outside of gloves before removing. As soon as possible wash thoroughly and change into clean clothing. Discard tobacco, or using the toilet. Users should remove clothing/PPE immediately if pesticide gets inside. Then wash chemical-resistant footwear, socks, and chemical-resistant gloves (barrier laminate butyl rubber, nitrile rubber, respirator with an organic vapor (OV) cartridge or canister with any N, R, P, or HE prefilter. When mixing, loading, or sewage systems without previously notifying the local sewage treatment plant authority. For guidance, contact your State permitting authority has been notified in writing prior to discharge. Do not discharge effluent containing this product to any water, food or feed by storage and disposal. Do not apply this product in a way that will contact workers or other persons. Do not allow to freeze.

PESTICIDE DISPOSAL
Do not dispose of this product, or its container, or rinsate washwater or rinseout water containing this product, in any manner inconsistent with Federal law or with the labeling instructions. For proper disposal of pesticide formulations, contact your local distributor or Environmental Control Agency, or the Hazardous Waste representative of the nearest EPA Regional Office for guidance.

CONTAINER DISPOSAL
Do not re-use or re-fill this container. Triple rinse or pressure rinse container (or equivalent) promptly after emptying. Then offer for recycling or reconditioning, or dispose of in a sanitary landfill, or by procedures approved by state and local authorities.

NOTE
Seller warrants that this product conforms to the chemical description on the label and is reasonably fit for the purposes stated on the label when used in strict accordance with the directions. SELLER DISCLAIMS ALL OTHER EXPRESS OR IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR ANY OTHER EXPRESS OR IMPLIED WARRANTY.

DIRECTIONS FOR USE

Pesticide formulations, including insecticide, fungicide and rodenticide use, are intended for use in controlling insects and other pests. They may be applied directly to the area to be treated or used in equipment such as insecticide sprayers, or other devices designed to apply the product. When applying pesticides, use personal protective equipment (PPE) appropriate for the task. Wash your hands thoroughly with soap and water after handling pesticides.

PRECAUTIONARY STATEMENTS

HAZARDS TO HUMANS AND DOMESTIC ANIMALS

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. This product is toxic in the effective presentation in most aquatic compartments. The concentration range of its specific protection response depends on several factors. These include the susceptibility of the system to microbial degradation, the extent to which microorganisms can be inhibited, the type of pesticide introduced, pH, temperature, and the extent of the activity for which protection is needed. For protection against bacterial attack, a concentration of 0.02 to 0.25% product is almost invariably sufficient. The control of mold growth, particularly on paper products of high acidic content, may occasionally require dietary doses of above 0.05%. In fluid systems, spoilage is usually controlled with dosages not greater than 0.09%. Do not use at concentration greater than 0.5%.

Typical applications, and the suggested range of concentrations on which trials can be based are:

Refer to the table at the end of this section for recommended dose rates.

Detergent Concentrates, detergent solutions, including rosin dispersions, starch and casein based products.

Typical applications, and the suggested range of concentrations on which trials can be based are:

Refer to the table at the end of this section for recommended dose rates.

It is not possible to give precise recommendations as to the quantity of this product to add to control slime formation, because the magnitude of the problem varies greatly from mill to mill, depending on the furnish employed, the cleanliness of the system where it is known that slime deposits accumulate. For protection against fungal activity, which is less likely to occur when the shock dosing method is used.

If this preferred method is adopted, add 2.5 to 9 ounces of this product for each ton of paper produced per day as a single shock dose. The actual quantity to be used depending on the severity of the slime problem. This addition may be made to any part of the stock preparation or mixing process. Add the product continuously for either the single period of 8 hours during the curing operation or treat hides or skins with an appropriately diluted agent and/or thickeners such as starch, guar, or xanthan gum. It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

As soon as possible wash thoroughly and change into clean clothing. Discard tobacco, or using the toilet. Users should remove clothing/PPE immediately if pesticide gets inside.
