THIRTY PLUS

DIRECTIONS FOR USE

It is a violation of Federal Law to use this product in a manner inconsistent with its labeling. Thirty Plus is a preservative for hay that is baled at 16% to 30% moisture. It can be used on alfalfa, Bermuda grass, bluegrass, bromegrass, clover, cowpea hay, fescue, lespedeza, lupines, orchard grass, peanut hay, rye grass, soybean hay, sultan grass, timothy, and vetch that is baled in small square, large round, or large square bales. When used in accordance with label directions, it will prevent the growth of mold in the hay and related heating, discoloration, and loss of feed value.

This product may only be used during the baling process if appropriate baling equipment in use prevents exposure of non-target organisms to this pesticide product. Do not apply to pre-harvest hay and straw, cut hay and straw in the field prior to baling, or to hay and straw after it has been baled. Apply product to the hay and straw as it is fed into the baler, using the rates on this label. The baler application equipment must prevent dripage and drift and must function properly and be used/maintained in accordance with the manufacturer's written operation instructions.

FOR USE ON HAY: Spray Thirty Plus on the hay as it is fed into the baler using the application rates indicated by the chart below.
