LOROX® DF
SUPPLEMENTAL LABELING

FOR DISTRIBUTION AND USE ONLY WITHIN THE STATE OF WASHINGTON

LOROX® DF
EPA Reg. No. 61842-23
EPA SLN No. WA-110005

• It is a violation of Federal law to use this product in a manner inconsistent with its labeling.
• This labeling must be in the possession of the user at the time of application.
• Follow all applicable directions, restrictions, Worker Protection Standard requirements, and precautions on the EPA registered label.

DIRECTIONS FOR USE

Crop Rotation Directions (Following Lorox DF use in Carrots grown to maturity):
• Any crop registered for the rate of linuron that was applied may be replanted immediately.
• Application of linuron made between January and September: Barley, Bean (snap), Corn (field and sweet), Oat, Pea (green), Potato, Rye, Triticale, and Wheat may be planted 4 months after application.
• Application of linuron made between October and December: Barley, Bean (snap), Corn (field and sweet), Oat, Pea (green), Potato, Rye, Triticale, and Wheat may be planted 6 months after application.
• All crops not listed above may be planted 12 months after application of linuron.

Note - Crop injury may occur if shorter crop rotation intervals are used in areas with insufficient rainfall or irrigation.

Restrictions / Precautions:
• Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 24 hours.
• This pesticide is toxic to fish and aquatic invertebrates. Lorox DF should not be used under this SLN Label where impact on listed threatened or endangered species is likely. You may refer to the WSDA Endangered Species Program web site at http://agr.wa.gov/PestFert/NatResources/EndangSpecies.aspx, or contact the Washington Department of Fish & Wildlife, National Marine Fisheries Service (NOAA Fisheries) or U.S. Fish & Wildlife Service for information regarding aquatic species listed as threatened or endangered. Consult the federal label for additional restrictions and precautions to protect aquatic organisms.
• This chemical is known to leach through soil into ground water under certain conditions as a result of agricultural use. Use of this chemical in areas where soils are permeable, particularly where the water table is shallow, may result in ground water contamination.

• Linuron may contaminate surface water through spray drift or under certain conditions, from surface water runoff into adjacent surface water bodies (ponds, lakes, streams, etc.) For several weeks post-application, linuron has a high potential to runoff when applied to fields with any of the following conditions: sloping land draining into nearby surface waters; very poorly to somewhat poorly drained soils; areas with extremely shallow ground water; frequently flooded areas; fields with surface water canals or ditches; and highly erodible land cultivated with poor management practices.

WSDA Container Disposal Guidance:
• Completely empty the contents of the pesticide container into application equipment and apply to a labeled crop or site. The empty container may be disposed of in a sanitary landfill. Burning is not a legal method of container disposal in Washington.

This label for Lorox DF expires and must not be distributed or used in accordance with this SLN registration after December 31, 2016.
