ALLIGARE
FLUROXYPYR
HERBICIDE

For Use on on-farm non-cropland, conservation reserve program acres.
Non-Crop land areas including industrial sites, non-irrigation ditch banks, rights
of way such as electrical power lines, communications lines, road sides and rail-
roads including grazed areas within these sites and pine plantations

ACTIVE INGREDIENT(S): BY WT.
Fluoroxypr: 1-methylheptyl ester: [(4-amino-3,5-dichloro-2-fluoro-2-pyridyl)oxy]acetic acid, 1-methylheptyl ester……………………………………46.50%
OTHER INGREDIENTS: …………………………………………………………53.50%
TOTAL:……………………………………………………………………………100.00%
Contains Petroleum Distillate.

EPA Reg. No. 65330-365-61927

KEEPS OUT OF REACH OF CHILDREN
CAUTION / PRECAUCIÓN

Si usted no entiende la etiqueta, busque a alguien para que se la explique a usted en
detalle. (If you do not understand this label, find someone to explain it to you in detail.)

See label booklet for First Aid, Precautionary Statements and Directions for Use
including Storage and Disposal Instructions.

Manufactured for: Alligare, LLC
13 N. 8th Street • Capiilla, AL 36801

Net Contents:

☐ 1 Quart (.946 liters) ☐ 1 Gallon (3.79 liters) ☐ 2.5 Gallons (9.46 liters)
ALLIGARE FLUROXYPYR HERBICIDE

For Use on non-crop land, conservation reserve program acres.
Non-Crop land areas including industrial sites, non-irrigated ditch banks, rights of way such as electrical power lines, communications lines, road sides and railroads including grazed areas within these sites and pine plantations.

ACTIVE INGREDIENT(S):  
Fluoroxypr 1-methylpropyl ester: (6-amino-3,5-dichloro-6-fluoro-2-pyridyl)oxyacetic acid, 1-methylpropyl ester .......................... 45.50%  
OTHER INGREDIENT(S) ......................................................... 54.50%  
TOTAL: ............................................................................ 100.00%

Add Equivalent: Fluoroxypr: 6-amino-3,5-dichloro-6-fluoro-2-pyridyl)oxyacetic acid - 31.25% (2,8 oz/gal).

Contains Petroleum Distillates.

PERSONAL PROTECTIVE EQUIPMENT (PPE)
Some materials that are chemical-resistant to this product are listed below. If you want more options, follow the instructions for Category A on an EPA chemical-resistance category selection chart.

Applicators and other handlers must wear:
• Long-sleeved shirt and long pants
• Chemical-resistant gloves (Category A) made of materials such as butyl rubber ≥14 mils, natural rubber ≥14 mils, neoprene rubber ≥14 mils, or nitrile rubber ≥14 mils
• Shoes plus socks
• Protective eyewear

Discard clothing and other absorbent materials that have been drenched or heavily contaminated with this product's concentrate. Follow manufacturer's instructions for cleaning/maintaining PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry.

ENGINEERING CONTROLS STATEMENTS
When handlers use closed systems, enclosed cages, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides (40 CFR 170.240 (d) (4-6)), the handler PPE requirements may be reduced or modified as specified in the WPS.

USER SAFETY RECOMMENDATIONS
USERS SHOULD: Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet. Remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing. Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

ENVIRONMENTAL HAZARDS
This product is toxic to fish. Do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. Do not apply when weather conditions favor drift or runoff from treated areas or to areas where surface water is present or to intertidal areas below the mean high water mark. Do not apply when weather conditions favor drift or runoff from treated areas or to areas where surface water is present or to intertidal areas below the mean high water mark. Do not contaminate water when disposing of equipment wash waters. Do not allow sprays to drift onto adjacent desirable plants.
PHYSICAL OR CHEMICAL HAZARDS
Do not use or store near heat or open flame.

DIRECTIONS FOR USE
It is a violation of Federal law to use this product in a manner inconsistent with its labeling.
Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application.
For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.
Important: Read these entire DIRECTIONS FOR USE and the WARRANTY AND DISCLAIMER statement before using this product.

AGRICULTURAL USE REQUIREMENTS
Use this product only in accordance with its labeling and with the Worker Protection Standard, 49 CFR part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry intervals. The requirements in this box only apply to users of this product that are covered by the Worker Protection Standard.
Do not allow worker entry into treated areas during the restricted entry interval (REI) of 24 hours.

PPE required for entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water is:
- Coveralls
- Chemical-resistant gloves (Category A) made of materials such as butyl rubber ≥14 mils, natural rubber ≥14 mils, neoprene rubber ≥14 mils, or nitrile rubber ≥14 mils
- Shoes plus socks
- Protective eyewear
NON-AGRICULTURAL USE REQUIREMENTS
The requirements in this box apply to uses of this product that are NOT
within the scope of the Worker Protection Standard for Agricultural Pesticides
(40 CFR Part 170). The WPS applies when this product is used to pro-
duce agricultural plants on farms, forests, nurseries, or greenhouses.

Entry Restrictions for Non-WPS Users: When applied to on-farm non-crop
land, keep unprotected persons out of treated areas until sprays have dried.

PRODUCT INFORMATION
ALLIGARE FLUROXYPYR HERBICIDE is a selective herbicide for control of
annual and perennial broadleaf weeds including Kochia, Smartweed (Eraso),
common sunflower, volunteer flax and volunteer potato on-farm non-crop
land, non-crop land areas including industrial sites, non-irrigation ditch banks, rights
of way, pine plantations and conservation reserve program (CRP).

SPRAY ADJUVANTS
Generally, this product does not require the use of an adjuvant to achieve satis-
factory weed control when applied alone. However, the addition of an adju-
vant may optimize herbicidal activity when applications are made (a) at lower
carrier volumes, (b) under conditions of high temperatures, low relative humid-
ity or drought, or (c) to small, heavily pubescent Kochia. Adjuvants may be used
when required by a tank mix partner. Follow all applicable directions on the
label for the tank mix partner.

When an adjuvant is to be used with this product, Alligare, LLC recommends the
use of a Chemical Producers and Distributors Association (CPDA) certified
adjuvant.

SPOT TREATMENTS AND HAND-HELD SPRAYERS
To prevent misapplication, spot treatments should be applied with a calibrated
boom or with hand sprayers according to the directions below.

Hand-held or backpack sprayers may be used for spot application of ALLIG-
ARE FLUROXYPYR HERBICIDE if care is taken to apply the sprays uniformly
and at a rate equivalent to a broadcast application. Application rates in the
table are based on an area of 1,000 sq ft. The amount of ALLIGARE FLUROX-
YPYR HERBICIDE (oz or ml) in the table should be mixed with 1 gallon or
more of water and applied to an area of 1,000 sq ft. To calculate the amount of product required for larger areas, multiply the table value (ll oz or ml) by the area to be treated in "thousands" of square feet, e.g., if the area to be treated is 5,000 sq ft, multiply the table value by 5 (calc. 5,000/1000 = 5).

** Includes herbicide tolerant or resistant biotypes.

APPLICATION TO ON-FARM NON-CROPLAND

Apply as a single broadcast treatment or spot treatment to control susceptible broadcast weeds in on-farm areas such as fencerows, building perimeters, around irrigation equipment and on-farm private roadways. Apply at a rate of 0.4 to 0.7 oz/A when weeds are actively growing, but before weeds are 6 inches tall or vining. Spot treatments should be applied at rates and spray volumes equivalent to broadcast application. See Instructions for "Spot Application" above.
APPLICATION TO CONSERVATION RESERVE PROGRAM (CRP) ACRES

Do not use on CRP acres that are underseeded with desirable legumes, clovers, or other sensitive broadleaf plants.

ALLIGARE FLUROXYPR HERBICIDE may be applied to CRP acres. For best results, apply as a single broadcast post emergence treatment using ground equipment or by air to control susceptible broadleaf weeds. Apply at a rate of 0.4 to 0.7 pt A when weeds are small and actively growing, but before weeds are 8 inches tall or wilting. Spot treatments should be applied at rates and spray volumes equivalent to broadcast application. See instructions for "Spot Application" above.

Restriction: Grazing or haying of treated CRP acres is prohibited.

NON-CROPLAND AND PINE PLANTATIONS
(Includes industrial sites, non-irrigation ditch banks, and rights of way such as electrical power lines, communication lines, pipelines, roadways and railroads including grazed areas within these sites.)

</tbody>
</table>

1. Includes herbicide tolerant or resistant biotypes.
2. Use the higher rate in the range to control these weeds.
3. For control of larger kochia at more advanced stages of growth, increase the rate per acre of ALLIGARE FLUROXYPYR HERBICIDE to 0.8 to 1.1 pt/A or tank mix with 2-4 qts/A of 2,4-D and 1-2 qts/A of methylated seed oil.

Use Restrictions:
- Do not apply more than 1.4 pt/A (0.5 lb. ai/A) per year.
• Do not make more than one treatment per crop per year.
• Preharvest Interval: Do not apply within 14 days of harvest.
• Do not apply ALLIGARE FLUROXYPYR HERBICIDE to trees less than 4
  years-old.
• Do not apply ALLIGARE FLUROXYPYR HERBICIDE during bloom.

Precautions for use in Pine Plantations
Do not apply ALLIGARE FLUROXYPYR HERBICIDE to pine plantations as an
over-the-top broadcast treatment during active terminal growth (from initiation
of bud break/growth flush until seasonal terminal growth has hardened off and
over wintering buds have formed). Directed spray applications may be made
in pine plantations during period of active growth, but care should be taken
to avoid spray contact with actively growing foliage.

Do not apply ALLIGARE FLUROXYPYR HERBICIDE in tank mix combination
to pine plantations unless the tank mix product is labeled for weed or brush
control in pines by the application method being employed.

Apply at broadcast rate of 0 to 22 fl oz/A when weeds are small and/or actively
growing. Soil application of ALLIGARE FLUROXYPYR HERBICIDE may be
made during a single year, provided the total amount of ALLIGARE FLUROX-
YPYR HERBICIDE applied does not exceed the maximum label rate of 22 fl
oz/A. See listing of weeds controlled or suppressed at end of General Informa-
tion Section.

Spot treatments should be applied at rates and spray volumes equivalent to
broadcast application. See instructions for "spot application".

Brush Control: ALLIGARE FLUROXYPYR HERBICIDE may be tank-mixed
with Triclopyr 4, Triclopyr 3A, Glyphosate 4+, Glyphosate 5A, Picloram 22C or
Picloram+ 2,4-D at indicated rates to increase control of pine species, pines
oak, red maple, red oak, and other woody species.

GROUND APPLICATION
Apply in a spray volume of greater than 8 gallons/acre (or greater than 80
liters/ha) at 30 to 50 psi to ensure proper weed coverage. Flat fan nozzles
of 80 or 110 degrees are recommended for optimum coverage. Nozzles may
be oriented 45 degrees forward to enhance crop penetration and to give better
weed coverage. Use screens that are 50-mesh or larger. Do not use controlled droplet application equipment, hollow cone-type insecticide or other nozzles that produce a fine-droplet spray pattern. A drift control or spray thickening agent may be used with this product to improve spray deposition and minimize the potential for spray drift. If used, follow all the use directions and precautions on the product label.

**AERIAL APPLICATION**

Apply in water using a minimum spray volume of 3 gallons/acre (or 30 liters/hectare). For best results, use a minimum of 5 gallons/acre (or 60 liters/hectare) under dry conditions or heavy weed infestations. Use nozzles that provide 200 to 350 micron size droplets for best results and to insure uniform spray coverage. Aerial applications with ALLIGARE FLUROXYPYR HERBICIDE should be made with low drift nozzles at a maximum height of 10 feet above the crop and at a maximum pressure of 30 psi. Do not apply aerially when wind speed is greater than 10 mph. Do not allow spray to drift onto adjacent crops as injury or loss may occur.

Non-Cropland Areas, Including Rights of Way (Helicopter Only): In non-cropland, do not apply this product with fixed wing aircraft. Pine Plantations: Both fixed wing and helicopter equipment may be used to apply this product on pine plantations, but fixed wing aircraft require additional drift mitigation measures.

To minimize spray drift apply ALLIGARE FLUROXYPYR HERBICIDE in a total spray volume of 3 or more gallons per acre using spray. Drift potential is lowest between wind speeds of 2 to 10 MPH. However, many factors including droplet size and equipment determine drift potential at any given speed. Application should be avoided below 2 mph due to variable wind direction and high potential for temperature inversions. Spray drift from aerial applications can be minimized by applying a coarse spray as per USDA – ARS/PAWS or nozzle manufacturer's guidelines or by using straight stream nozzles directed straight back. Do not operate using a spray boom longer than 75% of wing span or 65% of rotor width. For fixed wing aircraft, maximum speed during application is limited to 140 mph and application height above the vegetation canopy should not exceed 10 ft.

See the "SPRAY DRIFT MANAGEMENT" section of this label for additional
information on how to reduce drift during aerial application.

ALLIGARE FLUROXYPYR HERBICIDE TANK MIXTURES- All Uses (Except Non-Crops)

Read and follow all manufacturers' label recommendations for any herbicides, fungicides, and/or insecticides tank mixed with ALLIGARE FLUROXYPYR HERBICIDE. If those recommendations conflict with this label, do not tank mix that product with ALLIGARE FLUROXYPYR HERBICIDE. Read and follow all label instructions on timing, precautions, and warnings for any tank mix product. Follow the most restrictive labeling.

TANK MIXING PRECAUTIONS:
• Read carefully and follow all applicable use directions, precautions, and limitations on the respective product labels.
• Do not exceed labeled application rates. Do not tank mix with another pesticide product containing the same active ingredient as this product unless the label of either tank mix partner specifies the maximum dosages that may be used.
• For products packaged in water-soluble packaging, do not tank mix with products containing boros or mix in equipment previously used to apply products containing boros unless the tank and spray equipment has been adequately cleaned.
• Always perform a jar test to insure the compatibility of products to be tank mixed.

TANK MIX COMPATIBILITY TESTING
Perform a jar test prior to tank mixing to ensure compatibility of ALLIGARE FLUROXYPYR HERBICIDE and other pesticides, fertilizers or carriers. Use a clear glass quart jar with lid and mix the tank mix ingredients (including water) in their relative proportions. Invert the jar containing the mixture several times and observe the mixture for approximately 30 minutes. If the mixture bails-up, forms flakes, sludge, or forms oily films, layers, or other precipitates, it is not compatible and the tank mix combination should not be used.

#### MIXING INSTRUCTIONS

Fill the spray tank with water to 1/4 to 1/2 of the required volume. Start agitation. Add different formulation types in order indicated, allowing time for complete mixing and dispersion after addition of each.

1. Add dry flowable or wettable powder tank mix products.
2. Add aqueous suspensions, flowables or liquids
3. Maintain agitation and fill spray tank to 3/4 of the total spray volume and then add ALLIGARE FLUROXYPYR HERBICIDE and other emulsifiable concentrates and any solutions.
4. Add any required adjuvants
5. Finish filling the spray tank

Maintain continuous agitation during mixing, final filling and throughout application. If spraying and agitation must be stopped before the spray tank is empty, the materials may settle to the bottom. Settled materials must be re-suspended before spraying is resumed. Settled material may be more difficult to re-suspend than when originally mixed. Agitate spray tank every 12 hours to re-suspend any settled materials. Repeat until spraying can resume and the spray tank is empty.

SPRAY EQUIPMENT
For specific application equipment, refer to the manufacturer's recommendations for additional information on GPA, pressure, speed, nozzle types and arrangements, nozzle heights above the target canopy, etc.

Be sure to calibrate air or ground equipment properly before application. Select a spray volume and delivery system that will ensure thorough coverage and a uniform spray pattern with minimum drift. Use higher spray volumes to obtain better coverage when crop canopy is dense. Avoid swath overlapping, and shut off spray boom while starting, turning, slowing, or stopping, to avoid injury to the crop. Do not make applications using equipment and/or spray volumes or during weather conditions that might cause spray to drift onto non-target sites.

For additional information on spray drift refer to the "SPRAY DRIFT MANAGEMENT" section of this label.

SPRAYER CLEANUP
The spray equipment must be cleaned before ALLIGARE FLUROXYPYR HERBICIDE is sprayed. Follow the cleanup procedures specified on the labels of the previously applied products. If no directions are provided, follow the steps outlined below.

It is recommended that during periods when multiple loads of ALLIGARE FLUROXYPYR HERBICIDE are applied, at the end of each day of spraying,
the interior of the tank be rinsed with fresh water and then partially filled, and
the boom and hoses flushed. This will prevent the buildup of dried pesticide
deposits, which can accumulate in the application equipment.

Clean sprayer using the following procedures:
   1. Drain the tank and thoroughly rinse spray tank, boom and hoses with clean
water especially all visible deposits.
   2. Fill the tank with water and add household ammonia to make a 1% w/v solu-
tion (1 gal/100 gal). Flush the hoses, boom and nozzles with the cleaning
solution. Circulate for at least 10 minutes. Flush hoses, boom and nozzles
once more and then drain the tank.
   3. Clean nozzles and screens in a separate container using the 1% w/v solu-
tion of ammonia and water.
   4. Repeat Step 2.
   5. Rinse tank and flush boom and hoses with clean water.

Do not clean sprayer near desirable vegetation, wells or other water sources:
   1. Dispose of all irrigate in accordance with pertinent regulations.
   2. Check tank mix partner label for any additional clean-up procedures.

SPRAY DRIFT MANAGEMENT
Avoiding spray drift at the application site is the responsibility of the applicator. The
integration of many equipment and weather-related factors determine the poten-
tial for spray drift. The applicator and the grower are responsible for considering all
these factors when making decisions.

The following drift management requirements must be followed to avoid off-tar-
target drift movement from aerial applications to agricultural field crops. These
requirements do not apply to forestry applications, public health uses or to
applications using dry formulations.

The distance of the outer most nozzles on the boom must not exceed 3/4 the
length of the wingspan or rotor.

Nozzles must always point backward, parallel with the air stream and never be
pointed downwards more than 45 degrees.

When applying ALLIGARE FLUROXYPYR HERBICIDE in a tank mix with
other herbicides (e.g. 2,4-D, bromoxynil, dicamba, MCPA, sulfonylurea herbi-
...
In eastern Washington, observe all applicable Washington State Department of Agriculture herbicide rules.

The applicator should be familiar with and take into account the information covered in the SPRAY DRIFT MANAGEMENT section.

**Information On Droplet Size**

The most effective way to reduce drift potential is to apply large droplets. The best drift management strategy is to apply the largest droplets that provide sufficient coverage and control. Applying larger droplets reduces drift potential, but will not prevent drift if applications are made improperly or under unfavorable environmental conditions (see Wind, Temperature and Humidity, and Temperature Inversions).

**Controlling Droplet Size**

*Volume* — Use high flow rate nozzles to apply the highest practical spray volume. Nozzles with higher rated flows produce larger droplets.

*Pressure* — Do not exceed the nozzle manufacturer’s recommended pressures. For many nozzle types, lower pressure produces larger droplets. When higher flow rates are needed, use higher flow rate nozzles instead of increasing pressure.

*Number of Nozzles* — Use the minimum number of nozzles that provide uniform coverage.

*Nozzle Orientation* — Orienting nozzles so that the spray is released parallel to the airstream produces larger droplets than other orientations and is the recommended practice. Significant deflection from horizontal will reduce droplet size and increase drift potential.

*Nozzle Type* — Use a nozzle type that is designed for the intended application. With most nozzle types, narrower spray angles produce larger droplets. Consider using low-drift nozzles. Solid stream nozzles oriented straight back produce the largest droplets and the lowest drift.

*Boom Length* — For some spray patterns, reducing the effective boom length to less than 3/4 of the wingspan or rotor length may further reduce drift without reducing swath width.
Application Height
Applications should not be made at a height greater than 10 feet above the top of the largest plants unless a greater height is required for aircraft safety. Making applications at the lowest height that is safe reduces exposure of droplets to evaporation and wind.

Swath Adjustment
When applications are made with a crosswind, the swath will be displaced downwind. Therefore, on the up and downwind edges of the field, the applicator must compensate for the displacement by adjusting the path of the aircraft upward. Swath adjustment distance should increase, with increasing drift potential (higher wind, smaller drops, etc.)

Wind
Drift potential is lowest between wind speeds of 2 to 10 mph. However, many factors, including droplet size and equipment type determine drift potential at any given speed. Application should be avoided below 2 mph due to variable wind direction and high inversion potential. NOTE: Local terrain can influence wind patterns. Every applicator should be familiar with local wind patterns and how they affect spray drift.

Temperature and Humidity
When making applications in low relative humidity, set up equipment to produce larger droplets to compensate for evaporation. Droplet evaporation is most severe when conditions are both hot and dry.

Temperature Inversions
Applications should not occur during a temperature inversion because drift potential is high. Temperature inversions restrict vertical air mixing, which causes small suspended droplets to remain in a concentrated cloud. This cloud can move in unpredictable directions due to the light variable winds common during inversions. Temperature inversions are characterized by increasing temperatures with altitude and are common on nights with limited cloud cover and light to no wind. They begin to form as the sun sets and often continue in the morning. Their presence can be indicated by ground fog; however, if fog is not present, inversions can also be identified by the movement of smoke from a ground source or an aircraft smoke generator. Smoke that layers and moves laterally in a concentrated cloud (under low wind conditions) indicates an inversion.
sion, while smoke that moves upward and rapidly dissipates indicates good vertical air mixing.

**RESISTANCE MANAGEMENT**

Any weed population may contain or develop plants naturally resistant to a herbicidal mode of action. Resistant biotypes may eventually dominate the weed population if herbicides with an identical mode of action are used repeatedly in the same field and weed control may fail. The use of ALLIGARE FLUROXYPYR HERBICIDE should conform to resistance management strategies established for the use area. Consult your agricultural advisor for resistance management strategies and recommended pest management practices for your area.

**PRECAUTIONS AND RESTRICTIONS**

Injury to or loss of adjacent sensitive crops, desirable trees, or vegetation may result from failure to observe the following:

- Do not apply directly to, or otherwise come in contact with susceptible crops or desirable plants including but not limited to: allilus, canola, cotton, lettuce, edible beans, grapes, lentils, mustard, peas, potatoes, radishes, soybeans, sugar beets, sunflower, tomatoes or tobacco.
- Do not apply, drain or flush equipment on or near desirable trees or other plants or on areas where their roots may extend, or in locations where the chemical may be washed or moved in to contact with their roots.
- Do not use on lawns, walks, driveways, tennis courts, or similar areas. Prevent drift of spray to desirable plants.
- Take all necessary precautions to avoid all direct or indirect contact (such as spray drift) with non-target plants or areas.
- Do not contaminate irrigation ditches or water used for domestic purposes.
- Carefully observe all sprayer cleanup instructions both prior to and after using this product, as spray tank residues may damage crops other than those listed on this label.
- Do not apply this product through any type of irrigation system.
- Frost before application (3 days) or shortly after (3 days) may reduce weed control and crop tolerance.

**Use Precautions and Restrictions: Non Crop**

- Do not contaminate irrigation ditches or water used for domestic purposes
- Maximum application Rate: 22 oz per acre of ALLIGARE FLUROXYPYR.
HERBICIDE per year

- Grazing restrictions: There are no grazing restrictions for livestock, including lactating or non-lactating dairy animals.
- Harvest Restrictions: Do not harvest grass for hay or silage from treated areas within 7 days of application.
- Slaughter restrictions: Meat animals must be withdrawn from treated forage at least 2 days before slaughter.
- Chemigation: Do not apply this product through any type of irrigation system.
- In Arizona: The state of Arizona has not approved this product for use on plants grown for agricultural/commercial production, such as designated grazing grass.
- Management of Kochia Biotypes: Research has suggested that many biotypes of kochia can occur within a single population. While kochia biotypes can vary their susceptibility to ALLURE FLUROXYPYR HERBICIDE as will be suppressed or controlled at 12 oz per acre provided application timing and growing conditions are optimal. Application of ALLURE FLUROXYPYR HERBICIDE at rates of less than 6 fl oz per acre can result in a shift to more tolerant biotypes within a population.
- Avoid applications where proximity of susceptible plants or other desirable plants is likely to result in exposure to spray or spray drift.
STORAGE AND DISPOSAL

Do not contaminate water, food, or feed by storage or disposal.

Pesticide Storage: Store in a dry place above 10°F or warmer and supervise before use to ensure any crystallization that may have occurred re-dissolves. Prevent cross contamination with other pesticides, fertilizers, food, and feed. Store in original container and out of reach of children, preferably in a locked storage area.

Handle and open container in a manner as to prevent spillage. Dispose of pesticide as directed below. In spill or leak incidents, keep unauthorized people away. For help with any spill, leak, fire or exposure involving this material, call day or night CHEMTREC (800) 424-8802 or (TDD) 267-2837 in calling from outside of U.S.

Pesticide Disposal: Pesticide wastes are toxic. Improper disposal of excess pesticide, spray mixture or rinsates is a violation of Federal Law. If these wastes cannot be disposed of by use according to label instructions, consult your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

CONTAINER DISPOSAL

Rigid, Non-refillable containers small enough to shake (i.e., with capacities equal to or less than 5 gallons).

Non-refillable container. Do not reuse or refill this container. Triple rinse or pressure rinses container (or equivalent) promptly after emptying. Offer for recycling, if available.

Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container 1/4 full with water and recap. Shake for 10 seconds after the flow begins to drip. Repeat this procedure two more times.

Pressure rinse as follows: Empty the remaining contents into application equipment or a mix tank and continue to drain for 10 seconds after the flow begins to drip. Hold container upside down over application equipment or mix tank and collect rinsate for later use or disposal. Insert pressure rinsing nozzle in the side of the container, and rinse at about 40 PSI for at least 30 seconds. Drain for 10 seconds after the flow begins to drip.

Once container is rinsed, offer for recycling if available, or puncture and dispose of in a sanitary landfill.
Warranty and Disclaimer Statement
The directions for use of this product are believed to be adequate and must be followed carefully. However, it is impossible to eliminate all risks associated with the use of this product. Such risks may arise from weather conditions, soil factors, off-target movement, unconventional farming techniques, the presence of other materials, the manner of use or application, or other unknown factors, all of which are beyond the control of Alligare, LLC ("Alligare"), and can cause crop injury, injury to non-target crops or plants, ineffectiveness of the product, or other unintended consequences. All such risks shall be assumed by the user or buyer.

Alligare warrants that this product conforms to the chemical description on the label and is reasonably fit for the purposes stated in the Directions for Use, subject to the inherent risks described above, when used in accordance with the directions for use under normal conditions. This warranty does not extend to the use of this product contrary to label instructions or under conditions not reasonably foreseeable to Alligare, and is subject to the inherent risks described above.

TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, ALLIGARE DISCLAIMS ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, ALLIGARE, MANUFACTURER, AND SELLER DISCLAIM AND SHALL NOT BE LIABLE FOR ANY SPECIAL, INCIDENTAL, INDIRECT, OR CONSEQUENTIAL DAMAGES RESULTING FROM THE USE, HANDLING, APPLICATION, STORAGE, OR DISPOSAL OF THIS PRODUCT OR FOR DAMAGES IN THE NATURE OF PENALTIES, AND THE USER AND BUYER WAIVE ANY RIGHT THAT THEY MAY HAVE TO SUCH DAMAGES. NO AGENT, REPRESENTATIVE OR EMPLOYEE OF ALLIGARE IS AUTHORIZED TO MAKE ANY WARRANTY, GUARANTEE OR REPRESENTATION BEYOND THOSE CONTAINED HEREIN OR TO MODIFY THE WARRANTIES CONTAINED HEREIN.

TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, THE EXCLUSIVE REMEDY OF THE USER OR BUYER, AND THE TOTAL LIABILITY OF ALLIGARE, MANUFACTURER, AND SELLER, SHALL BE LIMITED TO THE PURCHASE PRICE PAID, OR AT ALLIGARE'S ELECTION, THE REPLACEMENT OF THE PRODUCT.
