Agricultural Commodities Bulk storage of raw grains such as corn, soybeans, coca beans and peanuts. For control of stored product insects including Almond Moths, Coffee Moths, Indian Meal Moths, and Mediterranean Flour Moths infesting non-perishable bulk-stored raw agricultural commodities. Calculate cubic feet of air space above the commodity to determine the number of strips required for treatment. Treat in early Spring before moths begin to emerge. Replace strip when needed to prevent egg laying by moths. Hang strips so as not to impede air circulation. When multiple strips are required, distribute them uniformly over the treated space.

Animal Buildings Occupied by People for Less than 4 Hours Per Day Controls flies, mosquitoes and gnats in horse barns, calf parlors, hog parlors, stables, poultry houses, tack rooms and dog kennels. Do not contaminate food, water or foodstuffs. DO NOT contaminate milk or milking equipment.

Enclosed Utility Boxes To control Fire Ants, Wasps and other Insects as listed which commonly infest utility enclosures, cabinet conduits, junction boxes, and enclosed electrical panels. Remove from sealed bag and hang or stand so air can contact all sides of the strip. One strip treats 900 to 1200 cubic feet. Record installation date and replace when effectiveness diminishes.

Trash Dumpsters For control of flies in garbage dumpers, attach strip (One strip treats 900 to 1200 cu. ft.) inside dumpster. Keep lid on dumpster closed.

Catch Basins To control mosquitoes breeding in catch basin, suspend one 65 g strip about ten inches above water level. Usual control lasts 10 to 15 weeks.

If about equal to an average room 10' x 13' with an 8-foot ceiling, use up to four (4) months. In a larger room, if more than one strip is required, keep them at least 10 feet apart. Record the date of installation so that the old strip may be replaced with a new, fresh, full-strength strip at the end of the four (4) month period or when effectiveness diminishes.
