of 1.3 fl. oz. per gallon for hard non-porous surfaces that are lightly soiled or have been pre-rinsed to remove gross contamination. Apply solution with mop, cloth, sponge, brush, scrubber, or coarse spray device or by soaking so as to wet all surfaces thoroughly. Allow to remain wet for 10 minutes and then remove solution and entrapped soil with a clean wet mop, cloth, or wet vacuum pickup. Prepare a fresh solution daily or when it becomes soiled or diluted.

PACKINGHOUSE DISINFECTION (AGAINST CITRUS CANKER)
StorOx 2.0 is effective against microorganisms such as Xanthomonas campestris (axonopodis) pathovars citrusmelae (citrus canker surrogate). This product can also be used to disinfect surfaces contaminated with P aeruginosa, S enterica and S aureus.

1. Before disinfection, move the equipment into an area with an impervious surface and with controlled drainage. Ensure no disinfection solution will be released into the environment.
2. Remove gross contamination with a cleaner or other suitable detergent and rinse with water.
3. For Xanthomonas campestris (axonopodis) pathovars citrusmelae (citrus canker surrogate), use StorOx 2.0 at a dilution rate of 1:400 – 1:800 as a general coarse spray. For P aeruginosa, S enterica and S aureus, use StorOx 2.0 at a dilution rate of 1:100 (1.3 fl. oz/gal) as a general coarse spray.
4. Allow StorOx 2.0 to contact surface for ten (10) minutes.
5. Allow to dry, do not rinse.

FOOD CONTACT SURFACE SANITIZATION
StorOx 2.0 is an effective sanitizer against bacteria such as Staphylococcus aureus and Klebsiella pneumoniae. StorOx 2.0 may be used in general commercial environments to clean, decontaminate, sanitize, and deodorize inanimate surfaces, such as:

1. Floors, walls, and other non-porous surfaces such as tables, chairs, counter tops, garbage cans/bins, bathroom fixtures, sinks, best frames, shelves, racks, carts, refrigerators, coolers, glazed tile, and use sites listed on this label made of linoleum, vinyl, glazed porcelain, plastic (such as polyethylene), stainless steel, or glass.
2. Parkinghouses, food processing, fresh cut, food distribution and storage, beverage processing facilities, groceries, and hotel retail and wholesale stores. Milling parlors, dairy production and transfer facilities and equipment.
3. Schools, colleges, industrial facilities, dietary areas, office buildings, recreational facilities, retail and wholesale establishment.
4. Animal hospitals, veterinary clinics, animal science laboratories, kennels, kennel runs, cages, feeding and watering equipment, pet shops, zoos, pet animal quarters, poultry premises, trucks, hatcheries and livestock quarters and pens.

Pre-Cleaned Surfaces:
1. Remove gross film with a cleaner or other suitable detergent.
2. Add 0.5 fl. oz. (1:250) of StorOx 2.0 to 1 gallon of potable water.
3. Soak items inw ith diluted solution using mop/wipe, coarse spray or flood techniques and allow contact for at least five (5) minutes. Allow items and/or surfaces to drain adequately or air dry.

FIELD EQUIPMENT SANITIZATION
StorOx 2.0 may be used to sanitize harvest equipment such as pickers, trailers, trucks (including truck body parts and tires), bins, packing crates, ladders, power tools, hand tools, gloves, rubber boots, pruning shears or other equipment that may transfer Xanthomonas campestris (axonopodis) pathovars citrusmelae (citrus canker surrogate). This product can also be used to sanitize surfaces contaminated with P aeruginosa, S enterica and S aureus.

1. Before sanitization, move the field equipment into an area with an impervious surface and with controlled drainage. Ensure no sanitization solution will be released into the environment.
2. Remove gross contamination with a cleaner or other suitable detergent and rinse with water.
3. Use StorOx 2.0 at a dilution rate of 1:50 (1.25 fl oz per gallon of clean water) as a general sanitizing coarse spray.
4. Allow sanitizer to contact surface for at least one (1) minute.
5. Allow to air dry. Do not rinse.

FOOD CONTACT SURFACE SANITIZATION
StorOx 2.0 is an effective sanitizer against bacteria such as Staphylococcus aureus, Salmonella enterica and Escherichia coli. Surfaces to be sanitized include but are not exclusive to non-woven cutting boards, tabletops, trays, pans, racks, platters, cans, vats, tanks.

Pre-Cleaned Surfaces:
1. Prior to sanitizing food contact surfaces, pre-clean by removing gross food particles.
2. Wash with a detergent solution, followed by a potable water rinse.
3. Prepare a solution of StorOx 2.0 by adding 0.5 fl. oz. per gallon of water.
4. Apply the solution to the surface by wiping, mopping with solution or by a coarse spray.
5. Allow to remain on surface for 1 minute, allow to air dry.
SANITIZING FOOD PROCESSING EQUIPMENT

Storox 2.0 is recommended for use on pre-cleaned surfaces such as equipment, pipelines, tanks, vats, fillers, evaporators, pasteurizers and aseptic equipment in dairies, breweries, wineries, beverage and food processing plants. Storox 2.0 is an effective sanitizer for use in the washing, rinsing and sanitizing of conveyors, boxing or packing equipment, peelers, cores, d-biners, scrapers, collators, slicers, driers, knives, saws, etc.

1. Remove all products from equipment unless treating only the return portion of a conveyor.
2. Prepare Storox 2.0 solution by adding 0.5 - 2.5 fl oz for one to 1 gallon of potable water. (1:250 - 1:500). Solutions stronger than 1:250 (0.5 fl oz.) must be followed by a portable or sterile water rinse.
3. Apply sanitizer solution to the return portion of the conveyor or to equipment using a coarse spray or other means of wetting the surfaces. (Treat for at least one (1) minute). Control the volume of solution so as to permit maximum drainage and prevent puddles. The conveyor may still be damp when food contact occurs.
4. Allow equipment to drain adequately before reusing. A dry surface is not required.

PACKINGHOUSE SANITATION

Storox 2.0 is effective against microorganisms such as Xanthomonas campestris (axonopodis) pathovars citrulli (citrus canker surrogate) and Staphylococcus aureus.
1. Remove gross contamination with a cleaner or other suitable detergent and rinse with potable water.
2. Use Storox 2.0 at a dilution of 1:600 as a general sanitizing coarse spray to reduce bacterial and fungal contamination of walls, floors, conveyors and harvesting containers.
3. Allow sanitizer to contact surface for at least one (1) minute.
4. Allow to dry. Do not rinse.

For direct injection into spray waters used in packinghouse process lines and humidification systems, treat water to control Staphylococcus aureus, S. choleraesuis, and P. aeruginosa by injecting Storox 2.0 directly into spray system water with 1.25 fl oz. for every gallon of water. Applicable for use on all types of post harvest commodities.

POST HARVEST APPLICATIONS

Use Storox 2.0 to treat bacterial and fungal diseases in post harvest waters, equipment, structures and on agricultural commodities.

TREATMENT FOR NON-POTABLE WATER SYSTEMS (wash tanks, dip tanks, drench tanks, evaporators, humidification systems and/or storage tanks)

Treat water contacting plant pathogens with 1.5 to 5.4 fl oz. of Storox 2.0 for every 10 gallons of water or use a dilution rate of 1:235 to 1:833. This will provide 1200 to 4255 ppm of Storox 2.0, or 24 to 85 ppm 100% peracetic acid in the use solution.

POST HARVEST SPRAY TREATMENTS ON PROCESS AND PACKING LINES

Inject Storox 2.0 directly into spray, mixing, humidification, fogging and spray bar system make up water on process and packing lines to prevent bacterial and fungal diseases on post-harvest fruits and vegetables. Inject Storox 2.0 at a 1:100 dilution rate to clean water. For best results, where dump tanks are used, make post harvest spray treatment as fruit is leaving dump tanks. Applicable for use on all types of post-harvest commodities. See specific directions for treatment of post harvest potatoes.

FOR DIRECT INJECTION INTO DUMP TANKS, HYDRO COOLERS, SPRAY SYSTEMS AND PROCESS WATERS

For treatment of water containing plant pathogens, inject Storox 2.0 and maintain a predetermined residual level by using metering equipment, coupled with ORP measuring probes. Applicable for use on all types of post harvest fruits and vegetables.
1. Determine biological organic loading prior to treatment if possible.
2. For waters that contain biological and organic loading, inject Storox 2.0 at 25 fl oz. – 12.8 fl oz. of Storox 2.0 for every 100 gallons of water or a dilution rate of 1:500 – 1:1,000.
3. For clean water inject Storox 2.0 at 1.28 fl oz. of Storox 2.0 for every 100 gallons of water or a dilution rate of 1:10,000 to prevent the formation of algae, bacteria and fungi.

Note: In dump tanks that contain commodities with sensitive skin, use a rate of 1.2,000 per 100 gallons of water to prevent oxidation of abrasions that may turn brown.

POST HARVEST SPRAY TREATMENT

Use Storox 2.0 to prevent bacterial and fungal diseases on post-harvest fruits and vegetables. Mix 1.25 fl oz. Storox 2.0 per gallon of clean water. Spray fruit or vegetables to runoff using hydraulic, backpack, air-assisted or other similar sprayer.

DISINFECTING OF POTATO STORAGE AREAS AND EQUIPMENT

This product is an effective disinfectant against the following organisms:
- Aspergillus fumigatus
- Aspergillus versicolor
- C. albicans michiganense (Bacterial Ring Rot)
- Enterobacter aerogenes
- Escherichia coli
- Klebsiella pneumoniae
- Lactobacillus mal fermentans
- Listeria monocytogenes
- Pedicoccus damnosus
- Proteus vulgaris
- Pseudomonas aeruginosa
- Salmonella enterica
- Salmonella enteriditis
- Salmonella typhimurium
- Staphylococcus aureus
- Streptococcus pyogenes

1. Remove all potatoes prior to disinfection of potato storage areas and equipment.
2. Prior to use of this product, remove gross soil particles from surfaces to be treated. For heavily soiled surfaces, a pre-wash is required.
3. Apply 1.3 fl oz of Storox 2.0 per gallon of water with a mop, cloth, sponge, or hand trigger spray so as to wet all surfaces thoroughly.
4. Allow to remain wet with solution for ten (10) minutes.
5. Rinse all treated surfaces thoroughly with potable water before operations are resumed.

BACTERIOSTATIC (Not for use in California)

At 1.3 fl oz. per 1 gallon of water Storox 2.0 is effective at inhibiting the growth of bacteria when used in the presence of 400 ppm hard water and organic soil. Storox 2.0 can be used on floors, walls and other hard nonporous surfaces such as tables, chairs, countertops, bathroom fixtures, sinks, shelves, racks, carts, refrigerators, coolers, tile, and use sites listed on this label made of linoleum, vinyl, glazed porcelain, plastic (such as polypropylene and polyethylene), stainless steel, or glass.

SEWAGE WATER TREATMENT

Use Storox 2.0 for the control of bacteria and the malodors caused by hydrogen sulfide gas. Application rates may vary depending on amounts of organic matter (sewage) in lagoons and pits. Pour Storox 2.0 directly from the container into the pit or lagoon at several locations to aid in dispersal. Use one gallon of Storox 2.0 for 60,000 gallons of sewage (6,000 cubic feet) when using S. choleraesuis, and P. aeruginosa. For best results, disperse Storox 2.0 evenly throughout sewage. Odors should be noticeably reduced in 1-2 weeks. Repeat application when odor reappears. For lagoons, wait 24 hours before adding beneficial bacteria.

TREATMENT OF AGRICULTURAL IRRIGATION WATER AND DRAINAGE DITCHES

Use Storox 2.0 to treat water to suppress control algae, bacteria, fungi and plant pathogenic organisms in agricultural irrigation and drainage water and ditches. For irrigation water, apply 4 to 8 fl oz. of Storox 2.0 per 1,000 gallons of water. Product can be simply added to the body of water.
water, as the residual control will allow for even distribution throughout the water column. Allow solution to disperse for five (5) minutes before irrigating. Apply Storox 2.0 as needed to control and prevent algae growth: apply more often in times of higher water temperatures.

TREATMENT OF AGRICULTURAL IRRIGATION SYSTEMS
Use Storox 2.0 to suppress/control algae, bacteria, fungi and plant pathogenic organisms in drip irrigation systems, center pivot, lateral move, end tow, side wall roll, traveler, solid set/overhead sprinklers, hand move or flood basin irrigation systems. Treat contaminated water at a dilution of 1-5000 to 1-20,000 of Storox 2.0 as needed. Allow solution to disperse for five (5) minutes before irrigating. Refer to Chemigation Directions for Use for specific instructions on using this product through irrigation systems.

CHEMIGATION
General Requirements
1. Apply this product only through a drip system or sprinkler including center pivot, lateral move, end tow, side (wheel) roll, traveler, big gun, solid set, hand move, flood (basin), furrow, border or drip (trickle) irrigation systems. Do not apply this product through any other type of irrigation system.
2. Crop injury, lack of effectiveness, or illegal pesticide residue in crops can result from non-uniform distribution of treated water.
3. If you have questions about calibration, you should contact State Extension Service specialists, equipment manufacturers or other experts.
4. Do not connect an irrigation system (including greenhouse systems) used for pesticide application to a public water system unless the pesticide label-prescribed safety devices for public water systems are in place.
5. A person knowledgeable of the chemigation system and responsible for its operation, or under the supervision of the responsible person, shall shut the system down and make necessary adjustments should the need arise.
6. Posting of areas to be chemigated is required when 1) any part of a treated area is within 300 feet of sensitive areas such as residential areas, labor camps, businesses, day care centers, hospitals, in-patient clinics, nursing homes or any public areas such as schools, parks, playgrounds, or other public facilities not including public roads; or 2) when the chemigated area is open to the public such as golf courses or retail greenhouses.
7. Posting must conform to the following requirements. Treated areas shall be posted with signs at all usual points of entry and along likely routes of approach from the listed sensitive areas. When there are no usual points of entry, signs must be posted in the corners of the treated areas and in any other location affording maximum visibility to sensitive areas. The printed side of the sign should face away from the treated area towards the sensitive area. The signs shall be printed in English. Signs must be posted prior to application and must remain posted until foliage has dried and soil surface water has disappeared. Signs may remain in place indefinitely, as long as they are composed of materials to prevent deterioration and maintain legibility for the duration of the posting period.
8. All signs shall consist of letters at least 2.5 inches tall, and all letters and the symbol shall be a color which sharply contrasts with their immediate background. At the top of the sign shall be the words KEEP OUT, followed by an octagonal stop sign symbol at least 8 inches in diameter containing the word STOP. Below the symbol shall be the words PESTICIDES IN IRRIGATION WATER.

Specific Requirements for Chemigation Systems Connected to Public Water Systems
1. Public water system means a system for the provision to the public of piped water for human consumption if such system has at least 15 service connections or regularly serves an average of at least 25 individuals daily at least 60 days out of the year.
2. Chemigation systems connected to public water systems must contain a functional, reduced-pressure zone, backflow preventer (RPZ) or the functional equivalent in the water supply line upstream from the point of pesticide introduction. As an option to the RPZ, the water from the public water system should be discharged into a reservoir tank prior to pesticide introduction. There shall be a complete physical break (air gap) between the outlet end of the fill pipe and the top or overflow rim of the reservoir tank of at least twice the inside diameter of the fill pipe.
3. The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.
4. The pesticide injection pipeline must contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.
5. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops, or in cases where there is no water pump, when the water pressure decreases to the point where pesticide distribution is adversely affected.
6. Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.
7. Do not apply when wind speed favors drift beyond the area intended for treatment.

Specific Requirements for Sprinkler Chemigation
1. The system must contain a functional check valve, vacuum relief valve and low-pressure drain appropriately located on the irrigation pipeline to prevent water source contamination from backflow.
2. The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.
3. The pesticide injection pipeline must also contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.
4. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops.
5. The irrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.
6. Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.
7. Do not apply when wind speed favors drift beyond the area intended for treatment.

Specific Requirements for Flood (Basin), Furrow and Border Chemigation
1. Systems using a gravity flow pesticide dispensing system must meter the pesticide into the water at the head of the field and downstream of a hydraulic discontinuity such as a drop structure or weir box to decrease potential for water source contamination from backflow if water flow stops.
2. The systems utilizing a pressurized water and pesticide injection system must meet the following requirements:
   a. The system must contain a functional check valve, vacuum relief valve and low-pressure drain appropriately located on the irrigation pipeline to prevent water source contamination from backflow.
   b. The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.
3. The pesticide injection pipeline must also contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.
4. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops.
5. The irrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.
6. Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being filled with a system interlock.

Application Instructions

1. Remove scale, pesticide residues, and other foreign matter from the chemical supply tank and entire injection system. Flush with clean water. Failure to provide a clean tank, void of scale or residues may cause product to lose effectiveness or strength.
2. Determine the treatment rates as indicated in the directions for use and make proper dilutions.
3. Prepare a solution in the chemical tank by filling the tank with the required water and then adding product as required. The product will immediately go into suspension without any required agitation.
4. Do not apply StorOx 2.0 in conjunction with any other pesticides or fertilizers; this has the potential to cause reduced performance of the product. Avoid application in this manner.

STORAGE AND DISPOSAL
Do not contaminate water, food, or feed by storage or disposal.

PESTICIDE STORAGE: Store in original containers in a cool, well-ventilated area, away from direct sunlight. Do not allow product to become overheated in storage. This may cause increased degradation of the product, which will decrease product effectiveness. In case of spill, flood area with large quantities of water. Do not store in a manner where cross-contamination with other pesticides or fertilizers could occur.

PESTICIDE DISPOSAL: Pesticide wastes are acutely hazardous. Improper disposal of excess pesticide, spray mixture, or rinseate is a violation of Federal Law. If these wastes cannot be disposed of by use according to label directions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste Representative at the nearest EPA Regional Office for guidance.

CONTAINER DISPOSAL (Containers equal to or less than 5 gallons): Nonrefillable container. Do not reuse or refill this container. Triple rinse container (or equivalent) promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank. Fill the container 1/4 full with water and recoup. Shake for 10 seconds. Pour rinseate into application equipment or a mix tank or store rinseate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Then offer for recycling if available or puncture and dispose of in a sanitary landfill, or by incineration. Do not burn, unless allowed by state and local ordinances.

CONTAINER DISPOSAL (Containers greater than 5 gallons): Nonrefillable container. Do not reuse or refill this container. Triple rinse container (or equivalent) promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank. Fill the container 1/4 full with water. Replace and tighten closures. Tip container on its side and roll it back and forth, ensuring at least one complete revolution for 30 seconds. Suction the container on its end and tip it back and forth several times. Empty the rinseate into application equipment or a mix tank or store rinseate for later use or disposal. Repeat this procedure two more times. Then offer for recycling if available or puncture and dispose of in a sanitary landfill, or by incineration. Do not burn, unless allowed by state and local ordinances.

CONDITIONS OF SALE AND LIMITATION OF WARRANTY AND LIABILITY

NOTICE: Read the entire Directions for Use and Conditions of Sale and Limitation of Warranty and Liability before buying or using this product. If the terms are not acceptable, return the product at once, unopened, and the purchase price will be refunded.

The Directions for Use of this product should be followed carefully. It is impossible to eliminate all risks inherently associated with the use of this product. Crop injury, ineffectiveness or other unintended consequences may result because of such factors as manner of use or application, weather or crop conditions, presence of other materials or other influencing factors in the use of this product, which are beyond the control of BIOSAFE SYSTEMS LLC or Seller. All such risks shall be assumed by Buyer and User, and Buyer and User agree to hold BIOSAFE SYSTEMS and Seller harmless for any claims relating to such factors.

BIOSAFE SYSTEMS warrants that this product conforms to the chemical description on the label and is reasonably fit for the purposes stated in the Directions for Use, subject to the inherent risks referred to above when used in accordance with directions under normal use conditions. This warranty does not extend to the use of the product contrary to label instructions, or under abnormal conditions or under conditions not reasonably foreseeable to or beyond the control of Seller or BIOSAFE SYSTEMS, and Buyer and User assume the risk of any such use. BIOSAFE SYSTEMS MAKES NO WARRANTIES OF MERCHANTABILITY OR OF FITNESS FOR A PARTICULAR PURPOSE, NOR ANY OTHER EXPRESSED OR IMPLIED WARRANTY EXCEPT AS STATED ABOVE.

In no event shall BIOSAFE SYSTEMS or Seller be liable for any incidental, consequential or special damages resulting from the use or handling of this product. THE EXCLUSIVE REMEDY OF THE USER OR BUYER, AND THE EXCLUSIVE LIABILITY OF BIOSAFE SYSTEMS AND SELLER FOR ANY AND ALL CLAIMS, LOSSES, INJURIES OR DAMAGES INCLUDING CLAIMS BASED ON BREACH OF WARRANTY, CONTRACT, NEGLIGENCE, TORT, STRICT LIABILITY OR OTHERWISE RESULTING FROM THE USE OR HANDLING OF THIS PRODUCT, SHALL BE THE RETURN OF THE PURCHASE PRICE OF THE PRODUCT OR, AT THE ELECTION OF BIOSAFE SYSTEMS OR SELLER, THE REPLACEMENT OF THE PRODUCT.
